CLO-2 :	*Able to Understand and apply the various numerical methods for vibration analysis of three degree of freedom systems*	*1*	*75*	*70*	*H*	*M*	*M*	*H*	*L*	*L*	*M*	*L*	*L*	*L*	*L*	*L*			
CLO-3 :	*Able to learn the concepts of vibration analysis of continuous systems*	*1*	*75*	*70*	*H*	*M*	*M*	*L*	*M*	*L*	*M*	*L*	*L*	*L*	*L*	*L*			
CLO-4 :	*Able to apply the knowledge of numerical integration methods in vibration analysis*	*1*	*75*	*70*	*H*	*M*	*M*	*L*	*M*	*L*	*M*	*L*	*L*	*L*	*L*	*L*			
CLO-5 :	*Able to Understand the vibration measurement devices and condition monitoring techniques*	*1&2*	*75*	*70*	*H*	*H*	*M*	*M*	*H*	*L*	*H*	*L*	*L*	*M*	*L*	*M*			
CLO-6:	*Able to understand the vibrations of two, multi degree of freedom systems and continuous sytems and apply the knowledge of numerical integration methods in vibration analysis and vibration measuring devices in field measurement.*	*1&2*	*75*	*70*	*H*	*H*	*M*	*M*	*H*	*L*	*H*	*L*	*L*	*M*	*L*	*L*			

		Vibrations of Two degree of freedom systems / Module 1	Vibrations of Three Degree of freedom systems / Module 2	Vibrations of Continuous systems Numerical Integration Methods in Vibration Analysis / Module 3	Numerical Integration Methods in Vibration Analysis / Module 4	Vibration Measuring Instruments / Module 5
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to vibration terminologies and multidegree of freedom systems*	*Equation of Motion for free undamped three degrees of freedom systems using Newton's Method, Orthogonality Condition*	*Transverse Vibrations of String or a cable*	*Introduction to Finite Difference method*	*Vibration Measuring Devices – Transducer, Vibrometer*
S-2	SLO-1	*Equation of Motion for free undamped two degrees of freedom systems using Newton's method*	*Multidegree of freedom systems – Matrix method , Eigen Value Method – Eigen values and Eigen vector*	*Longitudinal vibrations of a Bar or a Rod*	*Central difference method for single degree of freedom systems*	*Vibration Measuring Devices – Accelerometer and Seismometer.*
S-3	SLO-1	*Equation of Motion for free undamped two degrees of freedom systems using Lagrangian energy method*	*Tutorials on Multidegree of freedom systems – Newton's Method, Matrix method , Eigen Value Method*	*Tutorials on Transverse Vibrations of Strings and Longitudinal vibrations of Rods*	*Central difference method for multi degree of freedom systems*	*Tutorials on vibrometer, Accelerometer and Seismometer.*
S-4	SLO-1	*Tutorials on free undamped two degrees of freedom systems using Newton's method and Lagrangian method*	*Influence Coefficients Method – Stiffness and Flexibility matrix – spring mass system*	*Torsional vibrations of rods*	*Tutorials on central difference method*	*Frequency Measuring devices – Single Reed, Multi reed and stroboscope.*

S-5	SLO-1	*Determine the natural frequencies and mode shapes for coordinate coupling*	*Dunkerly's Method for closed coupled system , Rayleigh's Method for spring mass system*	*Lateral Vibrations of a Beam*	*Runge-Kutta Method for single degree of freedom systems*	*Vibration exciters*
S-6	SLO-1	*Concept of Linear undamped vibration absorber*	*Tutorials on Influence Coefficients Method, Dunkerly's Method and Rayleigh's Method*	*Tutorials on Torsional vibration of rods and lateral vibration of a Beams*	*Runge-Kutta Method for multi degree of freedom systems*	*Tutorials on vibration exciters.*
S-7	SLO-1	*Tutorials on coordinate coupling and Linear undamped vibration absorber*	*Concept of Holzer's Method for Far Coupled systems and Close Coupled Sytems*	*Rayleigh's method for continuous system*	*Tutorials on Runge-Kutta Method*	*Experimental Modal Analysis, Condition Monitoring techniques*
S-8	SLO-1	*Torsional Vibration of Two rotor systems.*	*Torsional Vibration of Three rotor systems-Equivalent Length Determination*	*Rayleigh's Ritz method for continuous system*	*Finite Difference Methods for Longitudinal vibration of bars*	*Balancing Machines – Single plane and two plane balancing*
S-9	SLO-1	*Torsional Vibration of Geared Systems with Two rotor System*	*Tutorials on Hozler's method and Three rotor systems.*	*Tutorials on Rayleigh's method and Rayleigh's Ritz method*	*Finite Difference Methods for transverse vibration of beams*	*Tutorials on Modal analysis*

							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	PSG Design Data book		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Understand and analyze thesurfaces and friction*
CLR-2 :	*Understand and analyze the wear mechanisms*
CLR-3 :	*Understand and analyze the film theory*
CLR-4 :	*Understand and analyze the lubricants and lubrication phenomenon*
CLR-5:	*Understand and analyze the surface engineering processes and select suitable materials for bearing*
CLR-6:	*Understand and solve various engineering problems*

Course Learning Outcomes (CLO):	At the end of the course, student will be able to:	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Understand friction and engineering surfaces*	1,&2	100	85	H	H			H		H					H	H		
CLO-2 :	*Apply the knowledge and analyze the failure occurred due to various types of wear*	3&4	100	85	H	H	H	H	H		H					H	H		
CLO-3 :	*Apply the knowledge of lubrication to provide solutions*	3&4	100	85	H	H	H	H	H							H	H		
CLO-4 :	*Analyze various surface conditions and provide new ideas of surface protection techniques*	3&4	100	85	H	H	H	H	H							H	H		
CLO-5:	*Formulate new materials*	5	100	85	H	H										H	H	H	H
CLO-6:	*Investigate the failure of a system*	5	100	85	H	H			H	H						H	H	H	H

		Surfaces and friction	Wear	Film lubrication theory	Lubricants and lubrication	Surface engineering and materials for bearings
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to the concept of tribology, Tribological problems*	*Introduction, background of Wear and Types of Wear with applications.*	*Introduction to Viscosity and its importance in lubrication.*	*Types of lubricants and their properties*	*Introduction to surface engineering*
S-2	SLO-1	*Nature of engineering surfaces, Surface topography*	*Abrasive wear*	*Influence of various particles on viscosity of a lubricant.*	*Stribeck Curve and its importance*	*Surface treatments*
S-3	SLO-1	*Surface profilometer, measurement of surface topography; importance of roughness parameters*	*Adhesive wear*	*Fluid film in simple shear, Viscous flow between very close parallel plates.*	*Boundary and Mixed Lubrication regime*	*Coatings and cladded plates*
S-4	SLO-1	*Contact between surfaces, Sources of sliding Friction, Friction characteristics of metals and non-metals*	*Wear due to corrosion*	*Shear variation within the film, Lubricant supply, lubricant low rate.*	*Hydrodynamic lubrication*	*In situ formed tribo films*
S-5	SLO-1	*Friction due to ploughing, Friction due to adhesion*	*Fatigue and fretting wear*	*Cold jacking, Couette flow,*	*Elasto hydrodynamic lubrication(EHL); Problems on EHL*	*Surface Texturing*
S-6	SLO-1	*Sources of rolling friction, Stick slip motion*	*Wear in metals*	*Cavitations, film rupture and oil whirl*	*Importance of film thickness, Lambda ratio*	*Tribo corrosion*
S-7	SLO-1	*Friction of ceramic materials*	*Wear in polymers*	*Petroff's equation*	*Bio degradable lubricants*	*Surface analysis techniques*
S-8	SLO-1	*Friction of polymers*	*Wear of ceramics*	*Reynolds equation*	*Nano lubricants*	*Materials for bearings*
S-9	SLO-1	*Measurement of friction*	*Measurement of wear, Ferrography and oil analysis*	*Sommerfield Number*	*Hertzian contact and problems on Hertizian contacts*	*Condition monitoring*

Course Learning Rationale (CLR):	The purpose of learning this course is to:	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
CLR-1 :	*Performthe kinematic analysis of various mechanisms and linkages*	Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLR-2 :	*Synthesis a linkage or mechanism for the given requirements*																		
CLR-3 :	*Determine the acceleration at any point on the coupler*																		
CLR-4 :	*Perform static and dynamic force analysis of linkages*																		
CLR-5 :	*Perform kinematic analysis and synthesis of spatial mechanisms and Robot linkages*																		
CLR-6 :	*Design a mechanism according to the need and analyze it.*																		
Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*																		
CLO-1 :	*Determine the position, velocity and acceleration of simple and complex linkages.*	*1,2 &3*	*75*	*65*	*H*	*H*	*M*	*M*	*H*	-	-	-	-	-	-	*L*			
CLO-2 :	*Synthesize a linkage based on the given working conditions*	*1,2 &3*	*75*	*65*	*H*	*H*	*H*	*H*	*H*	-	-	-	-	-	-	*L*			
CLO-3 :	*Find the conjugate points, radius of curvature and acceleration at any point on the coupler link.*	*1,2 &3*	*75*	*65*	*H*	*H*	*M*	*H*	*H*	-	-	-	-	-	-	*L*			
CLO-4 :	*Find forces/moments in various links with or without considering inertia of links*	*1,2 &3*	*75*	*65*	*H*	*H*	*H*	*M*	*H*	-	-	-	-	-	-	*L*			
CLO-5 :	*Determine the position, velocity and acceleration of spatial linkages and robot linkages*	*1,2 &3*	*75*	*65*	*H*	*H*	*H*	*H*	*H*	-	-	-	-	-	-	*L*			
CLO-6 :	*Do the kinematic and dynamic analysis of mechanisms in addition to its synthesis.*	*1,2 &3*	*75*	*65*	*H*	*H*	*H*	*H*	*H*	-	-	-	-	-	-	*L*			

		Kinematic Analysis of Mechanisms	Kinematic Synthesis of Linkages	Path Curvature Theory	Force Analysis of Mechanisms	Kinematics of Spatial Mechanisms And Robotics
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Review of fundamentals of kinematics, mobility analysis and classifications of mechanisms*	*Introduction to synthesis, type, number and dimensional synthesis*	*Fixed and moving centrodes*	*Static force analysis of linkages*	*Mobility and description of spatial mechanisms*
S-2	SLO-1	*Kinematic Inversions, Grashoff's law*	*Two position synthesis of four bar and slider crank mechanisms by extreme position and inversion methods*	*Determination of radius of curvature of coupler points by Hartmann's Construction*	*Static force analysis of linkages by graphical method, principle of super position*	*Position, velocity and acceleration analysis of spatial mechanisms by vector algebra method*
S-3	SLO-1	*Mechanical advantage and Transmission angle*	*Three position synthesis of four bar by inversion method*	*Determination of radius of curvature of coupler points by the Euler- Savary equation*		
S-4	SLO-1	*Position analysis of four bar, Slider Crank by complex and vector algebra methods*	*Three position synthesis of slider crank mechanisms by inversion method*	*Inflection Points, The Inflection Circle*	*Dynamics force analysis- D'Alembert's principle*	*Problems on kinematic analysis of spatial mechanisms*
S-5	SLO-1	*Velocity, acceleration and jerk analysis of four bar by complex and vector algebra methods*	*Four position synthesis by point position reduction method and Overlay method.*	*The collineation axis and Bobiller's theorem*	*Combined static and dynamics analysis of four bar linkage, Graphical and analytical methods*	*Kinematic synthesis of spatial mechanisms*
S-6	SLO-1	*Velocity, acceleration and jerk analysis of Slider Crank by complex and vector algebra methods*	*Coupler curve synthesis*	*Determination of radius of curvature of coupler points by Bobiller's Construction*	*Problems on combined static and dynamic analysis*	*Introduction to Robot kinematics, Topological arrangements of robotic arms, Eulerian angles, DH parameters*
S-7	SLO-1	*Velocity analysis of complex and six bar linkages by relative velocity method (Graphical method)*	*Analytical Methods of synthesis by Blotch's Synthesis*	*Problems on Bobiller's Construction*	*Shaking force and shaking couple*	*Kinematic analysis of robot manipulators using transformation matrices*
S-8	SLO-1	*Acceleration analysis of complex and six bar linkages by relative velocity method (Graphical method)*	*Analytical Methods of synthesis by Freudestien's Method*	*Problems on Bobiller's Construction*	*Introduction to force and moment balancing of linkages*	*Inverse kinematics of robot manipulators*

S-9	SLO-1	*Problems on velocity and acceleration of mechanisms by Graphical method*	*Cognate linkages by the Roberts – Chebyshev theorem*	*The cubic Stationary curvature - Ball's Point*	*Problems on Balancing of linkages*	*Robot actuator force analysis*

Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Find the approximate solution of boundary value problems*
CLR-2 :	*Know the variationaland Weighted residual approaches to solve differential equations*
CLR-3 :	*Develop basic finite element concepts and solution procedure*
CLR-4 :	*Formulatetheelement stiffness and mass matrices for various one and two dimensional elements*
CLR-5 :	*Formulate the element heat conductance and convection matrices one dimensional element*
CLR-6 :	*To formulate and solve problems in solid mechanics, Eigen Value and heat transfer using finite element method.*

		Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Solve the differential equations using weighted residual and variational approaches.*	*1,2&3*	*75*	*65*	*H*	*H*	*L*	*H*	*M*	-	-	*L*	*L*	-	-	*M*			
CLO-2 :	*Solve the structural analysis problems, such as bar, truss and beam using 1D element.*	*1,2 &3*	*70*	*65*	*H*	*H*	*L*	*H*	*M*	-	-	*L*	*L*	-	-	*M*			
CLO-3 :	*Analysis of two-dimensional structural problems on plane triangular and quadrilateral elements.*	*1,2 &3*	*70*	*65*	*H*	*H*	*L*	*H*	*M*	-	-	*L*	*L*	-	-	*M*			
CLO-4 :	*Be able to solve Eigen Value problems in solid mechanics using finite element method.*	*1,2 &3*	*65*	*65*	*H*	*H*	*L*	*H*	*M*	-	-	*L*	*L*	-	-	*M*			
CLO-5 :	*Be able to solve one dimensional heat transfer problems using finite element method*	*1,2 &3*	*70*	*65*	*H*	*H*	*H*	*H*	*H*	-	-	*L*	*L*	-	-	*M*			
CLO-6	*Analyze structural and heat transfer problems using Finite Element*	*1,2 &3*	*65*	*60*	*H*	*H*	*M*	*M*	*M*	-	-	*L*	*L*	-	-	*M*			

		Introduction to FEA	1D Linear Static Analysis	2D Linear Static Analysis	Dynamic Analysis of Structures	1D Heat Transfer Problems
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Basics of FEA, Historical background, applications of FEA in engineering, modelling of discrete and continuum models*	*Finite element procedure for a continuum problem, discretization, types of elements*	*Introduction to twodimension elasticity, plane stress and strain conditions*	*Dynamic analysis, Formulation-Hamilton's Principle, lumped and consistent mass models*	*Review of fundamentals of heat Transfer*
S-2	SLO-1	*Variational problems, Euler'sequation*	*Selection of interpolation function, shape function, derivation of element stiffness matrix for a one dimensional bar element*	*Constant strain triangular element, Area coordinate system, shape function, strain displacement matrix*	*Derivation of lumped and consistent mass matrices for axial bar element, formulation of eigen value problem*	*Governing equations and boundary conditions for Heat transfer*
S-3	SLO-1	*Rayleigh-Ritz method, minimum potential energy,Example problem, solving differential equation*	*assembly of elements, imposing boundary conditions, calculation of element stress, example problems*		*Determination of natural frequencies and normal mode shapes of axial vibration*	*Derivation of conductance matrix for steady state 1D heat conduction*
S-4	SLO-1	*Weighted residual approaches, collocation method, subdomain method, Galerkinmethod and least square method*	*Tutorial Problems on axial loading of bars*	*Derivation of element stiffness matrix for a CST element*	*Problems onnatural frequencies and normal mode shapes of axial vibration*	*Tutorial on Steady state 1D heat conduction*
S-5	SLO-1	*Example problem, solving differential equations using weighted residual approaches*	*Local and global coordinate systems*	*Tutorial on two dimensional plate problems with CST elements*	*Derivation of lumped and consistent mass matrices for beam element*	
S-6	SLO-1	*Galerkin's Finite Element method for solving differential equations, example problems, comparison of results with different methods*	*Analysis of truss, coordinate transformations, Derivation of the stiffness matrix*	*LST and four noded quadrilateral elements, isoparametric formulation*	*Determination of natural frequencies and normal mode shapes of beam*	*Derivation of element matrix for steady state 1D heat conduction including convection*

S-7	SLO-1	*Spring element, formulation of stiffness matrix, assembly procedure for global stiffness matrix, applying boundary conditions*	*Assembly of stiffness matrix for a truss, Tutorial Problems on Trusses*	*Gaussian quadrature Integration- Derivation of one point and two point formula*	*Determination of natural frequencies and normal mode shapes of beam*	*Tutorial on Steady state 1D heat conduction with convection*
S-8	SLO-1	*Solution of linear algebraic equations, Gauss elimination method, Cholesky decomposition, example problems*	*Beam element, Hermite shape functions, derivation of element stiffness matrix of a beam element.*	*Problems using Gaussian quadrature with one and two points*	*Problemson eigen value problems on beams*	*Solution of simple Heat Transfer 1-D and 2-D steady state problems using a FEA software*
S-9	SLO-1	*Tutorial problems on springs with series and parallel combinations*	*Calculation of load vector for point, uniform distributed and varying loads on beams*	*Lagrange interpolation functions for serendipity family elements*	*Derivation of lumped and consistent mass matrices for a CST element*	*Introduction to transient heat transfer problems*

Course Code	18MEE306T	Course Name	ADVANCED STRENGTH OF MATERIALS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC106T Mechanics of Solids	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Be able to Compute the combined effect of deformation/loading arising out of different causes as applied to structural members made of linear, homogeneous, isotropic material so as to be able to predict (as part of a different course) failure of components/sub-systems of a product*
CLR-2 :	*Be able to Compute the effect of deformation/loading in straight and curved beams (a class of primary structural member) subjected to bending (a type of primary loading)*
CLR-3 :	*Be able to Study the effect of bending (a type of primary loading) deformation/load as applied to flat thin plates (a class of primary structural member)*
CLR-4 :	*Be able to Study the use of energy methods in structural analysis as an alternative means of solving a structural mechanics problem*
CLR-5 :	*Be equipped with analytical skills the learning process of which has a bearing in professional practice in understanding difference(s) between exact and approximate solution procedures*
CLR-6 :	*Be able to analyze effects of typical loadings on primary structural members using approximate or exact methods as applicable*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO – 3
CLO-1 :	*Perform 2D & 3d stress and strain transformation and arrive at maximum values for normal and shear stresses and find the planes on which these stresses act*	*1, 2*	*90*	*75*	*H*	*H*													
CLO-2 :	*Determine i)bending stress in straight beams (due to unsymmetrical bending), ii) transverse shear stresses in straight beams and locate shear center for specified cross-sections, and iii) circumferential (bending) stresses in curved beams*	*1, 2*	*90*	*75*	*H*	*H*													
CLO-3 :	*i)Derive expressions for displacement/strains, stresses, and moments, ii) derive (using these expressions) the governing equation for bending of flat rectangular and axi-symmetric circular plates. Use the expressions for computing these parameters in specified cases*	*1,2*	*90*	*75*	*H*	*H*													
CLO-4 :	*Compute strain energy due to various loadings and using it to determine deflection*	*1,2*	*90*	*75*	*H*	*H*													
CLO-5 :	*Understand the primary difference between theory of elasticity and mechanics of materials approaches and solve plane stress, torsional, and rotating disk problems*	*1,2*	*90*	*75*	*H*	*H*													
CLO-6 :	*Determine displacements, strains, and stresses related to primary structural members*	*1,2*	*90*	*75*															

		Stress & Strain Theory	Bending of Straight & Curved Beams	Bending of flat thin plates	Energy Methods	Theory of Elasticity & Its Applications
Duration (hour)		9	9	9	9	9
S-1	SLO-1	Introduction – course overview, Equilibrium, compatibility, and constitutive relations in macroscopic form, Definition of stress at a point in 3D, representation on an element and sign convention	BendingStresses in beams (initially straight) due to symmetrical loading – review and definition of un-symmetrical bending	Introduction to flat plates – definition of a plate, rectangular and axi-symmetric circular plates, thin vs thick plates, comparison with beams (1D) as a structural member (2D), typical real-world applications. Linear vs non-linear bending – definition. Derivation of governing equation for bending of a flat, thin, rectangular plate – outline of procedure	Work, Strain energy definition for linear, perfectly elastic materials; strain energy due to - uniaxial stress, additional normal stresses in other perpendicular directions, shear stress	Introduction to and comparison with mechanics of materials approach, definition of Plane stress and plane strain linear elastic problems

S-2	SLO-1	concept of a tensor (in relation to a scalar and a vector), 2D stress transformation in Cartesian coordinate system using direction cosines	Bending stresses in beams due to un-symmetrical bending (plane of loading not coinciding with plane of symmetry, even if it exists) – explanation of theory in decoupling the problem into sub-problems using the concept of principal axes and moments of inertia	definition of strains, stresses, and moments and use of these parameters in derivation of governing equation for plate bending (based on Kirchhoff theory) – use of strain-displacement, and stress-strain relations	strain energy due to - general state (3D) of stress, plane stress	Plane stress and plane strain linear elastic problems - Airy's stress function in rectangular coordinates – derivation of the biharmonic equation
S-3	SLO-1	3D stress transformation in Cartesian coordinate system using direction cosines	Application of theory in computing bending stresses and determination and location of neutral axis	Use of equilibrium equations and completion of derivation of governing equation; specification of different boundary conditions generally used – simply supported, clamped, free	Total strain energy in bars with simple loading conditions – axial loading, torsional loading of a solid circular bar, and transverse loading	simple problems related to bending of beams using Airy's stress function in rectangular coordinates
S-4	SLO-1	principal stresses in 3D (after a quick review in 2D)	Deflection due to unsymmetrical bending; Intro to shear center, determination of shear center for a symmetrical channel section	Solution due to sinusoidal bending load on a simply supported plate– step-by-step explanation	Castigliano's 1st theorem, example problems	Additional problems related to bending of beams using Airy's stress function
S-5	SLO-1	Numerical problems (in 2D and 3D based on the above lectures)	determination of shear center for T, unequal I sections	Numerical problems on thin, flat rectangular plates	brief overview of material non-linearity and plasticity;The complementary energy theorem, and Castigliano's 2nd theorem,	overview of torsion of rectangular cross section structural members, Prandtl stress function for torsion, derivation of Poisson's equation (using Prandtl stress function)
S-6	SLO-1	octahedral normal and shear stresses, definition of strain based on small-displacement theory and strain tensor in Cartesian coordinate system	intro to bending of curved beams	Derivation of governing equation for bending of a flat, thin, axi-symmetric circular plate – outline of procedure - definition of strains, stresses, and moments	example problems using Castigliano's 1st& 2ndtheorems (for linear materials)	Membrane analogy, brief discussion of torsion of rectangular cross section
S-7	SLO-1	strain transformation and principal strains in 3D for linear, homogeneous, isotropic material	Derivation of circumferential stress expression	use of strain-displacement, stress-strain, and equilibrium relations in derivation of governing equation (for bending)	Rayleigh's method, example problem of beam bending deflection	torsional stress in hollow closed thin-walled (single cell) tubes – overview and expressions for shear stress and angle of twist
S-8	SLO-1	Numerical problems on 3D strain computation, transformation, and determination of principal strains	Numerical problems on determination of circumferential stresses (rectangular and square sections)	derivation of equations for displacement, support reactions, and maximum stresses for a uniformly loaded, simply supported circular plate	Rayleigh-Ritz method applied to beams in bending	Stresses due to rotation - Radial and tangential stresses in a disc of uniform thickness – derivation of expression for the stresses due to rotation at a constatnt angular speed; maximum stresses
S-9	SLO-1	equilibrium and compatibility relations in differential form, boundary conditions and St. Venant's principle	Additional numerical problems on determination of circumferential stresses (rectangular and square sections); a brief intro (only) to radial stresses in curved beams	Numerical problems on bending of flat, thin, axi-symmetric circular plates	problems based on Rayleigh-Ritz method	Problems related to computation of Radial and tangential stresses in a rotating disc of uniform thickness based on the previous lecture

Duration (hour)		09	09	09	09	09s
S-1	SLO-1	*Global Trends Analysis and Product decision: Types of various trends affecting product decision -Social Trends(Demographic, Behavioral, Psychographic ,*	*Requirement Engineering: Types of Requirements (Functional, Performance, Physical ,Regulatory, Economical, Behavioral);*	*Conceptualization: Industrial Design and User Interface Design*	*System Integration, Testing, Certification and Documentation: Manufacturing/Purchase and Assembly of Systems*	*Sustenance: Maintenance*
S-2	SLO-1	*Economical Trends(Market, Economy, GDP, Income Levels,Spending Pattern, target cost, TCO), Technical Trends(Technology,Applications, Tools, Methods)*	*Types of Requirements (, Technical, Stakeholder, Environmental, Industry specific, Internal-Company Specific)*	*Introduction to Concept generation Techniques*	*Integration of Mechanical, Embedded and S/W systems;*	*Sustenance: Repair; Enhancements.*
S-3	SLO-1	*Environmental Trends(Environmental Regulations and Compliance), Political/Policy Trends,(Regulations, Political Scenario, IP Trends and Company Policies);PESTLE Analysis*	*Requirement Engineering (Gathering (VOC)*	*Concept Screening & Evaluation - Concept Design*	*Introduction to Product verification processes and stages - Industry specific (DFMEA)*	*Product EoL: Obsolescence Management*
S-4	SLO-1	*Introduction to Product Development Methodologies and Management: Overview of Products and Services (Consumer product, Industrial product, Specialty products etc)*	*Analysis (QFD)*	*S/W Architecture, Hardware Schematics and simulation*	*Introduction to Product verification processes and stages - Industry specific (FEA, CFD)*	*Configuration Management; EoL Disposal.*
S-5	SLO-1	*Types of Product Development (NPD/ Re-Engineering (Enhancements, Cost Improvements)/ Reverse Engineering*	*Design Specification*	*Detailed Design: Component Design and Verification*	*Introduction to Product validation processes and stages Industry specific (Sub-system Testing/ Integration Testing*	*The Industry: Engineering Services Industry - overview; PLM,Product development in Industry versus Academia*
S-6	SLO-1	*Design Porting & Homologation);*	*Traceability Matrix and Analysis*	*High Level Design/Low Level Design of S/W Programs, S/W testing;*	*Introduction to Product validation processes and stages Industry specific (Functional Testing/ Performance Testing / Compliance Testing*	*The IPD Essentials: Introduction to vertical specific product development processes*

S-7	SLO-1	*Overview of Product Development methodologies (Over the Wall/ Waterfall/ V-Model/ Stage-Gate Process/ Spiral/Systems Engineering/ Agile)*	*Requirement Management*	*Hardware Schematic, Component design, Layout and Hardware Testing.*	*Product Testing standards and Certification - Industry specific;*	*Product development Trade-offs*
S-8	SLO-1	*Product Life Cycle (S-Curve, Reverse Bathtub Curve)*	*Introduction to System Modeling,System Optimization*	*Prototyping: Types of Prototypes (Mockups, Engineering Assessment Prototype, Alpha, Beta, Gama)*	*Product Documentation (Compliance Documentation, Catalogue, Brochures, user manual)*	*Intellectual Property Rights and Confidentiality*
S-9	SLO-1	*Product Development Planning and Management (Budgeting, Risk, Resources and Design Collaboration) Product Development Planning and Management (Scheduling, Change Management, Product Cost Management)*	*System Specification; Sub-System Design; Interface Design.*	*Introduction to Rapid Prototyping and Rapid Manufacturing*	*Product Documentation (maintenance Manual, Spares Parts List, Warranty, Disposal Guide, IETMS, Web Tools)*	*Security and configuration management.*

Course Code	18MEE309T	Course Name	MODELING SYSTEMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Acquire knowledge to model systems seen in reality*
CLR-2 :	*Understand the use of mathematics in modeling*
CLR-3 :	*Understand the basic principles of modeling systems*
CLR-4 :	*Understand and develop simple models*
CLR-5 :	*Understand and recognize that modeling as an interdisciplinary requirement*
CLR-6 :	*Understand and correlate real time problems with mathematical forms*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand and correlate engineering systems seen in real time environment with the modeling systems*	1&2	90	85	H	H	-	-	-	-	H	-	-	-	-	-	-	-	-
CLO-2 :	*Understand and realize the use of mathematics in modeling engineering systems*	1&2	90	85	H	H	-	-	-	-	-	-	-	-	-	-	-	-	-
CLO-3 :	*Understand and able to convert real time problems into mathematical form*	1&2	90	85	H	H	-	-	-	-	-	-	-	-	-	-	-	-	-
CLO-4 :	*Understand and model various components of engineering systems*	1,2,&3	90	85	H	H	H	H	H	-	-	-	-	-	-	-	-	-	-
CLO-5 :	*Modeling engineering systems such as mechanical systems and thermal systems*	1,2&3	90	85	H	H	H	H	H	-	-	-	-	-	-	-	-	-	-
CLO-6 :	*Understand and recognize that modeling is an interdisciplinary requirement*	1,2	90	85	H	H	-	-	-	-	-	-	-	-	-	-	-	-	-

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction: Model – Definition, Nature and necessity*	*Use of Modeling Mathematics: Principles of modeling – common aspects of all mechanical systems*	*Generate Simple Models: Introductions to system identification*	*Understanding the Mathematics in Response: Characteristic equation*	*Project: Identify a system*
S-2	SLO-1	*History of modeling*	*Given a simple system – create a model*	*Model mechanical systems - Rectilinear*	*Solution of characteristic equation*	*Objectives of modeling and simulation of a system*
S-3	SLO-1	*Different type of modeling*	*Assessment of reality of the model – degree of accuracy*	*Model mechanical systems - Torsional*	*Introduction to Eigen values – natural frequencies - eigen vectors – mode shapes*	*Identify components*
S-4	SLO-1	*Impact of computers on modeling*	*Quadratic oscillator system and need for this model*	*Model a thermal system*	*Use of Laplace transforms for stability analysis*	*Model components – test each component*
S-5	SLO-1	*Different areas of application – Design, Thermodynamics, Mechanics, Controls etc.*	*Spring mass damper system and need for such a system*	*Response analysis – the reverse engineered explanation*	*Different type of representation of systems*	*Assemble the model*
S-6	SLO-1	*Modeling in software*	*Linearity of springs – modeling*	*Study of response for different inputs – modeling inputs*	*How to analyze for controllability*	*Identify suitable inputs – model them*
S-7	SLO-1	*Introduction to Discrete and continuous systems*	*Modeling damping – different type*	*Time driven models*	*How to analyze for observability, stabilizability*	*Analyze the response to that input*
S-8	SLO-1	*Components of systems*	*Modeling systems – assemble - quadratic*	*Event driven models*	*Conditions for the same*	*Submit a report*
S-9	SLO-1	*Areas of applications*	*Relate mathematics to real system – ODEs, Transforms – solutions*	*Numerical experimentation*	*Relevance of these tests to modeling*	*Presentation and viva voce*

Course Code	18MEE310T	Course Name	HUMAN BODY MECHANICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Upon learning the students shall understand the fundamentals of biomechanics, joints, tissue overall anatomical structure and their importance.*
CLR-2 :	*Upon learning the students shall understandthe mechanism of the different parts of the human body.*
CLR-3 :	*Upon learning the students shall understandthe musculoskeletal system with tissue loads and responses and neuromuscular control.*
CLR-4 :	*Upon learning the students shall understand kinematics, is the accurate description of motion and is essential to understanding the biomechanics of human motion. Kinematics can range from anatomical descriptions of joint rotations to precise mathematicalmeasurements of musculoskeletal motions.*
CLR-5 :	*Upon learning the students shall understand, the Newton's Laws of Motion in the human body and how these laws can be applied to human motion in the biomechanical principles of Force–Motion, Force–Time, and Coordination ContinuumPrinciples*
CLR-6 :	*Enableunderstanding of the concepts of human body mechanics that illustrate the application of biomechanics principles. These principles are the application for the biomechanical concepts used to improve movement or reduce injury risk*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning			Program Learning Outcomes (PLO)

		Introduction to Biomechanics of Human Movement and Anatomy of Human Body.	Equilibrium and Human Movement	Mechanics of the Musculoskeletal System	Kinematics of Human Movement	Angular Kinetics of Human Movement.
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to biomechanics,Importance of Biomechanics, Improving Performance Preventing and Treating Injury*	*Equilibrium and Torque*	*General introduction of tissue and its classifications.*	*Kinematic convention, Proximal, Flexion, Anterior*	*Introduction to angular kinematics in arms for the biceps femoris muscle*
S-2	SLO-1	*Quantitative versus qualitative problems*	*Resultant Joint Torques*	*Response of Tissues to Forces, Stress, Strain, Stiffness and Mechanical Strength, Viscoelasticity*	*absolute spatial reference system for human gait*	*Sample problems on applying forces in optimal direction for maximum torque output*
S-3	SLO-1	*Structure, movements and loads on the shoulder*	*Levers, Anatomical levers*	*Biomechanics of the Passive Muscle–Tendon Unit (MTU)*	*Total description of a body segmentation in space*	*Moment of inertia of a skeleton about a specific axis*
S-4	SLO-1	*Structure, movements and loads on the elbow and wrist*	*Equations of static and dynamic equilibrium*	*Biomechanics of Bone*	*Direct measurement techniques*	*Newton's laws to calculate the net forces and torques acting on body segments.*
S-5	SLO-1	*Structure, movements and loads on the hip*	*Center of gravity and locating the center of gravity*	*Biomechanics of Ligaments*	*Goniometers Eletro goniometer*	*static equilibrium and a reaction board to calculate whole body center of gravity*
S-6	SLO-1	*Structure, movements and loads on the knee*	*Locating the human body Center of Gravity, Stability and balance.*	*Three Mechanical Characteristics*	*Image measurement techniques*	*whole body center of gravity of a high jumper using the*

				of Muscle, Force–Velocity Relationship, Force–Length Relationship, Force–Time Relationship		*segmental method and a three-segment model of the body. Most*
S-7	SLO-1	*Structure, movements and loads on the spine*	*Properties of Bone, Maxwell &Voight Models of bone*	*Stretch-Shortening Cycle (SSC)*	*Cinematography*	*PRINCIPLE OF BALANCE*
S-8	SLO-1	*Structure, movements and loads on the foot*	*Biomechanics of human skeletal muscle.*	*Force–Time Principle*	*Optoelectic techniques*	*two-dimensional area within all supporting Biomechanical system.*
S-9	SLO-1	*Common injuries in shoulder, elbow wrist, hip knee, spine and foot.*	*Biomechanics of human Skeletal Articulations*	*Neuromuscular Control, The Functional Unit of Control: Motor Units, Regulation of Muscle Force, Proprioception of Muscle Action and Movement.*	*Problems on calculating velocities and accelerations*	*The position of the line of gravity relative to the limits of the base of support*

		Flexible Drives	Parallel Gears	Non-Parallel Gears	Gear Boxes	Bearings
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Belt drives: types, selection of belt drives*	*Review of gear fundamentals, Forces and stresses in geartooth*	*Straight bevel gear: Terminology*	*Geometric progression, standard step ratio,structural andray diagrams Number of teeth calculation*	*Introduction of Hydrodynamic journal bearings*
	SLO-2	*Belt materials and applications*	*Equivalent number of teeth, gear tooth failures, Selection of gear materials*	*Forces and stresses on gear tooth*		*Sommerfeld Number, Raimondi and Boyd graphs*
S-2	SLO-1	*Selection of flat belt drives using fundamental equations*	*Design procedure on spur gear based on strength consideration*	*Design procedure on bevel gear based on strength consideration*	*Design procedure on sliding mesh gear box*	*Bearing materials, properties required for bearing materials, System of lubrication*
	SLO-2	*problems on flat belt drives using fundamental equations*	*Problems on spur gear based onstrength consideration*	*Problems on bevel gear based onstrength consideration*	*problems on sliding mesh gear box*	
S-3	SLO-1	*Selection procedure for flat belt drives using manufacturer's data*	*Problems on spur gear based onstrength consideration*	*Problems on bevel gear based onstrength consideration*	*problems on sliding mesh gear box*	*Selection procedure for journal bearing*
	SLO-2	*Problems on flat belt drives using manufacturer's data*				
S-4	SLO-1	*Selection procedure for V-belt drives using fundamental equations*	*Design procedure on spur gear based on wear consideration*	*Design procedure on bevel gear based on wear consideration*	*Design procedure on constant mesh gear box*	*Problems injournal bearings*
	SLO-2	*Problemson V-belt drives using fundamental equations*	*Problems on spur gear based onwear consideration*	*Problems on bevel gear based onwear consideration*	*Problems on constant mesh gearbox*	
S-5	SLO-1	*Selection procedure for V-belt drives using manufacturer's data*	*Problems on spur gear based onwear consideration*	*Problems on bevel gear based onwear consideration*	*Design of Multi speed gear box for machine toolapplications*	*Introduction to Roller contact bearings*
	SLO-2	*Problems on V-belt drives usingmanufacturer's data*				
S-6	SLO-1	*Wire ropes: types, construction and Selection of wire ropes*	*Design procedure on helical gear based on strength consideration*	*Worm gear: Thermal capacity, efficiency, forces andstresses*	*Design of Multi speed gear box for machine toolapplications*	*Types of bearing, Load rating, bearing materials and bearing failure*

	SLO-2	*Stresses in wire ropes*	*Problems on helical gear based onstrength consideration*	*Design procedure on worm gear based onstrength consideration*		
S-7	SLO-1	*Selection procedure for wire ropes*	*Problems on helical gear based onstrength consideration*	*problems on worm gear based onstrength consideration*	*Variable speed gear box*	*Selection of bearing*
	SLO-2	*Problems on wire ropes*				
S-8	SLO-1	*Power transmission chains: types and applications*	*Design procedure on helical gear based on wear consideration*	*Design procedure on worm gear based on wear consideration*	*Fluid couplings*	*Problems in ball bearing*
	SLO-2		*Problems on helical gear based onwear consideration*	*Problems on worm gear based onwear consideration*		
S-9	SLO-1	*Selection procedure on power transmission chains and sprockets*	*Problems on helical gear based onwear consideration*	*Problems on worm gear based onwear consideration*	*Torque convertor for automotive applications*	*Problems in roller bearing*
	SLO-2	*Problems on power transmission chains and sprockets*

CLO-3 :	*understand and apply the concept of constrained in single variable as well as multivariable*	*1&2*	*90*	*85*	*H*	*H*													
CLO-4 :	*understand and apply the concept unconventional optimization techniques*	*1&2,3*	*90*	*85*	*H*	*H*		*H*											
CLO-5 :	*apply the methods of optimization in real life situation*	*1&2,3*	*90*	*85*	*H*	*H*	*H*	*H*											

		Introduction to optimization	Unconstrained optimization techniques	Constrained optimization techniques	Modern Methods of Optimization	Applications
Duration(hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to optimization: adequate and optimum design*	*Techniques of unconstrained optimization*	*Direct search methods: Random jumping method, Random walk method*	*Genetic Algorithm Introduction*	*Design optimizationof springs*
S-2	SLO-1	*Principles of optimization,design vector, design constraints*	*Golden section method.*	*Tutorials on Random Jumping Method*	*Basic elements of natural genetics—reproduction, crossover, and mutation*	*Design vector for springs*
S-3	SLO-1	*Statement of an optimization problem*	*Fibonacci method*	*Tutorials on Random Walk Method*	*The computational procedure involved in optimizing the fitness function in genetic algorithm*	*Objective function for springs*
S-4	SLO-1	*Formulation of objective function*	*Random search*	*Direct search methods: conjugate gradient method, quasi-Newton methods*	*Tutorials on Genetic Algorithm*	*Design optimizationof shafts and torsionally loaded members.*
S-5	SLO-1	*Design constraints*	*Random search*	*Tutorial on conjugate gradient method*	*Simulated Annealing: Introduction*	*Design vectors for torsionally loaded members*
S-6	SLO-1	*Classical optimization techniques: single variable*	*Pattern search*	*Indirect methods –Penalty function method*	*Simulated Annealing - Steps involved*	*Objective function fortorsionally loaded members*
S-7	SLO-1	*Classical optimization techniques: single variable*	*Gradient search*	*Indirect methods –Penalty function method problems*	*Ant colony optimization: Basic Concept*	*Design optimization of simple truss members*
S-8	SLO-1	*Classical optimization techniques: multivariable*	*Quadratic interpolation method*	*Interior penalty function method*	*Ant colony optimization: Ant Searching Behavior*	*Design vectors forsimple truss members*
S-9	SLO-1	*Classical optimization techniques multivariable*	*Cubic interpolation method*	*Exterior penalty function method*	*Graphical representation of the Ant colonyoptimization process*	*Objective function for simple truss members*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with tool materials and their properties*
CLR-2 :	*Be familiar with the design of single point cutting tools and twist drills*
CLR-3 :	*Be familiar with the design of various types of dies*
CLR-4 :	*Be familiar with the blank development for different components*
CLR-5 :	*Be familiar with the design of jigs and fixtures for simple components*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)
CLO-1 :	*Identify suitable tool materials for the specific manufacturing applications*	*1&2*	*85*	*80*
CLO-2 :	*Design single point cutting tools and twist drill for different machining requirements*	*2&3*	*85*	*80*
CLO-3 :	*Design various types of dies for manufacturing components*	*2&3*	*85*	*80*
CLO-4 :	*Develop the blank for cylindrical and non-cylindrical shells*	*2&3*	*85*	*80*
CLO-5 :	*Design and develop the jigs and fixtures for simple mechanical components*	*2&3*	*85*	*80*

Program Learning Outcomes (PLO)

	1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3

CLO-5	*H*	*H*	*H*	*H*	-	-	-	-	*M*	-	-	-	*H*	*L*	*H*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Different types of tool materials: cemented carbides, coatedcarbides, cermets,*	*Press working terminology*	*Principles of jigs and fixtures*	*Design principles of fixtures*	*Case study in jigs*
S-2	SLO-1	*ceramics and polycrystalline and new tool materials*	*Different types of Presses and press accessories*	*Locating principles and different locating elements*	*Design of fixtures for milling operation*	*Case study in jigs*
S-3	SLO-1	*Composition and properties of tool materials*	*Computation of capacities and tonnage requirements ofpresses*	*Clamping principles, clamping devices and types in jigs*	*Design of fixtures for boring operation*	*Case study in jigs*
S-4	SLO-1	*Cutting tool selection and treatments*	*Various types of Strip layout*	*Analysis of clamping force*	*Design of fixtures for broaching & grinding operation*	*Case study in fixture*
S-5	SLO-1	*Design of single point turning tools and multipoint tools*	*Different types of dies, Progressive dies, Combination diesand compound dies*	*Function of drill bush, types drill bushes*	*Design of fixture for assembly*	*Case study in fixture*
S-6	SLO-1	*Problems on the design of single point cutting tool alone*	*Design and development of various types of cutting, forming,bending and drawing dies*	*Different types of jigs , Plate jig, latch jig, channel jig,*	*Design of fixture for inspection*	*Case study in fixture*
S-7	SLO-1	*Selection of tool holders and inserts for turning*	*Design and development of various types of cutting, forming,bending and drawing dies*	*Different types of jigs Post jig, angle plate jig, turn over jig, and pot jigs*	*Design of fixture for welding*	*Case study in press tools*
S-8	SLO-1	*Function of Chip breaker, types of chip breaker*	*Blank development for cylindrical and non-cylindrical shells, blank size calculation*	*Design and development of jigs for given components*	*Design and development of fixtures for given components*	*Case study in press tools*
S-9	SLO-1	*Design of twist drill and reamers*	*Forging dies basics and materials for forging dies*	*Design and development of jigs for given components*	*Design and development of fixtures for given components*	*Case study in press tools*

CLO-6 :	*Understand about computer graphics and various modeling techniques*																		

		Introduction to Computer Graphics	Special Curves	Surface modeling	Three Dimensional computer graphics	Graphics and Communication standards
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Origin of computer Graphics*	*Introduction of Curve representation*	*Introduction of Surface modeling techniques*	*Boundary representation (B-rep)*	*Graphics and data exchange standards*
S-2	SLO-1	*Interactive graphics display*	*Introduction to Bezier curve*	*Coonspatch*	*Basic elements and building operations*	*Graphical Kernel System*
S-3	SLO-1	*Video Display devices*	*Parametric representation of Bezier curve*	*Mathematical representation and boundaries of Coons patch*	*Constructive solid geometry (CSG)*	*Bit maps*
S-4	SLO-1	*Types of Display devices*	*Introduction toCubic spline curve*	*Bi-Cubic patch*	*Basic elements and Building operations*	*open GL (graphics library)*
S-5	SLO-1	*Algorithm for line, circle*	*Parametric representation of Cubic spline curve*	*Mathematical representation of Bi-Cubic patch*	*Viewing transformations*	*Data exchange standards (IGES)*
S-6	SLO-1	*2D transformation (scaling, rotation, translation)*	*Introduction toB-Spline curve*	*Bezier surface*	*Clipping operations*	*STEP and CALLS*
S-7	SLO-1	*3D transformation scaling &rotation*	*Parametric representation of B-Spline curve*	*Mathematical representation of Bezier surface*	*Hidden line removal for curved surfaces*	*DXF Standard and STL*
S-8	SLO-1	*3D transformation Translation*	*Introduction toRotational curves*	*B-Spline surface*	*Algorithms for shading*	*Communication standards, LAN*
S-9	SLO-1	*Concatenation transformations*	*Parametric representation of Rotational curves*	*Mathematical representation of B spline surface*	*Algorithms for rendering*	*Communication standards, WAN*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Fatigue crack propagation, similitude in Fatigue*	*Introduction to environmentally assisted cracking in metals, Corrosion principles: electrochemical reactions*	*Introduction to fracture mechanics: Kinds of failure, brittle and ductile fracture, modes of fracture failure*	*Anelastic deformation at crack tip: approximate shape and size of plastic zone*	*Introduction to creep, characteristics of creep*
S-2	SLO-1	*Empirical fatigue crack growth equations*	*Corrosion current and polarization, electrode potential and passivity, cathodic protection*	*Energy release rate: Griffith's dilemma, surface energy, Griffith's analysis, mathematical formulation, compliance approach, strain energy approach*	*Anelastic deformation at crack tip: effective crack length, effect of plate thickness*	*Mechanisms of creep: dislocation creep, diffusion creep, grain boundary sliding, Creep deformation mechanism maps*
S-3	SLO-1	*Crack closure, closer look at crack-wedging mechanisms, loading variables on closure*	*Environmentally assisted cracking (EAC) overview: Cracking mechanisms*	*Energy release rate: anelastic deformation at crack tip, thin plate vs thick plate*	*Definition of J-Integral, path independence, stress-strain relation*	*Creep under multiaxial loading, combined stresses, stress relaxation*
S-4	SLO-1	*The fatigue threshold: a two-criterion model, threshold behavior in inert environments*	*Crack growth rate vs applied stress intensity, threshold for EAC, small crack effects*	*Energy release rate: crack resistance, stable and unstable crack growth, critical energy release rate*	*Further discussion on J-integral from a designer's point of view, critical J-integral, safety or failure*	*Creep-fatigue interaction, creep fractures*
S-5	SLO-1	*Variable amplitude loading and retardation: reverse plasticity at crack tip, the effect of overloads and underloads*	*Static, cyclic and fluctuating loads, cracking morphology, life prediction*	*Introduction to Stress intensity factors, Investigations closer to crack tip, LEFM*	*J-Integral: engineers approach, simplified relation, applications*	*Creep test, stress rupture test, representation of creep rupture data*
S-6	SLO-1	*Models for retardation and variable amplitude fatigue*	*Stress corrosion cracking, film rupture model*	*Stress intensity factor: Stress and displacement fields in isotropic elastic materials, field equations*	*Introduction to CTOD, relationship between CTOD, K_I and G_I, Equivalence between CTOD and J*	*Creep and Stress Rupture: Deformation and fracture at Elevated Temperature*
S-7	SLO-1	*Growth of short cracks: microstructural and mechanical*	*Crack growth rate in stage II, corrosion product wedging*	*Stress intensity factor: Westergaard's approach, Mode I (opening mode), Mode II (sliding mode), Mode III (tearing mode)*	*Introduction to mixed mode crack initiation and growth*	*Theories of low and high temperature creep*

S-8	SLO-1	*Micromechanisms of fatigue: Fatigue in region II, micromechanisms near the threshold*	*Hydrogen embrittlement, cracking mechanisms, Variables that effect cracking behavior: load, hydrogen, temperature*	*SIF of more complex cases: Other applications of Westergaard approach, applications of principle of superposition*	*Mixed mode crack propagation: maximum tangential stress criteria, Strain energy density criterion*	*Prediction of longtime properties, effect of metallurgical variables, Creep resistant materials, hightemperature alloys*
S-9	SLO-1	*Damage tolerance methodology*	*Corrosion fatigue, time dependent and cycle dependent behavior, Mechanisms of corrosion fatigue, effect of corrosion product wedging on fatigue*	*Edge cracks, embedded cracks, critical stress intensity factor*	*Mixed mode examples, crack growth*	*Design considerations to avoid creep*

CLO-4 :	*solve the plane elasticity problems using different solution method*	1,2,3			*H*	*H*	*H*												
CLO-5 :	*Solve torsion and elastic cylinders problems*	1,2,3			*H*	*H*		*H*								*H*			
CLO-6 :	*Able to understand the basics of Tensors, Index Notation, Coordinate Transformations, Deformation and Strain, Strain Transformation, Principal Strains, StrainCompatibility,*	1,2			*H*	*H*													

		Foundations	General Results	System Response	Plane Elasticity Problems	Torsion And Flexure Of Elastic Cylinders
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Mathematical Preliminaries-Scalar, Vector, Matrix, and Tensor Definitions*	*Review of Field Equations*	*Anti-plane Strain*	*Plane Stress and Plane Strain*	*General solution of the torsion problem*
S-2	SLO-1	*Index notation*	*Field equations and boundary conditions, Navier equations*	*Field Equations and Boundary Conditions*	*Introduction to Airy Stress Function*	*Prandtl Stress Function*
S-3	SLO-1	*Concept of Stress- Strains and Deformation*	*Stress Formulation-Beltrami-Michell compatibility equations*	*Complex Variable Solutions to Anti-plane Strain Problems*	*Stress function, stress function for plane stress and plane strain cases*	*Torsion Solutions Derived from Boundary Equation*
S-4	SLO-1	*Coordinate Transformations -Strain Transformation*	*Displacement Formulation Principle of Superposition*	*Solution using Taylor Series*	*Introduction to Cartesian Coordinate Using Polynomials*	*Torsion Solutions Using Fourier Methods*
S-5	SLO-1	*Principal Strains, Strain Compatibility*	*2D approximations (plane stress and plane strain) and solution strategies*	*Solution using Laurent Series*	*Cartesian Coordinate Solutions Using Polynomials*	*Torsion of Hollow Cylinders*
S-6	SLO-1	*TractionVector*	*Uniqueness Theorems-Reciprocal Theorem*	*Solution using Cauchy Integral Formula*	*Introduction to Cartesian Coordinate Using Fourier Methods*	*Torsion of Circular Shafts of Variable Diameter*
S-7	SLO-1	*Stress Transformation*	*Principle of Virtual Work*	*Solution using Cauchy Integral Formula*	*Cartesian Coordinate Solutions Using Fourier Methods*	*Torsion of elliptic cross sections*
S-8	SLO-1	*Equilibrium Equations&Generalized Hooke's law.*	*Principle of Minimum Potential and Complementary Energy*	*Solution using Conformal Mapping*	*Introduction to Solutions in Polar Coordinates*	*Flexure Formulation*
S-9	SLO-1	*Review of Continuum Mechanics Concepts*	*Saint-Venant's Principle*	*Solution using Conformal Mapping*	*Axisymmetric problems, thick-walled cylinders, rotating disks of uniform thickness, stress concentration, effect of circular holes on stress distribution in plates.*	*Flexure Problems without Twist*

Course Code	18MEE407T	Course Name	DESIGN OF PRESSURE VESSEL AND PIPING	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC206T	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	ASME Pressure Vessel and Boiler Code; Section VIII Div. 1&2; 2003.American Standard Code for Pressure Piping; B 31.1.		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1:	*Familiarize with basics of Pressure vessel design*
CLR-2:	*Familiarize with different types of stresses and their effects in Pressure vessel.*
CLR-3:	*Equip with Pressure vessel design.*
CLR-4:	*Expose to failuremechanisms in Pressure vessel.*
CLR-5:	*Expose to the concept of piping layout and the stresses acting on it.*
CLR-6	*Analyse and design of pressure vessel and piping.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1:	*understand the basics of pressure vessel design*	*1&2*	*90*	*85*	*H*	*H*	*H*	*M*										*L*	
CLO-2:	*determine various stresses, and their effects in pressure vessel.*	*12&3*	*90*	*85*	*H*	*H*	*H*											*L*	
CLO-3:	*design pressure vessel.*	*12&3*	*90*	*85*	*H*	*H*	*H*											*L*	
CLO-4:	*know the various types of failures in pressure vessel.*	*12&3*	*90*	*85*	*H*	*H*	*H*											*L*	
CLO-5:	*know the concepts of piping layout and the stresses acting on it*	*12&3*	*90*	*85*	*H*	*H*	*H*											*L*	
CLO-6	*Know the design concepts of pressure vessel and piping*	*1 2&3*	*90*	*85*	*H*	*H*	*H*											*L*	

		Overview of Pressure Vessel and stresses	Stresses in Pressure Vessels	Design of Pressure Vessels	Failure Analysis of vessels	Fundamentals of piping design
Duration (hour)		09	09	09	09	09
S-1	SLO-1	*Introduction, construction and design procedure.*	*Stresses in cylinder, Dilation of pressure vessels, Intersecting spheres.*	*Stress concentration at a variable thickness transition section in a cylindrical vessel, circular hole, Elliptical Openings*	*Buckling phenomenon, vessels under external pressure.*	*Introduction to piping, definition,codes, standards and specifications.,*
S-2	SLO-1	*. Design approach, design by rule, design by analysis.*	*Membrane stresses in vessel under internal pressure, cylindrical vessel, spherical, conical vessel.*	*Stress concentration factor for superposition, Dynamic and thermal transient condition.*	*Elastic buckling of circular ring, deflectioncurve, buckling.*	*Piping components, pipe, pipe fittings, flanges, valves, bolt and gaskets.*
S-3	SLO-1	*Introduction, Stress intensity, Stresses in a circular ring.*	*Thermal stresses in long hollow cylinder, logarithmic, thermal gradient.*	*Design of tall cylindrical self-supporting process columns for short vertical vessels.*	*Buckling of long cylinder or tubes, inelastic collapse, initial non-circularity.*	*Flow diagram, piping layout*
S-4	SLO-1	*Stress significance, stress pattern.*	*Linear thermal gradient, Steady state Thermal stresses.*	*Design of supports for short vertical vessel.*	*Collapse of thick walled cylinder, fully plastic wall,*	*underground, above ground pipelines*
S-5	SLO-1	*Residual stress, shape of a member*	*Thermal stresses due to thermal gradients.*	*Theory of reinforced openings.*	*Collapse of the wall of a cylinder.*	*Piping stress analysis, Forces and moments*
S-6	SLO-1	*Methods for determining stresses, strain gauge, Photo elastic, Moiré.*	*Ultra-high-pressure vessel -design principle, wedge, segment principle.*	*Nozzle reinforced placement shape, single nozzles, Multiple nozzles, Nonradical nozzles.*	*Effect of supports on elastic buckling, buckling, collapse coefficient.*	*Piping specifications, static and dynamic loads*
S-7	SLO-1	*Thermal stresses, thermal strains and their significance.*	*Cascade principle, yoke Beam and ties, Anvil principle, Bridge man massive conical anvils.*	*Pressure vessel design, welded joints, strength of weldments.*	*Buckling under combined external pressure and axial loading*	*nomenclature of pipe supports, guided cantilever method*

S-8	SLO-1	*Terminology of vessel, vessel Ligament.*	*Discontinuity stresses in pressure vessels, Cylindrical vessels with various heads, Infinite long beam, semidefinite beam.*	*Bolted joints and gaskets, thread and nut design, bolt head, shank design.*	*interaction method, interaction equations in design.*	*Design of piping system, pressure components design*
S-9	SLO-1	*Ligament efficiency, Longitudinal, circumferential ligaments in a cylindrical and spherical shape.*	*Stresses in a bimetallic joint, deformation and stresses in flanges.*	*Introduction to ASME pressure vessel codes.*	*Safety factors in design, Imperfection sensitivity*	*minimum wall thickness of pipe, pipe span calculations, Ansi piping codes.*

Learning Resources	1. *John F. Harvey, "Theory and Design of Pressure vessels", CBS publishers and Distributors, 1987.* 2. *Henry H Bedner, " Pressure Vessels, Design Hand Book ", CBS publishers and Distributors ,1987.* 3. *Somnath Chattopadhyay," Pressure vessels: Design and practice ", CRC Press ,2004.* 4. *Smith P., "Fundamentals of piping design", Elsevier Gulf Publishing Company 2007.* 5. *William. Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction about machines and mechanisms – Robot anatomy*	*Link coordinates for D-H representation*	*Inverse Kinematics of transformation*	*Introduction & analysis of work space*	*Introduction to manipulator dynamics*
	SLO-2					
S-2	SLO-1	*Arm and wrist configuration of Robot*	*Arm matrix and Arm equation – DH representation of Kinematics model*	*General properties of solution*	*Workspace analysis for 4 axis SCARA robot*	*Lagrange's equation - kinetic and potential energy*
	SLO-2					
S-3	SLO-1	*Position and orientation of objects, descriptions: Positions, Orientations and Frames*	*Direct Kinematics of 2 DOF Planar Manipulator arm*	*Inverse Kinematics for 2 DOF planar robot*	*Work space fixtures*	*Link inertia tensor*
	SLO-2					*Link jacobian manipulator inertia tensor*
S-4	SLO-1	*Coordinate transformation / Mapping in fixed angle rotation*	*Direct Kinematics of 3 axis articulated robot – Link*	*Inverse kinematics – 3 DOF articulated robot – Guide lines, solution techniques*	*Trajectory planning - Terminology*	*Gravity and generalized forces*
	SLO-2				*Trajectory planning – pick and place motion*	
S-5	SLO-1	*Mappings: Changing descriptions from Frame to Frame*		*Inverse kinematics – 3 DOF articulated robot – Derivation of equations*	*Continuous path motion – Joint space technique and Cartesian space technique*	*Lagrange – Euler Dynamic model formulation*
	SLO-2					
S-6	SLO-1	*Operators: Translations, Rotations and Transformations, Transformation Arithmetic*	*Direct Kinematics of 3 DOF wrist*	*Inverse kinematics of RPY wrist*	*Trajectory planning – Interpolated motion*	*Kinetic and Potential Energy Formulation for Two axis planar robot*
	SLO-2					
S-7	SLO-1	*Transformation of Vectors for Rotation, translation and composite*		*Inverse kinematics of – 4 axis SCARA robot – General solution*	*Trajectory planning – straight line motion*	*L-E Dynamics model for Two axis planar robot*
	SLO-2					

S-8	SLO-1	*Inverting Transformation*	*Direct Kinematics Analysis of 4 axis SCARA Robot*	*Tool Configuration*	*Trajectory planning for 3 DOF Manipulator*	*Newton – Euler formulation*
	SLO-2					
S-9	SLO-1	*Rotation Matrix – fixed and Euler angle representation*		*Tool configuration of a 4 axis SCARA robot*	*Trajectory planning for 4 DOF SCARA Manipulator*	*N-E Dynamics model for Two axis planar robot*
	SLO-2

CLO-5 :	*Design of mechatronics system and its applications.*	3	90	85	H	M	H	H	-	-	-	-	-	-	-	-	H	M	L
CLO-6 :	*Differentiate, analysis and design mechatronics systems.*	3	90	85	H	M	M	M	L	-	-	-	-	-	-	-	H	M	L

		Introduction to Mechatronics	Sensors and Transducers	Electrical Drives and Controllers	Programmable Logic Controllers	Mechatronics System Design and Application
Duration (hour)		9	10	10	8	8
S-1	SLO-1	*Introduction to Mechatronics systems*	*Introduction to sensors and transducers, classification and Static and dynamic characteristics.*	*Introduction, Electromagnetic Principles, Solenoids and Relays*	*Basic structure, Programming units and Memory of Programmable logic controller*	*Mechatronics in Engineering Design, Traditional and mechatronics design*
S-2	SLO-1	*Mechatronics system components and Measurement Systems, Control Systems.*		*Electrical drives of stepper motors, servo motors.*		*Car park barriers using PLC*
S-3	SLO-1	*Open and Closed Loops Systems temperature control*	*Principle and working of Resistive, capacitive, inductive transducer.*		*Input and Output Modules, Mnemonics for programming*	*Pick and Place robots and Bar code reader*
S-4	SLO-1		*Resonant transducer and Optical measurement systems for absolute and incremental encoders*	*Operational amplifier*	*Latching and Internal relays*	
S-5	SLO-1	*Water level controller and Shaft speed control*	*Photo electric sensor and vision system*	*A/D converters*	*Timers, Counters and Shift Registers*	*Automotive control systems*
S-6	SLO-1		*Fibre optic transducers*	*D/A converters*		*Robotics Applications*
S-7	SLO-1	*Sequential Controllers : Washing machine control*	*Solid state sensors and transducers for magnetic measurements*	*Signal processing, Multiplexer and Introduction to Data acquisition system*	*Master relay and Jump Controls*	*Case studies for Coin counters, Robot walking and Boiler control using PID.*
S-8	SLO-1	*Sequential Controllers : Digital camera*	*Temperature measurements*	*Proportional, Integral, Derivative and PID controller*	*Programming the PLC using Ladder diagram for Simple applications.*	
S-9	SLO-1	*MEMS and the automobile airbag*	*Chemical measurements, piezoelectric sensor and accelerometers*	*Introduction to Micro controller : M68HC11 and ATMEGA328*		
S-10	SLO-1		*Ultrasonic sensors and transducers for flow and distance*

Course Code	18MEE322T	Course Name	FLUID POWER CONTROL	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses		Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with the construction and working of hydraulic power generating and utilizing elements*
CLR-2 :	*Know the working of various control valves and familiar with accessories in hydraulic systems*
CLR-3 :	*Be familiar with the construction and working of pneumatic systems and fluidic control*
CLR-4 :	*Be familiar with designing of fluid power circuits for given applications*
CLR-5 :	*Know the maintenance procedures and trouble shooting*
CLR-6 :	*understand the fluid power systems and to develop circuits for industrial applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)
CLO-1 :	*Recognize the use of power generating elements, and acquire knowledge the principles and characteristics of hydraulic components*	1&2	90	85
CLO-2 :	*Acquire knowledge on working of various control valves and familiar with accessories in hydraulic systems*	1	90	85
CLO-3 :	*Acquire knowledge on the principles and working of pneumatic components.*	1	90	85
CLO-4 :	*Design the circuit for given applications*	1,2&3	90	85
CLO-5 :	*Acquire knowledge on maintenance and analyze the trouble shooting of fluid power systems*	1&2	90	85
CLO-6 :	*Understand fluid power systems and apply knowledge to develop fluid power circuits for industrial applications*	1,2&3	90	85

Program Learning Outcomes (PLO)	1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1	H	-	-	-	-	-	-	-	-	-	-	-	L	L	L

CLO-6	H	H	H	-	-	-	M	-	-	-	-	-	M	M	M

Duration (hour)		Hydraulic Power Generating And Utilizing Systems	Hydraulic Valves And Accessories	Pneumatic Systems	Design Of Fluid Power Systems	Applications, Maintenance And Trouble Shooting
		10	9	9	9	8
S-1	SLO-1	*Introduction to fluid power system, Hydraulic fluids functions, types, properties, selection and application.*	*Construction and working of manually, pilot and solenoid operated 2/2, 3/2, 4/2,4/3, directional control valves*	*Introduction, comparison with hydraulic systems and electrical systems*	*Fluid power actuators: Speed and force calculations in fluid power systems*	*Industrial hydraulic circuits for riveting machine.*
S-2	SLO-1	*POWER GENERATING ELEMENTS: Construction, operation, characteristics of External Gear pump, internal Gear pump*	*Construction and working of pressure relief, compound pressure relief, pressure sequence valves*	*Construction, operation, characteristics and symbols of reciprocating and rotary compressors*	*Pump performance calculations, Sizing of reservoirs. Calculation of pressure and pressure drop across components in fluid power circuits*	*Hydraulic circuits for grinding and shaping machine.*
S-3	SLO-1	*Construction, operation, characteristics of Lobe, Gerotor and Screw pumps*	*Construction and working of pressure reducing, counter balance valves*	*Construction, operation, characteristics and symbols of 3/2, 5/2, 5/3 manual operated, pilot operated and solenoid operated DCVs*	*Finding the capacity of accumulators required for hydraulic systems.*	*Working of hydraulic press and pump unloading circuits*
S-4	SLO-1	*Construction, operation, characteristics of Un balanced and balanced vane pump*	*Working principle of check valve, throttle valve, one way FCV.*	*Need for air treatment, Filter, Regulator, Lubricator, Muffler and Dryers*	*Selection of different components such as reservoir, various valves, actuators, filters, pumps for a practical application.*	*Hydraulic / pneumatic circuits for material handling Systems*
S-5	SLO-1	*Construction, operation, characteristics of pressure compensated vane pump*	*Working principle of pressure compensated FCV, and their applications.*	*Introduction to fluidic devices, working of Bi-stable, monostable devices*	*Design of hydraulic/pneumatic circuits for simplereciprocation, regenerative, speed control of actuators*	*Preventive and breakdown, maintenance procedures in fluid power systems*
S-6	SLO-1	*Construction, operation, characteristics of bent axis piston pump, swash plate piston pump and Radial Piston Pump*	*Importance of proportional valves, Servo valves and its applications*	*Fluidic application circuits – continuous reciprocation and sequencing*	*Design of hydraulic/pneumatic circuits for sequencing, synchronization*	*Trouble shooting of fluid power systems : problems, causes and remedies-hydraulics*

S-7	SLO-1	*Construction and working of single acting, double acting hydraulic linear actuators*	*Need for intensifier in hydraulic systems, applications*	*Pneumatic Sensors types and applications*	*Cascading circuit for trapped signals : two cylinders*	*Trouble shooting of fluid power systems : problems, causes and remedies-pneumatics*
S-8	SLO-1	*Special cylinders: Tandem, Rodless, Telescopic*	*Different switches, filters, seals, fittings and other accessories used in hydraulic systems*	*Introduction to Electro Pneumatics – switches, relays, solenoids*	*Cascading circuit for trapped signals : three cylinders*	*Safety aspects involved fluid power systems*
S-9	SLO-1	*Cushioning arrangement for cylinders to reduce the impact on the cylinders, Various cylinder mountings*	*Functions, types and applications of accumulators in hydraulics*	*Constructing electrical ladder diagrams for various fluid power applications.*	*Fail-safe circuit, counter balance circuit, actuator locking*	
S-10	SLO-1	*Construction and working of Gear, Vane, Piston motors to obtain rotary motion*

Course Code	18MEE323T	Course Name	PROCESS PLANNING AND COST ESTIMATION	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC103T	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Acquire knowledge about Process planning*
CLR-2 :	*Understand Different Cost and its components*
CLR-3 :	*Learn about cost estimation of products manufactured in foundry and forging shops*
CLR-4 :	*Acquire knowledge about various cost involved in welding and sheet metal shops*
CLR-5 :	*Calculate Machining time for different process*
CLR-6 :	*Impart clear knowledge about process planning, costing, and estimation of machining time*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Design and plan for various process and various manufacturing methodologies*	1,2	90	85	H	L	H	M	H	-	-	-	-	-	-	M	H	L	H
CLO-2 :	*Estimate various cost involved in a product*	1,2	90	85	H	M	-	M	-	-	-	-	-	-	M	H	H	L	M
CLO-3 :	*Estimate cost in different manufacturing shops*	1,2	90	85	H	H	-	H	-	-	-	-	-	-	M	M	M	L	H
CLO-4 :	*Estimate cost in different fabrication shops*	1,2	90	85	H	H	-	H	-	-	-	-	-	-	M	M	M	L	H
CLO-5 :	*Estimate machining time of various metal removal operations*	1,2	90	85	H	H	-	H	-	-	-	-	-	-	M	M	M	L	H
CLO-6 :	*Familiarize in process planning, costing and estimation of machining time*	1,2	90	85	H	H	M	M	M	-	-	-	-	-	M	M	M	L	H

		Process Planning	Costing and Estimation	Estimation of costs in different shops	Estimation of costs in fabrication shops	Estimation of machining times and costs
Duration (hour)		8	9	9	9	10
S-1	SLO-1	*Production system and Types of production*	*Objectives of costing and estimation*	*Estimation in foundry shop*	*Welding, Types of weld joints, Gas welding*	*Machine shop operations, Estimation of Machining time*
S-2	SLO-1	*Standardization and Simplification*	*costing and estimation: Functions and procedure*	*Pattern cost, Casting cost*	*Estimation of Gas welding cost, Gas cutting*	*Estimation of machining time for turning, knurling and facing operations : Tutorials*
S-3	SLO-1	*Production design and selection*	*Introduction to costs, Computing material cost*	*Cost estimation in Foundry shop: Tutorials-1*	*Arc welding: Equipments, Cost Estimation*	*Estimation of machining time for reaming, threading and tapping operations : Tutorials*
S-4	SLO-1	*Process planning, Selection and analysis*	*Direct labor cost, Analysis of overhead costs*	*Cost estimation in Foundry shop: Tutorials-2*	*Cost estimation in Welding shop: Tutorials-1*	*Estimation of machining time for drilling: Tutorials*
S-5	SLO-1	*Manual/Experience based planning, Variant type CAPP*	*Expenses: Factory expenses*	*Forging: Types, Operations*	*Cost estimation in Welding shop: Tutorials-2*	*Estimation of machining time for boring : Tutorials*
S-6	SLO-1	*Generative type CAPP*	*Administrative expenses, Selling and distributing expenses*	*Estimation of Losses and time in forging*	*Estimation in sheet metal shop*	*Estimation of machining time for shaping Tutorials*
S-7	SLO-1	*Economics of process planning, case studies*	*Cost ladder ,Cost of product*	*Estimation of Forging cost*	*Shearing and forming*	*Estimation of machining time for planning Tutorials*
S-8	SLO-1	*Processes analysis, Break even analysis*	*Depreciation, Analysis of depreciation*	*Cost estimation in Forging shop: Tutorials -1*	*Cost estimation in Sheet metal shop: Tutorials - 1*	*Estimation of machining time for milling operations : Tutorials*
S-9	SLO-1		*Problems in depreciation method*	*Cost estimation in Forging shop: Tutorials -2*	*Cost estimation in Sheet metal shop: Tutorials - 2*	*Estimation of machining time for grinding operations : Tutorials*
S-10	SLO-1					*Case studies: Estimation of cost for a product*

Course Code	18MEE324T	Course Name	FOUNDRY ENGINEERING	Course Category	E	Professional Elective	L T P C	
							3 0 0 3	

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the basics of foundry, castings, limitations, patterns, materials, allowances*
CLR-2 :	*Learn design, types of mold, materials, equipment's, sand mold, core, runner, raiser air vents, gatings, methods of solidification.*
CLR-3 :	*Be familiar with the casting process, permanent mold, gravity, pressure die casting, centrifugal casting, precision, shell molding.*
CLR-4 :	*Melting, pouring, qualities issues, types of furnaces, remelting, molten metal treatment, pouring temperature, casting inspection, rectification, cause and remedies for casting defects, destructive testing, NDT, dye penetrant, magnetic particle, X-ray, elimination of dissolved gasses, use of statistical quality control in foundry.*
CLR-5 :	*Understand the Need and area for automation material handling, of raw, molten metal, storage and dispatch, overhead crane, trolley, pollution control, computers in castings and foundry.*
CLR-6 :	*Understand about castings, patterns, molds, quality control, modernization in foundry*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	Program Learning Outcomes (PLO) 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Understand the process in foundry, patterns, allowances*	*1&2*	*90*	*85*	*H*	*L*	*M*	*M*	*H*	*L*			*L*	*M*		*M*	*H*	*H*	*M*
CLO-2 :	*Learn the mold types, core making, methods of solidification*	*1&2*	*90*	*85*	*H*	*H*	*M*	*M*	*H*					*M*		*M*	*H*	*H*	*M*
CLO-3 :	*Study the various casting process*	*1*	*90*	*85*	*H*	*L*	*L*	*M*	*H*					*M*		*M*	*H*	*H*	*M*
CLO-4 :	*Gain knowledge about furnaces, and quality control in castings.*	*1&2*	*90*	*85*	*H*	*L*	*L*	*M*	*H*							*M*	*H*	*H*	*M*
CLO-5 :	*Understand the automation in foundry, for handling raw, molten metal finished products,*	*1&2*	*90*	*85*	*H*	*L*	*M*	*M*	*H*	*M*	*M*					*M*	*H*	*H*	*M*
CLO-6 :	*Learn the foundry techniques in broader sense and able to implement.*	*1&2*	*90*	*85*	*H*	*L*	*M*	*M*	*H*	*M*						*M*	*H*	*H*	*M*

		Foundry, patterns, materials, allowances.	Mold types, core making, runner and raisers,	– Different casting types, second operations, rework	Melting of metal and testing of casting and quality control	Modernization economic way of producing castings
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to foundry technology, ,*	*Types of mold*	*Types of casting process*	*Types of furnace*	*Need for modernization in foundry*
S-2	SLO-1	*Over view of Casting, patterns*	*Mold equipment's*	*Permanent molds, gravity casting*	*Selection of furnace*	*Materials handling*
S-3	SLO-1	*Patterns materials,*	*Mold and core preparation*	*Co2 process*	*Melting and remelting*	*In house metal melting and handling*
S-4	SLO-1	*allowances*	*Gatings*	*Image sharpening, Butterworth filters*	*Inspection of castings*	*Storage of raw materials,* .
S-5	SLO-1	*Castings limitations*	*Runner and raiser*	*Generation of spatial masks from frequency domain specification,*	*Defects analysis and remedies, molten metal purification.*	*work in process,* *Finished products*
S-6	SLO-1	*Tupes of patterns*	*Air vents and its importance*	*Basic steps in frequency domain filtering*	*Destructive testing, nondestructive testings.* *Magnetic particle testings, ultrasonic cell*	*Types of materials handling*
S-7	SLO-1	*Advantages of castings*	*So[idification,typesof solidification*	*Nonlinear filters, function, Max filter, Min filter*	*Quality control of castings, techniques.*	*Electric cranes and trolleys*
S-8	SLO-1	*Limitations of castings*	*Defects related to solidifications*	*Homomorphic filtering, False color, Pseudo color and its approaches and*	*Application of statistical quality control methods*	*pollution control*
S-9	SLO-1	*Assignment on casting, patterns and allowances*	*Assignment on molds, runner, riser, solidification*	*Assignments on image filtering in MATLAB/Open CV/Python*	*Assignment in furnace, casting defects* *Quality control*	*Assignment on automation,* *Materials handling,* *Materials handling equipments, pollution control*

Learning Resources	TEXT BOOKS 1. Complete casting handbook: Metal casting process, metallurgy., techniques and design-john Campbell. 2. Banga.T.R. and Agelhiarwal.R.I. Course Code	18MEE325T	Course Name	THEORY OF METAL FORMING	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Impart knowledge about various metal forming process*
CLR-2 :	*Be familiar with the stress criterion for plastic deformation*
CLR-3 :	*Attain the ability to identify the process parameters responsible for metal forming*
CLR-4 :	*Provide good exposure towards recent trends in metal forming process*
CLR-5 :	*Understand the defects and overcome with remedies*
CLR-6 :	*Be familiar with the basic science of metal forming, plastic deformation of bulk and sheet metals, in addition to acquire knowledge about the modern processes such as high velocity & super plastic forming.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1	2	3
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)
CLO-1 :	*Apply & analyze the theories involved in plastic behavior of metals*	*1&2*	*90*	*85*
CLO-2 :	*Estimate the metal working process under various conditions*	*1,2&3*	*90*	*85*
CLO-3 :	*Appreciate the types of plastic forming and equipment's used.*	*1&2*	*90*	*85*
CLO-4 :	*Utilize the various processes of sheet metal forming.*	*1&2*	*90*	*85*
CLO-5 :	*Appreciate the importance of modern metal forming processes.*	*1&2*	*90*	*85*
CLO-6 :	*Apply the theories of plasticity and inspecting methods in various metal forming processes and produce engineering components*	*1,2&3*	*90*	*85*

Program Learning Outcomes (PLO)

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1	*H*	*M*	*L*	*L*									*H*	*H*	*H*
CLO-2	*H*	*M*	*L*	*L*									*H*	*M*	*H*
CLO-3	*H*				*M*								*H*	*L*	*H*
CLO-4	*H*				*M*								*H*	*L*	*H*
CLO-5	*H*				*M*								*H*	*L*	*H*
CLO-6	*H*	*M*	*L*	*L*	*M*								*H*	*H*	*H*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Theory of plasticity: State of stress*	*Mechanics of metal working -Flow stress determination*	*Classification of rolling process, Types of rolling mills, Hot and cold rolling*	*Introduction to Sheet metal forming processes*	*Comparison with conventional forming methods*
S-2	SLO-1	*Components of Stress- Stress tensor*	*Effect of temperature in metal working*	*Forces and geometric relationship in rolling*	*Rod and wire drawing equipment*	*High Energy Rate Forming, fine blanking*
S-3	SLO-1	*Engineering stress strain relationship*	*Strain rate effects*	*Rolling of bars and shapes, Rolling defects, causes and remedies*	*Shearing, blanking, bending, stretch forming,*	*P/M forging-Isothermal forging*
S-4	SLO-1	*Flow curve and flow rules*	*Hot, cold and warm working*	*Classification of Forging process, Forging Equipment, Open and closed die forging*	*Explosive and press brake forming*	*Electrohydraulic forming*
S-5	SLO-1	*True stress and true strain*	*Metallurgical structure, Anisotropy*	*Forging defects, residual stresses*	*Deep drawing & tube drawing*	*Magnetic pulse forming*
S-6	SLO-1	*Yield criteria*	*Effects of hardening ,friction and lubrication*	*Classification of extrusion process, Variables affecting extrusion*	*Principles and process parameters*	*Rubber pad forming*
S-7	SLO-1	*Slip line field theory*	*Hydrostatic pressure*	*Hydrostatic extrusion, Production of seamless pipe and tubing*	*Sheet metal formability*	*Superplastic forming*
S-8	SLO-1	*Plastic work, Plastic anisotropy*	*Workability, Spring back*	*Deformation, lubrication and defects in extrusion*	*Formability limit diagram*	*Types of Severe plastic forming: ECAP*
S-9	SLO-1	*Plastic deformation of crystals*	*Residual stresses, Deformation processing system*	*Basics of Severe plastic deformation and its approaches*	*Defects in formed parts*	*Accumulative Roll Bonding*

Course Code	18MEE326T	Course Name	WELDING TECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with the welding power sources and welding fundamentals*
CLR-2 :	*Be familiar with the fusion welding processes*
CLR-3 :	*Be familiar with the solid-state welding processes*
CLR-4 :	*attain the knowledge about welding metallurgy*
CLR-5 :	*attain the knowledge about brazing and soldering technology*
CLR-6 :	*Understand the concept of weldability, weld quality, welding defects and welding inspection*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand the fundamentals of welding processes and to recognize the importance of arc physics , weld protection*	1 & 2	90	85	H	M	L	M	-	-	M	M	-	-	-	-	H	L	M
CLO-2 :	*Understand the fusion welding processes and to recognize the various types of fusion techniques and be able to apply those techniques for any work*	1, 2 &3	90	85	H	M	M	H	M	-	H	M	-	-	-	-	H	M	H
CLO-3 :	*Understand the solid-state welding processes and to recognize the various types of solid-state techniques and be able to apply those techniques for any work*	1, 2 &3	90	85	H	M	M	H	M	-	H	M	-	-	-	-	H	H	H
CLO-4 :	*Obtained the knowledge about welding metallurgy and be able to apply the principle of metallurgy to recognize weld joint microstructure*	1, 2 &3	90	85	H	H	-	H	-	-	H	M	-	-	-	-	H	M	M
CLO-5 :	*Understand the concept of brazing and soldering techniques and able to apply the concept to critical welding aspects*	1 & 2	90	85	H	L	L	L	-	-	M	M	-	-	-	-	H	L	M
CLO-6 :	*Understand the concept of weldability, weld quality, and welding defects, acquire the knowledge of welding inspection and testing and be able to apply the concept to identify any weld defects*	1, 2 &3	90	85	H	H	M	H	L	-	M	M	-	-	-	-	H	M	H

		Welding Fundamentals & Basic Fusion Welding Processes	Advanced Fusion Welding Processes	Solid-State Welding Processes	Welding Metallurgy	Weld Quality & Inspection
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Manufacturing and Joining, Welding, Need for welding, Applications, Advantages and Disadvantages*	*Fundamentals of gas metal arc welding, process variables, effect of filler metals on weld*	*Fundamental aspects of solid state processes, common process variables, bonding mechanism*	*Basic solidification concepts, solidification modes and constitutional supercooling, dendrite and cell spacing*	*Design of weldments, Concept of weldability*
S-2	SLO-1	*Fundamental Mechanisms of welding, Classifications of welding process*	*Fundamentals of gas tungsten arc welding, process variables, flux*	*Fundamentals of forge welding, characteristics, application*	*Epitaxial and nonepitaxial growth, effect of welding parameters, weld metal nucleation mechanisms*	*Weldability of ferrous and nonferrous alloys, Weldability test method*
S-3	SLO-1	*Heat Input and Power density of different welding processes, Cooling rate effect*	*Pulsed TIG Welding process, process variables*	*Fundamentals of roll bonding, characteristics, application*	*Dissimilar welds: issues and solutions*	*Fundamental concepts of residual stress and distortion,*
S-4	SLO-1	*Weld protection, Shielding gas, Flux, Types of flux coatings*	*Cold metal transfer welding process , Process Variables*	*Fundamentals of ultrasonic welding, characteristics, application*	*Weld Thermal Cycle*	*Welding defects, classification and characteristics*
S-5	SLO-1	*Principle of Fusion welding process, Gas welding process, Types of flames in gas welding process*	*Fundamentals of flux cored arc welding, process variables, electrode classification*	*Fundamentals of friction welding, characteristics, application*	*Heat affected zone thermal cycle*	*Solidification crack, Hydrogen induced crack*
S-6	SLO-1	*Shielded Metal arc welding process, welding variables, electrode classification, Physics of welding arc, polarity*	*Fundamentals of submerged arc welding, process variables, flux*	*Fundamentals of friction stir welding, process variables, application*	*Post weld heat treatment of weldments: Need and selection of PWHT parameters*	*Destructive testing of welded joints, tensile and hardness*

S-7	SLO-1	*Volt - Ampere Characteristics: Constant current, constant voltage and alternating current*	*Fundamentals of plasma arc welding, process variables, Hybrid Plasma TIG process.*	*Friction stir welding tools, effect of tool geometry*	*Formation of heat affected zone, recrystallization and grain growth*	*Destructive testing of welded joints, toughness, fatigue and creep*
S-8	SLO-1	*Arc characteristics: Arc plasma, effect of temperature, Arc distribution, Arc blow*	*Fundamentals of resistance welding, process variables, types*	*Fundamentals of explosive welding, characteristics, application*	*Fundamental concepts of brazing, characteristics, applications*	*Concept of non-destructive testing, classification*
S-9	SLO-1	*Fundamentals of weld bead geometry, Types of welded joints, Welding positions and welding processes*	*Fundamentals of laser beam welding, process variables, Hybrid laser welding process*	*Fundamentals of diffusion bonding process, process variables, applications*	*Fundamental concepts of soldering, characteristics, applications*	*Concept of Radiography, dye penetration and Ultrasonic test*

							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	PSG Tech "Design Data Book" Kalaikathir Achchagam Coimbatore		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with Fundamentals of material handling and intraplant transporting facilities*
CLR-2 :	*Be familiar with Common material handling systems*
CLR-3 :	*Be familiar with automated feeding mechanism and design*
CLR-4 :	*Be familiar with Unit Built Machines (UBM), Automated systems in transfer lines*
CLR-5 :	*Be familiar with Transfer mechanisms, conveyors, part feeding devices*
CLR-6 :	*Be familiar with material handling equipments,and their automated systems*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Understand about Fundamentals of material handling and intraplant transporting facilities*	1	90	85	H	M	L	L	L							M	H	H	M
CLO-2 :	*Acquire knowledge on Common material handling systems*	1&2	90	85	H	M	M	M	H							M	H	L	M
CLO-3 :	*Acquire knowledge on automated feeding mechanism and design*	1&2	90	85	H	L	M	M	H							M	H	L	M
CLO-4 :	*Understand the Automated systems in transfer lines*	1&2	90	85	H	L	M	M	H							M	H	H	M
CLO-5 :	*Understand Transfer mechanisms, conveyors, part feeding devices*	1	90	85	H	L	M	M	H							M	H	L	H
CLO-6 :	*Understand material handling equipments, and their automated systems*	1&2&3	90	85	H	L	M	M	H							M	H	H	H

		Introduction	Common Material Handling Equipment	Automation of Material Handling	Classification of Automated System	Automated Material Handling Equipment
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to work handling concepts - types of intraplant transporting facility*	*Concepts of Unit Loads, Material handling and Storage*	*Automated feeding arrangements for discrete parts*	*Concepts of Unit Built Machines (UBM)*	*Automated handling and storage systems in manufacturing environment*
S-2	SLO-1	*Principles of material handling-manual and mechanical handling*	*Equipments operation and selection*	*Design based in work piece requirements, orienting methods*	*Gain lean and green endorsement, collaboration to achieve lean and green goals*	*Rail Guided Vehicles (rgvs), Automated Guided Vehicles (agvs)*
S-3	SLO-1	*Principle groups of material handling*	*Containers, Pallets, Conveyor systems, Industrial trucks, Wagon tipplers*	*One by one feeding, agonizing, stapling etc*	*Classification and elements, Power Units, self-contained and separate feed type, Change over UBM*	*Applications of rgvs and agvs, Automated Storage and Retrieval Systems (AS / RS)*
S-4	SLO-1	*Choice of material handling equipment, hoisting equipment*	*Transporters, stackers, reclaimers*	*Feeding continuous material liquids, granules etc*	*Transfer lines – classification and their components*	*AS / RS in the Automated factory*
S-5	SLO-1	*Surface and overhead equipment-General characteristics of overhead equipments and their application*	*Silos & hoppers and their accessories, Ropeways, Ship loaders, Cable cranes*	*Automated assembly system, elements,*	*Automated systems for handling and transfer of prismatic, axis symmetric parts and asymmetric parts in transfer lines*	*Considerations for planning an AS /RS system, Applications of AS / RS*
S-6	SLO-1	*Introduction to control of hoisting equipments*	*Container handling systems, Electric lifts*	*Automated assembly system ,configuration design, details and control*	*Case studies on transfer lines – interlocked*	*Principles of work holding devices – Modular fixturing*
S-7	SLO-1	*Storage – open and closed storage systems*	*Hoists, EOT cranes, Elevators*	*Special feeding mechanisms*	*Case studies on palletized and flexible inter linkage transfer lines*	*Flexible fixturing systems*
S-8	SLO-1	*Bulk loading, Unloading, Shipping*	*Material handling equipments in Steel mills, Power plants, Mines, Automobile and Transport Industries*	*Automated inspection and their design*	*Control systems for flexible inter linkage transfer lines*	*Fixturing for FMS*
S-9	SLO-1	*Receiving systems and operations-First in first out(FIFO),last in first out(LIFO)*	*Large scale Constructions etc. Case Study for All Above Mentioned Handling systems.*	*Case study for automated material handling.*	*SWARF handling and disposal systems*	*Robots and their applications in handling and storage*

		Basics of Non-Traditional Machining and Mechanical Energy Techniques-I	Mechanical Energy Techniques-II	Chemical and Electro Chemical Techniques	Thermo Electrical Energy Techniques	Thermal Energy Techniques
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction of non-traditional machining*	*Operating principles and equipment of water jet machining*	*Fundamentals, operating principle, advantages, limitations, applications of chemical machining process.*	*Operating principles and equipment of electrical discharge machining*	*Operating principle and equipment of electron beam machining*
	SLO-2	*Difference between traditional and non-traditional machining*	*Process parameters, applications, advantages and limitations of water jet machining*	*Classification and selection of Etchant and maskant*	*Subsystems of electrical discharge machining*	*Generation and control of electron beam*
S-2	SLO-1	*Need for non-traditional machining*	*Operating principles and equipment of abrasive water jet machining*	*Operating principles, equipment and subsystems of electrochemical machining*	*Power circuits and electrode feed mechanism in electrical discharge machining*	*Parameters influencing metal removal in electron beam machining*
	SLO-2	*Machining characteristics and classification of non-traditional machining*	*Mechanism of metal removal in abrasive water jet machining*	*Material removal rate and tool design in electrochemical machining*	*Process parameters, selection of tool electrode in electrical discharge machining*	*applications, advantages and limitations of electron beam machining*
S-3	SLO-1	*Consideration in process and material selection.*	*Parameters influencing metal removal rate*	*Tool Material, Tool Feed System, Design For Electrolyte Flow*	*Dielectric fluids and flushing methods in electrical discharge machining*	*Operating principle and equipment of plasma arc machining*
	SLO-2	*Applications of non-traditional machining*	*Applications, advantages and limitations of abrasive water jet machining*	*Process parameters in electrochemical machining*	*Characteristics of spark eroded surface*	*Gas mixture, Types of Torches of plasma arc machining*
S-4	SLO-1	*Operating principle, elements and equipment of Ultrasonic machining*	*Operating principle and equipment of abrasive flow machining*	*Problems for estimation of material removal rate in electrochemical machining*	*Recast layer formation*	*Parameters influencing metal removal in plasma arc welding*
	SLO-2	*Tool feed Mechanism*	*Mechanism of metal removal in abrasive flow machining*	*Advantages, limitations, applications and recent development of electrochemical machining*	*Surface finish and machining accuracy in electrical discharge machining*	*Applications, advantages and limitations of plasma arc machining*

S-5	SLO-1	*Cook's model for material removal*	*Process parameters in abrasive flow machining*	*Operating principle and equipment of electro chemical grinding*	*Tool Electrode design, Tool wear characteristics of spark eroded surfaces*	*Operating principle and equipment of laser beam machining*
	SLO-2	*Problems in estimation of Material removal rate (MRR) for Ultrasonic machining*	*Classification of abrasive flow machining, Applications, advantages and limitations of abrasive flow machining*	*Metal removal rate and process parameters in electro chemical grinding*	*Problems in estimation of material removal rate in electrical discharge machining*	*Process Characteristics and Thermal Features of laser beam machining*
S-6	SLO-1	*Process parameters of Ultrasonic machining*	*Operating Principle of magnetic abrasive machining*	*Problems for estimation of metal removal rate in electro chemical grinding*	*Operating principle of wire cut electrical discharge machining*	*Types of lasers used in laser beam machining*
	SLO-2	*Applications, Advantages and limitations of Ultrasonic machining*	*Elements and equipment of magnetic abrasive machining*	*Process Characteristics of electro chemical grinding*	*Equipment of wire cut electrical discharge machining*	*Parameters influencing metal removal, applications, advantages and limitations of laser beam machining*
S-7	SLO-1	*Operating Principle of Abrasive jet machining*	*Mechanism of metal removal in magnetic abrasive machining*	*Benefits, limitations and applications of electro chemical grinding*	*Process parameters of wire cut electrical discharge machining*	*Operating principle and equipment of Ion beam machining*
	SLO-2	*Elements and equipment of Abrasive jet machining*	*Process parameters of magnetic abrasive machining*	*Recent developments in electro chemical grinding process*	*Advantages, limitations and applications of wire cut electrical discharge machining*	*Process Characteristics of Ion beam machining*
S-8	SLO-1	*Mechanism of metal removal in Abrasive jet machining*	*Applications, advantages and limitations of magnetic abrasive machining*	*Electrochemical Drilling*	*Operating principles and equipment in electrical discharge grinding*	*Material removal rate, Accuracy and surface effects in Ion beam machining*
	SLO-2	*Process parameters of Abrasive jet machining*	*Process capabilities of magnetic abrasive machining*	*Electro Stream (Capillary) and Electrochemical jet drilling.*	*Process parameters, surface finish and machining accuracy in electrical discharge grinding*	*Parameters influencing metal removal rate*
S-9	SLO-1	*Process capabilities of Abrasive jet machining*	*Operating Principle of Ice jet machining*	*Fundamentals of electro chemical honing*	*Machine tool selection*	*Applications, advantages and limitations of Ion beam machining*
	SLO-2	*Applications, Advantages and limitations of Abrasive jet machining*	*Process description of Ice jet machining*	*Fundamentals of deburring process*	*Application and recent developments in electrical discharge grinding*	*Recent developments and trends in Thermal energy based non-traditional machining techniques*

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with the modern casting methods*
CLR-2 :	*Know the modern methods of manufacturing from powders*
CLR-3 :	*Be familiar with the micro-electronic manufacturing*
CLR-4 :	*Acquire knowledge about polymers and composites manufacturing*
CLR-5 :	*Learn the methods of rapid prototyping and additive manufacturing*
CLR-6 :	*Be acquainted with manufacturing approaches of modern intricate products*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Acquire knowledge of modern and non-conventional casting methods for manufacturing complex intricate shapes of metals*	*1 & 2*	*90*	*85*	*H*				*L*		*M*						*H*		*H*
CLO-2 :	*Understand the manufacturing methods using powders of metals and ceramics*	*1 & 2*	*90*	*85*	*H*				*M*		*M*						*H*		*H*
CLO-3 :	*Get acquaintance with manufacturing methods of semiconductors and microelectronic devices*	*1, 2,3*	*90*	*85*	*H*				*H*		*L*						*H*		*M*
CLO-4 :	*Obtain knowledge of polymers and composites manufacturing methods*	*1 & 2*	*90*	*85*	*H*						*L*						*H*		*H*
CLO-5 :	*Understand the purpose and methods of rapid prototyping and additive manufacturing*	*1 & 2*	*90*	*85*	*H*				*H*								*H*		*M*
CLO-6 :	*Identify suitable methods for various product manufacturing*	*1, 2 ,3*	*90*	*85*	*H*				*H*		*L*						*H*		*M*

		Modern Casting Methods	Modern Forming Methods	Manufacturing Of Semiconductors And Electronic Deivices	Manufacturing Of Composite Materials	Rapid Proptotyping And Additive Manufacturing
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to conventional and modern casting methods*	*High speed metal forming- Explosive, Electromagnetic and electrohydraulic*	*Semiconductors and silicon-Introduction, Structure of silicon, Properties*	*Selection of composite matrices and reinforcements*	*Rapid prototyping - Introduction, Steps in RP Technology, STL Format, Support Structures*
S-2	SLO-1	*Expendable pattern casting - Pattern making process, Advantages, Applications*	*Semisolid metal forming Types (Thixocasting, Rheocasting, Thixomolding) Advantages, Applications*	*Crystal growing and wafer preparation*	*Overview of polymer matrix composites, Types of reinforcements, Preforms, Prepegs*	*Rapid prototyping- Advantages, Limitations, Applications*
S-3	SLO-1	*Plaster mold casting – Conventional and Antioch Process, Advantages, Applications*	*Peen forming of sheet metals - Process, Advantages, Applications*	*Film deposition -Evaporation, Sputtering, CVD*	*Open mould processes - Hand lay-up, Spray-up, Vacuum Bagging, Automated tape -laying machines*	*Introduction to Additive Manufacturing for product development – Advantages, Materials*
S-4	SLO-1	*Ceramic mold casting - Process, Advantages, Applications*	*Super plastic forming - Material requirements, Advantages, Disadvantages*	*Oxidation - Dry oxidation, Wet oxidation*	*Closed mould processes - Compression moulding, Transfer moulding, Injection moulding*	*Stereo lithography*
S-5	SLO-1	*Vacuum casting - Process, Advantages, Applications*	*Design consideration for Powder Metallurgy forming*	*Lithography - Photolithography process*	*Filament winding, Pultrusion, Pulforming, Cutting of FRP*	*Laminated object manufacturing*
S-6	SLO-1	*Squeeze casting - Process, Advantages, Applications*	*Production of metal powders Atomization, Reduction, Electrolytic Deposition, Carbonyls, Comminution, Mechanical Alloying*	*Etching - Wet chemical etching, Dry plasma etching, Cryogenic dry etching*	*Fabrication of metal matrix composites-Liquid state and Solid state*	*Selective laser sintering*
S-7	SLO-1	*Rapid solidification for amorphous alloys, Melt Spinning Process*	*Sintering, Finishing of sintered parts, Secondary and finishing operations*	*Diffusion, Drive-in Diffusion and Ion implantation*	*Deposition technique for MMC, Insitu composites*	*Fused deposition modeling*
S-8	SLO-1	*Casting techniques for single crystal components*	*Ceramic forming -casting, powder*	*Metallization - Requirement, Methods and testing*	*Conventional manufacturing of ceramic composites, Prepeg formation-slurry impregnation*	*Solid ground curing, 3D ink jet printing*

S-9	SLO-1	*Conventional casting of Turbine blades, Directional solidified blades, Single crystal blades*	*Forming and shaping glass-Flat Sheet, Rods and Tubes, Discrete Products, Glass Fiber*	*Bonding and packaging, MEMS, NEMS*	*Porous preform infiltration- Melt, Sol-gel, Polymer, Reactive liquid, Chemical vapour, Directed oxidation*	*Additive manufacturing-Applications*

CLO-6 :	*Understand about production systems, group technology coding and FMS, FMC systems*	*1,2*	*90*	*85*	*H*	*H*	*H*	-	-	-	-	-	-	-	-	-	*M*	*L*	*M*

		Production systems	Group technology and FMS	Flexible Planning	Flexible Manufacturing Cells	FMS Software
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Types of production systems job, batch and mass production system with examples*	*Introduction to GT, Formation of part families*	*Physical planning for FMS, Objective, guide line*	*Introduction of cell description and its classifications*	*Introduction to Different FMS software's and advantages*
S-2	SLO-1	*Different manufacturing functions, Manufacturing support*	*Part classification methods and different coding systems with examples*	*Need for flexibility and FMS in industries*	*Definition of unattended machining, Requirement and features.*	*General structure and Requirements for FMS software*
S-3	SLO-1	*Organization and information processing in manufacturing.*	*Production flow analysis methods, Machine cell design, Clustering algorithm.*	*User supplier responsibilities in planning, user – supplier role in site preparation.*	*Component handling and storage systems*	*Functional descriptions and operational overview*
S-4	SLO-1	*Different types of plant layouts and advantages of each layout.*	*Bond Energy algorithm method with example*	*Machine tool selection and layout of FMS.*	*Difference between Cellular system and FMS system*	*FMS installation*
S-5	SLO-1	*Plant location selection methods with examples*	*Scheduling and control in cellular manufacturing*	*Computer control system and different Data files, Reports and planning the FMS system.*	*FMC hardware configuration and controllers*	*Acceptance testing, Performance goals*
S-6	SLO-1	*Work in progress inventory models*	*System planning guide lines and sizing and human resources.*	*Human resources for FMS, Objective, staffing, supervisor role.*	*PLC and computer controllers, Different FMC Communication networks*	*FMS application in machining, sheet metal fabrication*
S-7	SLO-1	*Scheduling and its types and advantages*	*Industrial case study for total parts moving to machine cell and machine cell formation, Manufacturing cell*	*Quantitative Analysis methods for FMS, Simple problems for FMS System analysis.*	*A case study for modular control design method for a flexible manufacturing cell.*	*Prismatic component production*
S-8	SLO-1	*Simple problems in selection of plant location.*	*Introduction to FMS, components of FMS.*	*Benefits and limitations for FMS system*	*Lean manufacturing with example*	*FMS development towards factories of the future*
S-9	SLO-1	*Design the different layouts like automobile plant and supermarket and hospitals and airport…etc*	*FMS need and types FMS systems.*	*Simple example of FMS planning for Automobile plant.*	*Agile manufacturing and example case study*	*Example case study for FMS*

Duration (hour)		8	9	9	9	10
S-1	SLO-1	*Definition of manufacturing, Impact of manufacturing in environmental ecology*	*Principles of green manufacturing and its efficiency*	*Introduction to Multi attributes decision making methods*	*Question wasteful practices*	*Design resources saving into product and processes*
S-2	SLO-1	*Role of manufacturing sector in national growth*	*Green manufacturing and sustainability*	*definition, structure for Multi attributes decision making methods*	*Gain lean and green endorsement, collaboration to achieve lean and green goals*	*Closed loop & Open Loop production system*
S-3	SLO-1	*Technological change and evolving risk*	*System model architecture and module*	*variants and analysis of different methods like Simple Additive Method (SAM)*	*Track progress for environment and profits*	*Green manufacturing through clean energy supply*
S-4	SLO-1	*concepts of "green" manufacturing need of green manufacturing*	*Design and planning, control or tools for green manufacturing (Qualitative Analysis)*	*Weighted Product Method (WPM)*	*Creation of sustainable growth*	*Various case studies of implementation of semiconductors manufacturing at industries*
S-5	SLO-1	*Green manufacturing strategies*	*Consumption Analysis, Life Cycle Analysis, Efficiency, Sustainability tools).*	*Analytic Hierarchy Process (AHP)*	*Enabling techniques for assuring green manufacturing*	*Green packaging and supply chain*
S-6	SLO-1	*Green manufacturing – motivation, barriers, regulation, policy*	*Standards for green manufacturing (ISO 14000 and OHSAS 18000)*	*Technique for Order of Preference by Similarity to Ideal Solution (TOPSIS), Grey Relation Analysis (GRA)*	*Drivers of green manufacturing, impact, advantages and disadvantages of drivers*	*Various case studies of implementation of Optimizing Logistics solution at industries*
S-7	SLO-1	*Casting defects and remedies.*	*Waste stream mapping and application*	*Elimination and Choice Expressing Reality (ELECTRE)*	*Green architecture and buildings, Sustainable manufacturing resources management*	*Environmental implication of Nano manufacturing*
S-8	SLO-1	*Advantages and limitations of green manufacturing*	*Identify and apply the concepts of product and process design with environmental forethought*	*VIKOR method*	*Carbon footprint analysis and management of manufacturing processes*	*Various case studies of implementation of lean manufacturing at industries*
S-9	SLO-1	*Significance of green manufacturing*	*Design for environment and for sustainability - Discuss the Product Life Cycle of manufactured goods.*	*Problems based on different MADMs. 1 C 3 3,4*	*Green Process Economics, Resource Recovery and Reuse*	*Various case studies of implementation of Optimizing process or product at industries*

Course Code	18MEE422T	Course Name	ADDITIVE MANUFACTURING TECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with the evolution of Additive manufacturing (Why it is disruptive in nature based on evolution) and the materials and design involved*
CLR-2 :	*Be familiar with the various process steps involved in Additive manufacturing (Generic process flow for AM systems)*
CLR-3 :	*Learn the various types of machines and systems involved in Additive manufacturing*
CLR-4 :	*Know the working of powder based Additive manufacturing processes and their applications and limitations*
CLR-5 :	*Know the working of solid and liquid based Additive manufacturing processes and their applications and limitations (Understanding the feedstock material in various AM process)*
CLR-6 :	*Be familiar with components of Additive manufacturing and its applications in industries (Understanding the requirement of process certification for various industrial applications) – Fabrication and repair applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Understand the basic concepts of Additive manufacturing (Why they are classed as disruptive technology(ies)*	*1&2*	*90*	*85*	*H*														
CLO-2 :	*The knowledge acquired on the process chain of Additive manufacturing and the various steps involved (Opportunities of implementation in India, global relevance of AM in supply chain – The concepts of Remanufacturing)*	*1&2*	*90*	*85*	*H*		*M*		*H*							*M*	*H*	*H*	
CLO-3 :	*Recognize the various machines and systems involved in Additive manufacturing and understand their role (in industrial application – fabrication or repair of component)*	*1*	*90*	*85*	*H*	*M*	*M*	*H*	*H*							*M*	*H*	*H*	
CLO-4 :	*Understand the major solid and liquid based Additive manufacturing processes such as stereolithography and fused deposition modeling and recognize their application and potential*	*1&2*	*90*	*85*	*H*	*M*	*M*	*H*	*H*							*M*	*H*	*H*	
CLO-5 :	*Understand the major powder based Additive manufacturing processes such as 3D printing (Directed Energy deposition, powder bed fusion)and electron beam melting, Binder jetting and recognize their application and potential in fabrication and repair for various industrial application*	*1&2*	*90*	*85*	*H*	*M*	*M*	*H*	*H*							*M*	*H*	*H*	
CLO-6 :	*Recognize the importance of Additive manufacturing and its various processes and systems – Industry specific (such as Aerospace, power generation, heavy machinery, Automotive)*	*1&2*	*90*	*85*	*H*														

		Introduction To Additive Manufacturing	Process Chain Of Additive Manufacturing	Machines And Systems Of Additive Manufacturing	Solid And Liquid Based Additive Manufacturing	Powder Based Additive Manufacturing
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Evolution of Additive manufacturing, Need, Comparison with CNC machining (Concepts of Hybrid manufacturing & applications)*	*Conceptualisation, Synergistic interaction of processes (AM + CNC/Adaptive)*	*Introduction to various machines and systems of Additive manufacturing (based on feedstock material, based on energy used, application)*	*Classification (scale of printing)*	*Classification (scale of printing)*
S-2	SLO-1	*Basic principles of additive manufacturing (Complex interaction of process, design and materials)*	*CAD model preparation, CAM operations (Tool path generation)*	*Construction of CNC machines, Process chamber (Subtractive process conversion to AM process)*	*Guidelines for process selection*	*Powder fusion mechanisms: solid-state sintering, Chemically induced sintering*
S-3	SLO-1	*Classification of Additive manufacturing processes*	*Part orientation and support generation*	*Energy Delivery: Lasers and electron beam, plasma arc, kinetic energy (cold spray in AM)*	*Fused deposition modeling - Processes and principle*	*Selective laser sintering: process, principles*
S-4	SLO-1	*Materials for Additive manufacturing (selection of feedstock materials)*	*Conversion to Stereolithographic file format*	*Material delivery: Powder feeding and wire feeding systems (difference in powder and wire feedstock – adantages and limitations for both), handling of feedstock material*	*Advantages, applications*	*Advantages, applications*

S-5	SLO-1	*Designing for Additive manufacturing (Design optimization)*	*Transfer to Additive manufacturing machine and file manipulation*	*Rapid tooling equipment: direct and indirect methods*	*Laminated object manufacturing*	*3D printing: process, principles*
S-6	SLO-1	*Role of Additive manufacturing in product development (Complex geometry requirements, strength to weight requirements)*	*Machine setup and build, Health & Safety practice (best practice), Feedstock material handling*	*Post processing equipment: support material removal , preparation for use as a pattern*	*Stereolithography apparatus: processes and principle*	*Advantages, applications*
S-7	SLO-1	*Advantages, Disadvantages, Applications and Opportunities of Additive manufacturing (Opportunities in Indian industries, global prospective)*	*Removal and clean up, Health & Safety practice (best practice),*	*Temperature, humidity, oxygen level controllers (process monitoring, affect on mechanical and microstructural properties with these variables)*	*Advantages, applications*	*Laser engineered net shaping (LENS process, unique advantages on hybrid scale), process control advantages, limitations,*
S-8	SLO-1	*Emerging trends and business models (Concepts of Remanufacturing)*	*Post processing (insitu or external transformative post processing such as heat treatments), machining*	*Scanning: Raster scan, patterned vector scanning*	*Challenges in solid and liquid AM processes*	*Electron beam melting*
S-9	SLO-1	*Related technologies: Reverse engineering, Computer aided engineering, AM process simulation concepts, preditive modelling*	*Property enhancement by thermal and non-thermal methods (In relation to type of material)*	*Post processing: surface texture, accuracy and aesthetic improvement*	*Case study (with relevance to technology certification)*	*Case study (with relevance to technology certification)*

Course Code	18MEE423T	Course Name	PRECISION ENGINEERING	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the concept of accuracy and precision in various parametric testing*
CLR-2 :	*Realize the striving need for precision and applications*
CLR-3 :	*Know the causes for dimensional and geometrical characteristics errors prior and during machining*
CLR-4 :	*Impart knowledge about basics of precision and ultra precision machining methods*
CLR-5 :	*Be familiar with different precision measuring systems at micro/nano level*
CLR-6 :	*Be familiar with the various lithography techniques*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Acquire knowledge about the basics of accuracy and alignment tests*	1&3	80	85	H				M		M					H	M		H
CLO-2 :	*Identify the dimensional and geometrical errors prior and during machining*	1&2	70	85	H	L			M								M		M
CLO-3 :	*Deepen the knowledge of static stiffness and thermal effects*	1, 2&3	75	85	H	L		M	M								H	M	
CLO-4 :	*Understand the principles of precision machining and importance of digitization in micro-machining*	1,2&3	85	85	H	H	L	M	M		M		L			H	H		H
CLO-5 :	*Understand the principles of nano measuring systems*	1&2	80	85	M			M	H		L		M			M			M
CLO-6 :	*Understand the principles of various lithographic techniques and currently emerging microscopic techniques*	1&2	80	85	M	H	L	M	M		M		L			H	H		H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*General concept of accuracy, repeatability and precision; Spindle rotation accuracy*	*Static stiffness*	*Introduction to precision Engineering and need for having high precision*	*Introduction to nanotechnology and need for measurement in nanotechnology*	*Nano Lithography*
S-2	SLO-1	*Test methods for displacement accuracy*	*Nature of deformation in a machine tool*	*Precision machining and finishing operations*	*Measuring Systems for Nano-manufacturing*	*Photolithography*
S-3	SLO-1	*Dimensional wear of cutting tools*	*Overall stiffness of a lathe*	*Ultra-precision Processes*	*In - process measurement of position of processing point*	*Electron beam lithography*
S-4	SLO-1	*Accuracy of NC systems, Clamping errors, Setting errors*	*Compliance of work piece*	*Tool Materials for Precision Machining: Carbides, Ceramic, Diamond, Cubic Boron Nitride*	*Post process and online measurement of dimensional features*	*Ion Beam lithography*
S-5	SLO-1	*Location of rectangular prism, cylinder*	*Errors due to the variation of the cutting force and total compliance*	*Ultra-Precision Machine Elements*	*Mechanical measuring systems*	*Optical lithography*
S-6	SLO-1	*Basic type of tests, Measuring instruments used for testing machine tools*	*Case study: Errors caused by cutting force deformation in turning and milling*	*Machining of micro-sized components*	*Optical measuring systems*	*LIGA process*
S-7	SLO-1	*Alignment, Straightness, Flatness tests*	*Study of thermal effects on machine tool accuracy*	*Positioning mechanisms and drives – precision gears, servo control systems, electromagnetic and piezo actuators*	*Electron beam measuring systems*	*Nanocoatings*
S-8	SLO-1	*Parallelism, Squareness tests*	*Methods of decreasing thermal effects*	*Micro- electro-Mechanical Systems: Characteristics and Principles, Materials, and Fabrication processes*	*X-ray imaging systems*	*Micro-metrology*
S-9	SLO-1	*Circularity, Cylindricity tests*	*Influence of vibration and noise on accuracy*	*Emergence of digital precision machining*	*Pattern recognition and inspection systems*	*Microscopy techniques for materials characterization: Electron microbe analysis and atom probe tomography*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the overview, constituents, classifications, and advanced applications of composites*
CLR-2 :	*Understand the mechanics and performance of composite materials*
CLR-3 :	*Understand the manufacturing techniques and inspection of various composite materials*
CLR-4 :	*Learn to test and understand the failure, and analysis methods of laminated composites and their constituents and analyze the characteristics of laminated composites*
CLR-5 :	*Learn design aspects and acquiring knowledge on material selection for advanced engineering composite materials.*
CLR-6 :	*Understand the applications, performance, inspection of composites*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Familiar with the Overview, constituents, classifications, and advanced applications of composites and composites mechanics*	*1& 2*	*90*	*85*	*H*				*M*										
CLO-2 :	*Familiar the mechanics and performance of composite materials*	*1& 2*	*90*	*85*	*H*	*H*													
CLO-3 :	*Familiar with the manufacturing techniques and inspection of various composite materials*	*1& 2*	*90*	*85*	*H*		*M*	*L*											
CLO-4 :	*Familiar with the testing and understand the failure, and analysis methods of laminated composites and their constituents and analyze the characteristics of laminated composites*	*1& 2*	*90*	*85*		*M*	*H*		*M*										
CLO-5 :	*Familiar with the Design and select the material for advanced engineering composite materials.*	*1& 2*	*90*	*85*	*H*		*H*	*M*	*M*										
CLO-6 :	*Familiar with overview, performance, applications and inspection of composites*	*1&2*	*90*	*85*	*H*		*H*	*M*	*L*										

		Overview of Composites	Mechanics and Performance	Manufacturing	Testing and Analysis	Design and Material selection
Duration (hour)		9	9	9	9	9
S-1	SLO-1 & 2	*Introduction to composites - Definitions Classification of composite materials*	*Introduction to solid mechanics - lamina and laminates*	*Overview of composite manufacturing processes*	*Fiber test, Neat resin matrix test Tensile, compressive test In-plane shear, Interlaminar shear tests Flexural, Interlaminar fracture, Fiber/Matrix interface tests*	*Failure predictions in a Unidirectional Lamina*
S-2	SLO-1 & 2	*Polymer matrix Ceramic matrix,*	*Mechanics terminology Interlaminar stresses*	*Overview of glass fibre production*	*Analysis of an orthographic lamina*	*Failure predictions for Unnotched Laminates*
S-3	SLO-1 & 2	*Metal matrix; Special composites - Functionally graded materials*	*Unidirectional and angle lamina and laminates*	*Carbon fiber production*	*Analysis of an orthographic laminates*	*Laminated Design Consideration*
S-4	SLO-1 & 2	*Characteristics of composite materials Mechanical behavior of composite materials*	*Engineering constants of an angle lamina and laminates*	*Spray-up, Hand lay-up*	*Hooke's law, stiffness and compliance matrices*	*Bonded joints; Bolted joints; Bonded-Bolted joints*
S-5	SLO-1 & 2	*Structural Materials Constituent materials for composite materials*	*Static Mechanical Properties Hooke's law for different types of materials*	*Filament winding Fiber placement*	*Strengths of orthographic lamina*	*Design requirements and design failure criteria*
S-6	SLO-1 & 2	*Matrix materials – types and properties Reinforced materials– types and properties*	*Effective modulus in stress-strain*	*Closed-mould processes, Bag Moulding*	*Stress analysis of laminated composite beams*	*Design load definitions Design analysis philosophy for composite structures*

S-7	SLO-1 & 2	*Fibers for advanced composites* *Current and potential advantages of fiber-reinforced composite materials*	*Symmetry in stress-strain*	*Compression moulding, Pultrusion, and Other manufacturing processes*	*Stress analysis of laminated composite Plates*	*Laminate optimization Design examples*
S-8	SLO-1 & 2	*Applications of composite materials* *- Military aircraft, Civil aircraft*	*Fatigue and Impact properties and Environmental effects*	*Quality Inspection method*	*Stress analysis of laminated composite Shells*	*Materials selection criteria* *Different material section factors*
S-9	SLO-1 & 2	*- Automotive applications, Commercial applications,*	*Fracture Behavior and Damage Tolerance*	*Composite defects, detection and possible solution*	*Free vibration*	*- Fiber selection factor* *- Matrix selection factor - Importance of constituents*

Course Code	18MEE427T	Course Name	GLOBAL OPTIMIZATION ALGORITHMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with evolutionary algorithm*
CLR-2 :	*Be familiar with particle genetic algorithm*
CLR-3 :	*Be familiar with modern optimization techniques*
CLR-4 :	*Be familiar with search algorithms*
CLR-5 :	*Be able to apply the knowledge of optimization in mechanical engineering applications*
CLR-6 :	*Be familiar with evolutionary algorithm, genetic algorithm, modern optimization techniques, search algorithms and optimization applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Recall the concepts of optimality criteria for various types of optimization problems.*	*1*	*90*	*85*	*H*				*M*				*H*	*H*	*M*		*H*	*H*	*M*
CLO-2 :	*Understand the problems*	*2*	*90*	*85*	*H*	*H*		*H*	*M*	*M*			*M*	*H*	*H*		*H*	*H*	*M*
CLO-3 :	*Apply the methods of optimization to solve real life problems*	*3*	*90*	*85*	*H*	*H*	*H*	*H*	*H*	*M*		*M*	*M*	*M*	*M*		*H*	*H*	*M*
CLO-4 :	*Analyze the methodology followed and test the results*	*4*	*90*	*85*	*H*	*H*	*H*		*H*		*M*				*M*		*H*	*H*	*M*
CLO-5 :	*Investigate the results to obtain the optimized solution*	*5*	*90*	*85*	*H*	*H*			*H*	*M*							*H*	*H*	*M*
CLO-6 :	*Investigate with evolutionary algorithm, genetic algorithm, modern optimization techniques, search algorithms and optimization applications*	*1-5*	*90*	*85*	*H*	*H*	*H*	*H*	*H*	*M*		*M*	*M*	*M*	*M*		*H*	*H*	*M*

		Global optimization technique	Modern optimization techniques Part I	Modern optimization techniques Part Ii	Search Methods	Applications of optimization techniques
Duration (hour)		9	9	9	9	9
S-1	*SLO-1*	*Introduction to Optimization Algorithms*	*Introduction to Particle Swam Optimization (PSO)*	*Introduction to Simulated Annealing algorithm (SAA)*	*Linear search and binary search*	*Desirable and undesirable effects, functional requirements such as geometry and materials.*
S-2	*SLO-1*	*The Structure of Optimization - Formulae and Search Space/Operator Design*	*Theoretical derivatives in particle swarm optimization, Variants of PSO*	*Asymtotic convergence and typical behavior of SAA,Multi objective SA*	*Jump search,interpolation search*	*Stochastic optimization*
S-3	*SLO-1*	*Evolutionary algorithms, ranking selection, VEGA, Convergence prevention*	*Performance Enhancing techniques in PSO, Applications of PSO*	*External optimization, Tabu Search,Memetic and Hybrid algorithms*	*Exponential search, Fibonacci search*	*Integrating simulation in optimization models*
S-4	*SLO-1*	*Optimization problems in engineering, Inverse problems; Scheduling and Routing*	*Introduction to Ant colony optimization(ACO), Framework of ACO*	*Downhill simplex , Applications of SAA*	*Golden selection, Random, pattern and gradient search methods*	*Multi-Disciplinary Optimization in enhancing the features of an automobile.*
S-5	*SLO-1*	*Data Mining, Intelligent System designing, Introduction to Genetic Algorithm, Operators of GA"s, Differences and similarities between genetic algorithms and traditional techniques*	*Hill Climbing, Multi-Objective Hill Climbing*	*Introduction to Differential Evolution (DE)*	*State Space Search, Uninformed Search*	*Optimization for modular design.*
S-6	*SLO-1*	*Introduction to utilization of computer programs in GA, Schema Algorithm, Advanced operators and techniques in genetic search*	*Problems in Hill Climbing, Hill Climbing with Random Restarts*	*Structure of Differential algorithm (DA)*	*Breadth-First Search, Depth-First Search*	*Optimization of design parameters to design a mechanical component.*
S-7	*SLO-1*	*Genetic algorithm and machine learning, Introduction to multi objective*	*GRASP, Raindrop Method, Random Optimization*	*Computing environments in DE*	*Depth-limited Search, Iterative Deepening Depth*	*Optimization of process parameters in machining operations.*

		optimization, Types of multi objective problems and principles				
S-8	SLO-1	*Pareto optimality, Non-Elitist multi objective algorithms, Elitist multi objective algorithms*	*Monte Carlo methods*	*Applications of DA*	*Informed Search - Greedy Search- A* search - Adaptive Walks, Tree search,*	*Optimization in minimizing cost and enhancing strength mechanical elements*
S-9	SLO-1	*Constrained multi objective algorithm, Usage of multi objective optimization in various optimization techniques*	*Multi disciplinary optimization methods and their applications in engineering.*	*Optimization with parameter uncertainities – Robust Optimisation, formulation, algorithms, applications*	*Interpolation methods: quadratic and cubic, direct root method.*	*Optimization problems on scheduling.*

		Introduction	Types and principles ofmodeling	Methods of simulation	simulation of translational and Rotational systems	Simulation of hydraulic systems and manufacturing system
Duration (hour)		09	09	09	09	09
S-1	SLO-1	*Need for modeling and simulation in mechanical systems*	*Static modeling with examples*	*Monte Carlo simulation*	*Building of simulation models in mechanical systems*	*Simulation of hydraulic systems*
S-2	SLO-1	*Basics of modeling of physical systems*	*dynamic modeling with examples*	*Experimental nature of simulation*	*Simulation of translational systems*	*hydraulic systems with real time examples*
S-3	SLO-1	*methods of modeling*	*Stochastic models with examples*	*Numerical computation techniques*	*Case studies – Translatory motion for Serial Manipulator*	*Simulation of material handling systems in manufacturing*
S-4	SLO-1	*Review of basic probability and statistics*	*Principles of modeling*	*Analog system models*	*Simulation of rotational systems*	*Case studies –Automated guided vehicle (AGV) in Goods Transportation* *Simulation in flexible manufacturing*
S-5	SLO-1	*Random variables and their properties, estimation of means, variance and correlation*	*Study and evaluation of model*	*hybrid system models*	*real time examples*	*Case studies- vice casting product*
S-6	SLO-1					
S-7	SLO-1	*Concept of system and environment, continues and discrete systems*	*Continues system models*	*Continues system models*	*Transform Function Analysis. Developing a Linear Model*	*Simulation of waiting line system*
S-8	SLO-1	*Linear systems*	*Introduction to simulation, basic simulation, advantages of simulation*	*Role of computers in simulation*	*Case studies – Rotary Joint Link for SCARA ROBOT*	*waiting line system in manufacturing with examples*
S-9	SLO-1	*nonlinear systems*	*Role of simulation in model evaluation with examples*	*introduction to simulation software packages*	*Techniques for variance reduction*

Course Code	18MEE430T	Course Name	TQM AND RELIABILITY ENGINEERING	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the importance of TQM and its concepts, tools and techniques and apply in the real-world environment*
CLR-2 :	*Analyze the role of human involvement to improve the quality of product and service*
CLR-3 :	*Understand, apply and evaluate the tools and techniques used for product and service quality*
CLR-4 :	*Understand the basic concepts of reliability, apply and evaluate reliability for different systems*
CLR-5 :	*Understand and apply the concept of maintainability of a system to evaluate time for different cases*
CLR-6 :	*Understand the importance of quality and reliability in every process in the current scenario*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Recognize the importance of quality in every activity of an organization and in personal life*	*1,2*	*80*	*75*	*M*	*M*	*M*	-	*M*	-	-	*M*	*H*	*M*	-	-	-	-	*M*
CLO-2 :	*Apply the different tools and techniques to solve day to day issues and will seek an opportunity to practice*	*1,2,3*	*80*	*75*	*M*	*H*	-	-	*H*	-	-	-	*H*	*M*	-	*M*	-	-	*M*
CLO-3 :	*Think from the customer perspective and will plan for customer retention through total quality management*	*1,2,3*	*80*	*75*	*M*	*H*	*M*	-	*H*	*M*	-	*M*	*H*	*H*	-	-	-	-	*M*
CLO-4 :	*Develop and test a system for its reliability*	*1,2*	*80*	*75*	*M*	*M*	*M*	-	*M*	-	-	-	-	-	-	-	-	-	*M*
CLO-5 :	*Estimate MTTF, MTTR, MMT and MDT and plan for a maintenance strategy*	*1,2,3*	*80*	*75*	*M*	*H*	*M*	-	*H*	-	-	-	-	-	-	-	-	-	*M*
CLO-6 :	*Recognize the importance of quality in every activity of an organization and in personal life*	*1,2*	*80*	*75*	*M*	*M*	*M*	-	*M*	-	-	*M*	*H*	*M*	-	-	-	-	*M*

		Evolution, theories and implementation	Principles and 7 QC tools	Management Tools	Reliability	Maintainability
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Evolution of Total Quality Management*	*Customer Satisfaction – Types of customers, customer supplier chain*	*Affinity diagram – Relations diagram*	*Probabilistic nature of failures*	*Introduction Availability and Maintainability*
S-2	SLO-1	*Definition of quality, Dimensions of Quality*	*Customer perception of quality customer feed back*	*Tree diagram – Matrix diagram – Matrix data analysis diagram*	*Mean failure rate – Meantime between failures*	*Types of maintenance strategy*
S-3	SLO-1	*Deming's theory*	*Customer complaints – Customer retention – Service quality*	*Process decision program chart, Arrow diagram*	*Hazard rate – Hazard models*	*Mean time– to repair (MTTR)*
S-4	SLO-1	*Juran and Crosby theories*	*Employee involvement and motivation – Maslow's hierarchy of needs*	*5S Principles*	*Weibull model*	*Factors contributing to Mean Down Time (MDT)*
S-5	SLO-1	*Taguchi and Ishikawa theories*	*Herzberg theory – Empowerment and team work*	*Quality Function Deployment (QFD)*	*System reliability improvement*	*Fault diagnosis, and routine testing for unrevealed faults*
S-6	SLO-1	*Quality costs, Product quality Vs Service quality*	*Seven QC tools – Check sheets*	*Failure mode and effects analysis (FMEA)*	*Redundancy*	*Factors contributing to Mean Maintenance Time – (MMT) on condition maintenance*
S-7	SLO-1	*Goal setting*	*Histograms, control charts*	*Root cause analysis, poka-yoke*	*Series – Parallel and Mixed configurations*	*Total Productive Maintenance (TPM)*
S-8	SLO-1	*Strategic Quality planning*	*Pareto diagram, Cause and effect diagram*	*Introduction to Six Sigma*	*Problems in Series – Parallel and Mixed configurations*	*Periodic condition monitoring, Continuous condition monitoring*
S-9	SLO-1	*TQM implementation*	*Stratification, Scatter diagrams*	*DMAIC*	*Problems in Series – Parallel and Mixed configurations*	*Economics of maintenance*

Course Code	18MEE431T	Course Name	DESIGN OF JIGS, FIXTURE AND PRESS TOOLS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	DESIGN DATA BOOK		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Explore the various locating and clamping method*
CLR-2 :	*Understand the functions and design principles of Jigs*
CLR-3 :	*Understand the functions and design principles of Fixtures*
CLR-4 :	*Understand the functions and design principles of press work*
CLR-5 :	*Understand the functions and design principles of bending, forming and drawing*
CLR-6 :	*Be Familiar with design of jigs, Fixtures and Press Tools*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Able to design the locator and the clamp for the mechanical component*	1&2	80	85	H	M	H	-	-	-	-	-	-	-	-	-	M	-	-
CLO-2 :	*Acquire knowledge on different type of jigs and its application*	1	80	85	H	M	H	-	-	-	-	-	-	-	-	-	H	-	-
CLO-3 :	*Acquire knowledge on different type of fixture and its application*	1	80	85	H	M	H	-	-	-	-	-	-	-	-	-	H	-	-
CLO-4 :	*Understand the major design principle of press work and element of cutting die*	1&2	80	85	H	L	M		-	-	-	-	-	-	-	-	-	-	-
CLO-5 :	*Understand the functions and design principles of bending, forming and drawing*	1&2	80	85	H	-	M		-	-	-	-	-	-	-	-	-	-	-
CLO-6 :	*Understand the functions and design principles of locator and clamping of jigs and fixtures, use of press tools in bending, forming and drawing operations*	1&2	80	85	H	H	M	-	-	-	-	-	-	-	-	-	-	-	-

		Locating and Clamping Principles	Design of Jigs	Design of Fixtures	Press Working Terminologies and Element of Cutting Dies	Bending, Forming and Drawing Dies
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Objective of tool design, Function, features and advantages of jigs and fixture.*	*Types of jigs – Template and Plate Jigs*	*Introduction to fixture, type of fixtures*	*Press working terminology, types of presses*	*Types of Bending dies, press capacity*
S-2	SLO-1	*Locating Principle, Locating methods and devices,*	*Channel, Pot, Turnover, Box and Post Jig*	*Design Principles of milling fixture*	*Press accessories and press working operation.*	*Spring back, knockout, direct and indirect, pressure pads, ejectors*
S-3	SLO-1	*Pin and Button locator, Rest pads and plates, Diamond pin locator*	*Indexing Jigs*	*Lathe fixture*	*Shearing action, clearances, press work materials.*	*Variables affecting metal flow in drawing operation*
S-4	SLO-1	*Clamping Principles, types of clamps, mechanical actuation clamps*	*Drill Bushes and Jig Buttons*	*Design Principles of boring fixture, and Broaching Fixture*	*Center of pressure, design of various elements of dies*	*Draw die insert, draw beads, ironing*
S-5	SLO-1	*Pneumatic actuation clamping*	*method of construction of drill jigs*	*Design Principles of Grinding Fixture*	*Accessories of blanking dies – punch, punch holder, die set, stripper, pilots*	*Design and development of bending and forming*
S-6	SLO-1	*Hydraulic actuation clamping*	*General consideration in the design of Drill jigs*	*Assembly, Inspection and welding fixtures*		*Drawing reverse re-drawing and combination die*
S-7	SLO-1	*Vacuum and magnetic clamping*	*Drill jigs and modern manufacturing*	*Modular fixturing system,*	*Selection of standard parts*	*Blank development for axisymmetric, rectangular and elliptic parts, single and double action dies*
S-8	SLO-1	*Standard parts in jigs and fixtures*	*Design and development of jigs and for given component 1*	*Design and development of fixtures and for given component 1*	*Design and preparation of four standard views of simple blanking and piercing die*	*Bulging, swaging, Embossing, coining, curling*
S-9	SLO-1	*Limits, fits, Tolerances and types of tolerances*			*Shaving, notching, compound and progressive dies*	*Hole flanging, shaving, and sizing, assembly, fine blanking dies*

CLO-3 :	*Understand the working of refrigeration systems.*	1,2	90	80	H						H							H	
CLO-4 :	*Analyze and design ofair conditioning systems.*	1,2,3	90	80	H	H	H	M			M							H	
CLO-5 :	*Appreciate the need and applications of air conditioning systems.*	1&2	90	80	H					L								H	
CLO-6 :	*Understand and analyze the refrigeration and air conditioning system s*	1&2	90	80	H	M		M			H							H	

		Vapour Compression Refrigeration Systems	Absorption Refrigeration Systems	Refrigeration Equipment's & Contro	Design of Air Conditioning Systems	Applications of Refrigeration And Air Conditioning Systems
Duration (hour)		9	9	9	9	9
S-1	SLO1	*Review of thermodynamic principles of refrigeration*	*Ideal vapour absorption refrigeration system*	*Construction features of reciprocating compressors, Rotary and screw compressors*	*Different heat sources-sensible heat load, Latent heat load*	*Preservation of different products*
S-2	SLO1	*Simple vapour compression refrigeration system*	*Absorbent refrigerant combination - Properties of refrigerant absorbent pair*	*Type of Condenser, heat transfer in condensers*	*Heating and Cooling Load - Occupants load, equipment load, fresh air load, infiltration air load*	*Construction and working of Ice factory*
S-3	SLO1	*Problem on COP of VCR system*	*Vapour absorption refrigeration system based on Water-lithium bromide.*	*Types of cooling towers- Construction features of Natural, Mechanical draft.*	*Design of air conditioning system-cooling load and air quantities*	*The heating and cooling requirements for different dairy products and processes in Dairy plant*
S-4	SLO1	*Methods to improve the COP of VCR system*	*Problems based on Water - lithium bromide systems*	*Type of Evaporators-working of dry expansion and flooded evaporator.*	*Bypass factor(BPF) of heating and cooling coil, Effective sensible heat factor(ESHF)*	*Application of non-conventional refrigeration method in vortex and pulse tube refrigeration. system*
S-5	SLO1	*Multiple evaporator and compressor system*	*Vapour absorption refrigeration system based on Aqua Ammonia*	*Working of automatic (or) constant pressure expansion valve and thermostatic expansion valve*	*Room sensible heat factor(RSHF).Grand sensible heat factor*	*Application of non-conventional refrigeration method in Solar Refrigeration system*
S-6	SLO1	*Cascade system*	*Problems based on Aqua -Ammonia Systems*	*Properties of refrigerants*	*Factors affecting Human comfort*	*Application of air conditioning in hotels and restaurants*
S-7	SLO1	*COP comparison with sub cooling and super heating*	*Single effect absorption refrigeration system*	*Selection of refrigerants-alternate refrigerants*	*Problems on –RSHF, and GSHF*	*Application of air conditioning in theatres*
S-8	SLO1	*Problems based on sub cooling*	*Comparison of vapour compression refrigeration system versus vapour absorption refrigeration system*	*thermostatic control-operating and safety controls*	*Problems on design of air conditioning system*	*Application of air conditioning in auditorium and hospitals*
S-9	SLO1	*Problems based on super heating*	*Advantage and disadvantage of vapour absorption system*	*Refrigerant charging procedure, methods for measuring a Refrigerant Charge*	*Cooling coils and dehumidifier, air washers*	*Cryogenics-low temperature applications*

Course Code	18MEE342T	Course Name	INTERNAL COMBUSTION ENGINES	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC101T,18MEC102T	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*familiarizewith the I.C.enginebasics, analyze the ideal cycles and performance characteristics*
CLR-2 :	*Study about carburetors, fuel injection systems, ignition, lubrication and cooling systems.*
CLR-3 :	*Understand the combustion in S.I. engines, combustion chambers and knocking phenomena*
CLR-4 :	*Understand the combustion in C.I. engine, diesel combustion chambers and abnormal combustion;*
CLR-5 :	*Study about the emissions from the I.C. engines, alternative fuels and new combustion concepts*
CLR-6 :	*Understand the design principles of I.C. engines*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1	2	3	Program Learning Outcomes (PLO) 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Performance calculations of I.C. engines, Interpret the ideal and fuel-air cycles; performance maps*	1,2&3	90	80	H	H	H	H	L	L	M						M	H	M
CLO-2 :	*Evaluate the functioning of various auxiliary systems*	1&2	90	80	H	H	H	M	M	L	M						M	H	M
CLO-3 :	*Analyze SI engine combustion, knocking and the design principles of combustion chamber.*	1&2	90	80	H	H	M	H	M	L	M						M	H	M
CLO-4 :	*Analyze CI engine combustion, design principles of combustion chamber and abnormal combustion*	1&2	90	80	H	H	M	H	M	L	M						M	H	M
CLO-5 :	*Recognize the need for reducing the emission from I.C. engines, and alternate fuels*	1&2	90	80	H	M	M	H	H	M	H						M	H	M
CLO-6 :	*Evaluate the performance, combustion and emissions of I.C. engines from thermodynamic principles*	1,2&3	90	80	H	H	M	M	M	M	H						M	H	M

		Performance of I.C. Engines	Engine Auxiliary systems	Combustion in S.I. Engines	Combustion in C.I. Engines	Emissions and Alternative fuels
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Engine operating cycle, terminology and components, four stroke and two stroke engines and their comparison*	*Carburation, mixture requirements at different loads and speeds, simple carburetor*	*Combustion in spark ignition engines, Stages of combustion in SI engine, flame front propagation*	*Combustion in Compression Ignition engines, Stages of combustion in CI engines,*	*Air pollution due to IC engines, Emissions standards, hydrocarbon and CO emissions,*
S-2	SLO-1	*Operation of SI and CI engines, their p-v diagrams and comparison, classifications and applications IC engines,*	*Problems on simple carburetor*	*Analysis of cylinder pressure data*	*Analysis of cylinder pressure data and heat-release analysis*	*Oxides of nitrogen and soot, aldehydes, sulphur, lead and phosphorus emissions*
S-3	SLO-1	*Volumetric efficiency, and its variation with respect to engine speed, supercharging and turbocharging of engines*	*Functional requirements and classification of an injection systems, injection pump*	*Factors influencing the flame speed,*	*Factors affecting the delay period*	*Exhaust gas recirculation and catalytic converter*
S-4	SLO-1	*First law applied to engine, thermal, mechanical efficiencies, pumping work, mean effective pressure*	*Nozzle types, EFI systems: MPFI, PFI, GDI*	*Rate of pressure riseAbnormal combustion, knocking in SI engines,*	*Basics of fuel sprays: Fuel flow rate through injector nozzle, Overall spray structure*	*Basics of selective catalyst reduction, diesel particulate filter*
S-5	SLO-1	*Engine parameter measurements.*	*Functional requirements of ignition systems, Battery ignition system*	*Effect of engine variables on engine knock*	*Atomization and spray penetration*	*Flame ionization detector, non-dispersive infrared detector*
S-6	SLO-1	*Problems on engine performance.*	*magneto ignition system, Ignition timing and engine parameters*	*Combustion chambers for SI engines*	*Phenomenon of knock in CI engines, comparison of knock in CI and SI engine*	*Chemiluminescence analyzer, smoke types, Bosch smoke meter*
S-7	SLO-1	*Concept of heat balance and problems*	*Functional requirements of lubrication system, properties of lubricants, mist lubrication system*	*Smooth engine operation, High power output and thermal efficiency*	*Combustion chambers for CI engine: Direct injection engines*	*Fuels for IC engines: Liquid fuels: Alcohol, methanol, ethanol, vegetable oil*
S-8	SLO-1	*Review of ideal cycles and fuel-air cycles significance*	*Wet and dry sump lubrication system*	*Concept of hybrid electric drive trains*	*Gasoline Direct Injection (GDI) Engines: Direct injection Vs port injection, classification of GDI eninges*	*Bio diesel advantages and disadvantages; Gaseous fuels: CNG, LPG, Hydrogen*
S-9	SLO-1	*Engine performance characteristics*	*Liquid and air cooling systems, properties of the coolant and antifreeze solutions*	*Architectures of hybrid electric drive trains*	*Spray, wall and air guided combustion systems for GDI engines*	*Advanced concepts: Stratified charge and HCCI engines*

Learning Resources	1. *Ganesan. Course Code	18MEE343T	Course Name	ELEMENTS OF SPACE TECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Develop a basic knowledge on earth's atmosphere.*
CLR-2 :	*Learn the different orbit bodies. & Understand the aspects of satellite injection.*
CLR-3 :	*Know the interplanetary and missile trajectories and materials for Spacecraft.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Develop a basic knowledge on earth's atmosphere.*	*1&2*	*100*	*95*	*H*														
CLO-2 :	*Learn the different orbit bodies. & Understand the aspects of satellite injection.*	*1*	*100*	*95*	*H*	*H*		*H*											
CLO-3 :	*Know the interplanetary and missile trajectories and materials for Spacecraft.*	*1*	*100*	*95*	*H*			*H*											

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*The solar system*	*The Many body problem – Lagrange, Jacobi identity*	*General aspects of satellite injections The*	*Two-dimensional interplanetary trajectories*	*Introduction to Hypersonic Aerodynamics, thin shock layers, Entropy layer, Viscous interaction, High temperature flow, Low density flow.*
S-2	SLO-1	*Reference frames and coordinate systems*	*The circular restricted three body problem*	*Launch Phase, The Orbit Injection Phase*	*Fast interplanetary trajectories*	*High temperature gas dynamics- Importance of high temperature flows.*
S-3	SLO-1	*Motion in Acceleration Reference Frames*	*Libration points*	*Satellite orbit transfer - Various cases*	*Three dimensional interplanetary trajectories Launch of interplanetary spacecraft*	*Atmospheric entry of blunt nosed body.*
S-4	SLO-1	*The celestial sphere*	*Relative Motion in the N-body problem*	*Orbit deviations due to injection errors*	*Trajectory Characteristics*	*Spacecraft acoustics and shock loads*
S-5	SLO-1	*The ecliptic, Motion of vernal equinox*	*The two body problem*	*Special and general perturbations - Cowell's Method ,*	*Trajectory about the target plant.6*	*Thermal environment and Thermal Balance*
S-6	SLO-1	*Precession and Equatorial Coordinates*	*Satellite orbits ,Relations between position and time*	*Encke's method*	*The boost phase, The ballistic phase*	*Thermal analysis and Thermal design*
S-7	SLO-1	*Sidereal time, Solar time, Standard time*	*Orbital elements.*	*Cowell's Method ,*	*Trajectory geometry - Optimal flights*	*Thermal active & passive control and thermal control coatings.*
S-8	SLO-1	*The earth's atmosphere.*	*Parameters used to describe the orientation in space*	*Method of variations of orbital elements*	*Time of flight, Reentry phase*	*Requirements and material selection*
S-9	SLO-1	*Troposphere, Stratosphere, Mesosphere, Thermosphere,& Exosphere*	*Examples of orbits*	*General perturbations approach.*	*The position of the impact point , Influence coefficients*	*Spacecraft materials and composite materials.*

		Energy And Environment	Energy Conservation	Energy Savings In Thermal Systems	Energy Management	Energy Economics
Duration (hour)		09	09	09	09	09
S-1	SLO-1	*Introduction to Energy and Environment*	*Introduction to energy conservation*	*Fuels and its consumption*	*Energy management principles.*	*Introduction to engineering economics*
S-2	SLO-1	*Represent World energy consumption*	*Energy conservation schemes*	*Energy savings in Boiler.*	*Energy resource management.*	*Costing techniques in energy engineering*
S-3	SLO-1	*Effect of Greenhouse gases*	*Industrial energy conservation methods*	*Firing methodology in boilers*	*Energy management levels.*	*Cost factors*
	SLO-2	*Global warming*				*Break even analysis*
S-4	SLO-1	*Renewable energy sources*	*Energy surveying for industries.*	*Waste heat recovery systems*	*Energy management information systems.*	*Cost optimization for energy engineering techniques*
	SLO-2		*Energy auditing for industries.*			*Optimal target investment schedule*
S-5	SLO-1	*Environment aspects utilization*	*Energy index and cost*	*Energy saving system in HVAC*	*Energy instrumentation.*	*Financial appraisal and profitability*
S-6	SLO-1	*Energy prices*	*Energy conservation in engineering and process industry*	*Energy savings in Refrigeration systems*	*Energy measurement in energy management*	*Investment decisions*
S-7	SLO-1	*World energy reserves*	*Simple case study of energy auditing in process industries*	*Energy Storage systems*	*Energy management Techniques.*	*Method of investment appraisal*
	SLO-2					*Discounted cash flow*
S-8	SLO-1	*World energy polices*	*Energy conservation in Buildings*	*Energy saving methodologies by using Insulated pipe work systems*	*Computerized energy management*	*Summary investment appraisal techniques*
	SLO-2					*Optimization with one variable*
S-9	SLO-1	*The energy future and the role of renewable energy*	*Concept of Green building*	*Heat exchangers*	*Importance of energy management*	*Optimization with multiple variable.*

		Basic flow concepts in turbomachines	Centrifugal flow machines	Axial flow machines	Axial flow turbines	Hydraulic turbines
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Definition, classification and stages of turbo machines*	*Fans - different impeller sizes, shapes, blade angles, speed and construction*	*Aero-Thermodynamics of flow through an Axial flow Compressor stage.Blade profile, lift and drag coefficients*	*Introduction:Turbinestage:Turbine blade 2-D (cascade)analysis Work done.*	*Pelton turbine- impulse wheel, single jet and multiple jet units*
S-2	SLO-1	*Estimation of specific work for incompressible and compressible flow machines*	*Blade shape, blade number,designcalculations*	*Compressors - brief introduction to two-dimensional cascade and its application to design*	*Degree of reaction;Losses and Efficiency.*	*Velocity triangles at inlet and exit of buckets*
S-3	SLO-1	*Internal and external losses, various efficiencies*	*Performance in series and parallel*	*Flow deflection and stagnation pressure loss across blade rows*	*Flowpassage:Subsonic,transonic and supersonic turbines,Multi-staging of Turbine.*	*Performance calculations considering losses in the nozzle and buckets*
S-4	SLO-1	*Representation of specific work on T-s and h-s diagrams*	*Compressor - slip, inducers, designs without inducer but with inlet guide vanes (IGV)*			*Francis turbine - reaction, impeller shapes for different shape Numbers/heads*
S-5	SLO-1	*Velocity triangles - centrifugal and axial flow machine impellers*	*problems with inducer and IGV's - blade angles,temperature rise and static pressure rise across the impeller*	*Expression for pressure rise coefficient in terms of flow angles and loss coefficient*	*Exit flow conditions:Turbine cooling*	*Calculations on impeller dimensions, blade angles and performance using velocity triangles, draft tubes*
S-6	SLO-1	*Euler's energy equation across the impeller as applicable to all machines,*			*Turbine blade design*	*Kaplan / Propeller Turbine - reaction, impeller (adjustable and fixed) blades and guide blades*
S-7	SLO-1	*Slip and its estimation*	*Vaned and vaneless diffuser and volute casing.Surging; Chocking; Rotating stall*	*Design of impeller blades for free vortex and forced vortex*	*Turbine profiles, Testing of turbine - test rigs - standard instrumentation- operational characteristics*	
S-8	SLO-1	*Degree of reaction*	*Pump - system head, priming of pumps, net positive suction head, minimum starting speed and cavitations.Testing of pumps - test rigs – standard instrumentation- operational characteristics*	*Design and performance calculations. Stall and surgephenomenon. Noise problem in Axial Compressorsand Fans.*	*Airfoil data and Profile construction.*	*Calculation of performance using velocity triangles / blade angles at different radii for free vortex flow, its suitability for low heads*
S-9	SLO-1	*Blade angles and their effects, calculations considering slip.*

Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Know the functions of various auxiliary combustion equipment's.*
CLR-2 :	*Understand the various Thermal power systems.*
CLR-3 :	*Analyze the performance of boiler and condenser. Familiarize with operation of cooling towers.*
CLR-4 :	*Familiarize with operation of Nuclear, Diesel and Gas turbine power plants.*
CLR-5 :	*Know the power plant economics.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Familiarize with the combustion equipment of Thermal power plants.*	12	90	80	H														
CLO-2 :	*Familiarize with the Boilers, accessories and mountings in thermal power system.*	12	90	80	H	H		M											
CLO-3 :	*Familiarize with the working principle of cooling tower and condensers*	12	90	80	H	H													
CLO-4 :	*Familiarize with the working principle of Nuclear power plant and Diesel power plant.*	12	90	80	H						M								
CLO-5 :	*Familiarize with economics in power plant*	12	90	80	H										L				

		Fuel Combustion	Thermal Power	Performance Of Thermal Power System	Nuclear, Diesel And Gas Turbine Power Plants	Power Plant Economics
Duration (hour)		09	09	09	09	09
S-1	SLO-1	*equipmentIntroduction to power plant-Layout of Thermal power plant*	*systemsclassification of steam generators.*	*Selectionof Boilers*	*Fuels for Nuclear power plants*	*Power load factor*
	SLO-2	*Combustion equipment's and its types.*			*Moderator for Nuclear power plants*	*Utilization factor*
S-2	SLO-1	*Solid fuel firing method*	*Working principle of high pressure boilers*	*Boiler capacity rating*	*Control rods for Nuclear power plants*	*Power plant cost economics*
	SLO-2				*Coolants for Nuclear power plant.*	
S-3	SLO-1	*Classification and working of stokers*	*Working principle of high pressure boilers*	*Boiler testing and performance*	*Types of Nuclear reactor*	*Tariff rates for electricity*
	SLO-2			*Boiler Energy Balance*		
S-4	SLO-1	*Fuel and ash handling system*	*Working principle of supercritical boilers*	*Condenser design factors*	*Boiling water reactor*	*Demand changes for electricity*
	SLO-2				*Pressurized water reactor.*	*Load distribution*
S-5	SLO-1	*Working principle of draft system its type*	*Working of fluidized bed boilers.*	*Air removal rate and performance of condenser*	*Radiation hazards*	*Effect of Variable load on plant design*
	SLO-2				*Radioactive waste disposal.*	*Energy conservation in power plant*
S-6	SLO-1	*Heat recovery equipmments: Economiser, preheaters and reheaters*	*Boiler mountings*	*Cooling towers range and*	*Classification of Diesel power plant*	*Energy audit in power plant*
	SLO-2					
S-7	SLO-1	*Types of superheaters*	*Boiler accessories*	*Cooling towers approach*	*Components of Diesel power plant*	*Maintenance aspects of power plant*
	SLO-2	*Types of desuperheaters.*	*Feed water Treatment*		*Selection of Engine type.*	
S-8	SLO-1	*Emission control methods-Flue gas cleaning*	*Working of Condensers*	*Cooling towers load and performance*	*Closed cycle Gas Turbine plant*	*Maintenance aspects of power plant*
	SLO-2		*Types of Condensers. Factors affecting condenser. Theory and Design of Condenser*		*Open cycle gas turbine plant.*	
S-9	SLO-1	*Particulate and gaseous emission control methods.*	*Working of cooling towers.*	*Selections of condenser and cooling towers.*	*Combined power cycles.*	*Natural and global energy scenario.*
	SLO-2		*Types of cooling towers.Factors affecting cooling Tower*

							3	0	0	3

Pre-requisite Courses	18MEC101T-Thermodynamics	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*be familiar with basics of solar radiation*
CLR-2 :	*understand the working of solar collectors*
CLR-3 :	*be familiar with the solar thermal energy systems and their applications*
CLR-4 :	*understand the solar thermal energy storage and solar cooling systems*
CLR-5 :	*be familiar with the solar photovoltaic energy conversion systems*
CLR-6 :	*be familiar with the solar energy conversion systems*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*understand the fundamentals of solar radiation*	1,2	90	80	H			M			M							H	
CLO-2 :	*understand the basic principles of solar collector systems*	1,2	90	80	H		H											H	
CLO-3 :	*analyze and design solar thermal energy systems*	1,2,3	90	80	H	M	H			L	H							H	
CLO-4 :	*acquire knowledge on solar thermal energy storage and solar cooling systems*	1,2	90	80	H	H		M			H							H	
CLO-5 :	*acquire knowledge and analyze solar photovoltaic energy conversion systems*	1,2,3	90	80	H			M		M	H							H	
CLO-6 :	*acquire knowledge on solar energy conversion systems*	1,2,3	90	80	H			H		L	M							H	

		Solar Radiation	Solar Thermal Collectors	Design of Solar Thermal Systems	Solar Thermal Energy Storage and Solar Cooling	Solar Photovoltaic Energy Conversion
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*The sun and the earth, electromagnetic spectrum*	*Cassification of solar collectors and solar flat plate collectors*	*Design of solar flat plate collector systems*	*Need for solar thermal energy storage*	*Photovoltaic effect , advantages and disadvantages of solarphotovoltaic technology and classification,*
S-2	SLO-1	*Laws of thermal radiation*	*Solar evacuated tube collectors*		*Sensibleand latent heat storage, its advantages and disadvantages*	*Semiconductors, p-n junction, photo generation of charge carriers*
S-3	SLO-1	*Solar radiation:beam and diffuse radiations, terrestrial radiation*	*Advantages and disadvantages of concentrators over flat plate collectors*	*Problems on solar flat plate collector systems*	*Stratified thermal energy storage*	*I-V characteristics of solar cell*
S-4	SLO-1	*Sun and earth geometry*	*Solar concentrators and receiver geometries, concentrationratio*	*Design of solar active systems using f-chart method*	*PCM based solar thermal energy storage*	*Losses in solar cells and solar module*
S-5	SLO-1	*Solar angles*	*Compound parabolic concentrators, fresnel lens collectors*	*Design of solar cooker*	*Selection of latent heat storage materials*	*Maximum power point tracking in solar photovoltaic system*
S-6	SLO-1	*Sunrise, sunset and day length*	*Solar parabolic concentrators: trough systems*	*Solar air heater and solar dryer*	*Solar cooling systems and its advantages*	*Photovoltaic modules in series and parallel*
S-7	SLO-1	*Solar radiation on tilted surfaces*	*Solar parabolic concentrators: dish systems*	*Solar desalination: types, and operation*	*Vapour compression refrigeration systems and its solar operation*	*Concentrated photovoltaic cells*
S-8	SLO-1	*Measurement of solar radiation: pyranometer*	*Solar central receiver system*	*Solar pond: types, principles and applications*	*Vapour absorption cooling systems*	*Temperature dependencies and multi junction solar cells*
S-9	SLO-1	*Measurementof solar radiation: pyrheliometer, sunshinerecorder*	*Solar collector orientation and sun tracking systems*	*Solar thermal power plants and solar furnace*	*Solar thermoelectric cooling systems*	*Grid connected and standalone photovoltaic system*

Course Code	18MEE348T	Course Name	GAS TURBINE TECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards		Approved Gas Tables are permitted	

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Familiarize the functions of components of gas turbine.*
CLR-2 :	*Analyze the power cycles for optimum thermal performance.*
CLR-3 :	*Understand axial flow compressor characteristics.*
CLR-4 :	*Understand combustion systems and axial flow turbine operation*
CLR-5 :	*Familiar with the performance predictions.*
CLR-6:	Familiar with gas turbine technologies and their performances

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Appreciate the functions of components of gas turbine.*	1& 2	90	80	H	-	-	-	-	-	-	-	-	-	-	-	-	-	-
CLO-2 :	*Appreciate the analysis knowledge of the power cycles for optimum thermal performance.*	1,2,3	90	80	H	H	H	-	-	-	-	-	-	-	-	-	-	-	-
CLO-3 :	*Appreciate the understanding of the axial flow compressor characteristics.*	1,2, 3	90	80	H	H	H	-	-	-	-	-	-	-	-	-	-	-	-
CLO-4 :	*Appreciate the understanding of the combustion systems and axial flow turbine operation*	1,2,3	90	80	H	H	H	-	-	-	-	-	-	-	-	-	-	-	-
CLO-5 :	*Appreciate the familiarity with the performance predictions of gas turbines.*	1,2,3	90	80	H	H	H	L	L	-	-	-	-	-	-	-	-	-	-
CLO-6 :	*Appreciate the familiarity with gas turbine technologies and their performances*	1,2,3	90	80	H	H	H	L	L	-	-	-	-	-	-	-	-	-	-

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Definition, classification of gas turbines*	*Ideal cycle operation and thermal performance*	*Centrifugal compressor, Principle of operation, work done. Pressure rise and the diffuser*	*Operation requirements*	*Prediction performance of gas turbines component characteristics*
S-2	SLO-1	*Open cycle single shaft and twin shaft multi speed arrangement, Closed cycle, aircraft propulsion*	*Methods of determining component losses*	*Compressibility effects, Non dimensional quantities*	*type of combustion – Factors affecting combustion process, Combustion chamber performance*	*Off design operation and its relative performance*
S-3	SLO-1	*Gas turbine components and their description*	*Design point performance calculations, Comparative performance of actual and practical cycles.*	*Computerized design procedure. Axial flow compressor basic operation*	*Different types of combustion chambers and their relative merits and demerits*	*Equilibrium running of gas generator*
S-4	SLO-1	*Representation of specific work on T-s and h-s diagrams*	*Analysis of polytropic efficiency (Infinitesimal stage efficiency) of a gas turbine and Velocity triangles*		*Turbine construction – Performance, Impeller blade fixing*	*Off design operation of free turbine – Methods of displacing of the equilibrium running line*
S-5	SLO-1	*Comparison of steam and gas turbines*	*Closed cycle gas turbine and Combined cycle and Cogeneration schemes, Integrated gasification combined cycle.*	*Elementary theory, Factors effecting stage pressure ratio, Blockage in compressor annulus*	*Cooling of turbine blades – Blade vibration*	*Incorporation of variable pressure losses*
S-6	SLO-1	*Applications of gas turbine in various fields.Industrial applications of gas turbines.*			*Protective coating – Gas turbine turbo chargers - Power expanders*	*Matching procedure for two spool engines – Principle of control systems.*
S-7	SLO-1	*Gas Turbine in Co- Generation - Heat recovery and steam generation scheme.*	*Reheat, intercooling and Regenerator cycles for improved thermal performance.*	*Degree of reaction, Blade fixing details, Sealing materials, Material selection for compressor blades, Stage performance*		
S-8	SLO-1	*Gas turbine fuels and their properties*	*Optimum pressure ratio for maximum thermal efficiency, work ratio, air rate, effect of operating variables on thermal efficiency, work ratio, and air rate*	*Design and off design performance characteristics.*	*Vortex theory – Estimation of stage performance.*	*Factors influence the gas turbine performance and the improvement methods.*
S-9	SLO-1	*Environmental issues related to the operation and maintenance, Future of gas turbine engines and the new possibilities*

							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with basics of solar radiation data and its measurement*
CLR-2 :	*Be familiar with construction and operation of solar thermal energy systems*
CLR-3 :	*Understand the operation of solar thermal power plants*
CLR-4 :	*Be familiar with basics and design of solar photovoltaic systems*
CLR-5 :	*Be exposed to the concept solar architecture in buildings and green buildings*
CLR-6 :	*Be familiar with solar energy concepts and various applications of solar energy like thermal systems, photovoltaic systems and building architecture*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Understand solar radiation, solar angles and recognize and analyze the working of solar radiation measuring instruments*	*1&2*	*85*	*75*	*H*	*M*					*H*							*H*	
CLO-2 :	*Understand the components and working of low temperature solar thermal systems*	*1*	*85*	*75*	*M*					*M*	*H*						*M*	*H*	
CLO-3 :	*Acquire knowledge on basic components and working of concentrated solar thermal systems for power generation*	*1*	*85*	*75*	*M*					*M*	*H*						*M*	*H*	
CLO-4 :	*Comprehend the solar cell working and manufacturing and can design a solar system for buildings*	*1&2*	*85*	*75*	*M*	*M*				*M*	*H*						*M*	*H*	
CLO-5 :	*Recognize the various solar architecture in buildings and gain a basic knowledge in green buildings*	*1*	*85*	*75*	*M*					*L*	*H*						*M*	*H*	
CLO-6 :	*Understand solar radiation and its seasonal variations along with understanding of the practical application of solar energy powered systems in the three main domains of thermal, photovoltaic and building architecture*	*1*	*85*	*75*	*M*						*H*						*M*	*H*	

		Solar Radiation and its measurement	Low Temperature Systems	High Temperature systems	Photovoltaics	Solar Systems for Buildings
Duration (hour)		18	18	18	18	18
S-1	SLO-1	*The Sun and the Earth, Electromagnetic spectrum*	*Solar flat plate collectors*	*Solar concentrators and receiver geometries, Concentration ratio*	*Photovoltaic effect, Classification, Advantages and disadvantages of Solar photovoltaic technology*	*Need for passive architecture, Thermal comfort*
S-2	SLO-1	*Laws of radiation*	*Basic design of solar flat plate collectors, example problems*	*Advantages and disadvantages of concentrated collectors over non-concentrated collectors*	*Semiconductors, p-n junction, Photo generation of charge carriers*	*Sun's motion, Orientation and design of buildings*
	SLO-2	*Solar radiation: beam and diffuse radiations, Terrestrial radiation*				
S-3	SLO-1	*Depletion of Solar radiation in atmosphere*	*Solar evacuated tube collectors*	*Rankine power cycle*	*Photovoltaic cell manufacture: Czochralski, Zone refining and ribbon growth*	*Thermal capacity, Sensible and latent heat storage in buildings, Insulation*
S-4	SLO-1	*Solar angles, example problems*	*Domestic hot water systems: Integral collector storage, Thermosiphon system, Drain back system, Drain down system, Anti-freeze system*	*Compound parabolic concentrators, Fresnel lens collectors*	*I-V characteristics of solar cell*	*Solar Passive architecture : Heating of Buildings*
S-5	SLO-1		*Solar Cooker : Box type and Dish type*	*Solar parabolic concentrators: trough system*	*Losses in solar cell*	*Solar Passive architecture : Cooling of Buildings*
S-6	SLO-1	*Sunrise, sunset and day length, example problems*	*Solar Cooking application problems*	*Solar parabolic concentrators: dish system*	*Solar Module manufacturing*	*Air conditioning : Solar vapour compression refrigeration system*
S-7	SLO-1	*Solar radiation on tilted surfaces*	*Solar air heater, Solar dryer and its types*	*Central receiver plant / Power tower*	*Photovoltaic system for power generation : Standalone system and grid connected system*	*Air conditioning : Solar vapour absorption refrigeration system*
S-8	SLO-1	*Measurement of solar radiation: Pyranometer*	*Solar desalination, solar still design, example problems*	*Solar furnaces: types, principle and application*	*Photovoltaic system design for a building: DC system and AC system, example problems*	*Green buildings, Zero energy buildings, Rating systems*
S-9	SLO-1	Measurement of solar radiation: Pyrheliometer, Sunshine Recorder	Solar Pond: types, principle and application	Orientation and sun tracking systems

Course Code	18MEE350T	Course Name	GAS DYNAMICS AND SPACE PROPULSION	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC201T, 18MEC202T	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Gas Tables		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Familiarize the compressible fluid flow concepts*
CLR-2 :	*Understand the isentropic flow through variable area ducts and normal shocks.*
CLR-3 :	*Familiarize with the oblique shock and expansion waves*
CLR-4 :	*Understand the flow through constant area duct with friction and heat transfer*
CLR-5 :	*Understand the aircraft and rocket propulsion*
CLR-6 :	*Familiarize with the gas dynamics and space propulsion*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Analyse and evaluate the compressible flow problems*	*123*	*90*	*80*	*H*	*H*		*M*											
CLO-2 :	*Analyse and solve the engineering flow problems through the nozzles and diffusers with and without Normal shock.*	*123*	*90*	*80*	*H*	*H*		*M*											
CLO-3 :	*Analyse and solve problems related to oblique shock and expansion waves.*	*123*	*90*	*80*	*H*	*H*		*M*											
CLO-4 :	*Analyse and solve problems related to flow through constant area ducts with friction and heat transfer..*	*123*	*90*	*80*	*H*	*H*		*M*											
CLO-5 :	*Analyse and evaluate the performance of Aircraft and Rocket Engines.*	*123*	*90*	*80*	*H*	*H*		*M*											
CLO-6 :	*Understand the gas dynamics and space propulsion.*	*123*	*90*	*80*	*H*	*H*		*M*											

		Fundamentals of Compressible Flow	Isentropic Flow Through Variable Area Ducts	Oblique Shock And Expansion	Flow Through Constant Area Ducts	Aircraft and Rocket Propulsion
Duration (hour)		9	9	9	9	9
S-1	SLO-1 SLO-2	*Energy equation for compressible fluid flow*	*T-s and h-s diagrams for nozzles and diffusers*	*Introduction and oblique shock relations*	*Flow in constant area ducts with friction (Fanno flow), Fanno curves*	*Types of aircraft engines and Propulsion theory*
S-2	SLO-1 SLO-2	*Stagnation state and Mach number*	*Area ratio as a function of Mach number, Impulse function*	*Relation between wave angle and deflection angle*	*Fanno flow equations,*	*Performance of Turbojet, Turbofan ,Turboprop engines*
S-3	SLO-1 SLO-2	*Various regimes of flow*	*Mass flow rate through nozzles and diffusers*	*Supersonic flow over a wedge and weak oblique Shock*	*Variation of flow properties (no derivation)*	*Ramjet and pulse jet engine – construction and working.*
S-4	SLO-1 SLO-2	*Reference velocities , Critical states*	*Problems on variable area duct*	*Problems on the oblique shock wave*	*Variation of Mach number with duct length*	*Problems on Aircraft Engine Performance*
S-5	SLO-1 SLO-2	*Problems on energy equations*	*Flow with normal shock – Development, governing equations*	*Supersonic compression and expansion, Prandtl-Meyer expansion*	*Flow in constant area duct with heat transfer - Rayleigh line & curves*	*Types and applications of rocket engines*
S-6	SLO-1 SLO-2	*Equivalent of Bernoulli's equation for compressible flow*	*Derivation of Prandtl – Meyer equation*	*Problems on Prandtl-Meyer expansion and compression*	*Rayleigh flow equations*	*Solid ,Liquid and Hybrid propellant rockets – construction and fuels-oxidizers*
S-7	SLO-1 SLO-2	*Effect of Mach number on compressibility*	*Variation of flow parameters -static pressure & temperature, density, stagnation pressure and entropy across the shock (no derivations)*	*Detached shock waves, reflection and intersection of shocks and expansion waves*	*Variation of flow properties (no derivate ion)*	*Performance of Rocket engines.*
S-8	SLO-1 SLO-2	*Velocity of sound and wave propagation-subsonic, sonic and supersonic waves*	*Impossibility of shock in subsonic flows, strength of a shock wave*	*Problems on intersection of shocks and expansion waves*	*Maximum heat transfer concept*	*Problems on Rocket engines*
S-9	SLO-1 SLO-2	*Problems on energy equations*	*Problems on Normal shock*	*Underexpanded and overexpanded nozzles*	*Tables and charts for Fanno flow and Rayleigh flow.*	*Types and applications of rocket engines*

Course Code	18MEE441T	Course Name	COMPUTATIONAL FLUID DYNAMICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC101T,18MEC105T	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Be familiar with the basic governing equations of fluid mechanics and behavior of PDE.*
CLR-2 :	*Be familiar with the different discretization techniques*
CLR-3 :	*Know the CFD solution techniques in compressible flow*
CLR-4 :	*Be familiar with incompressible fluid flow problems solution techniques*
CLR-5 :	*Be familiar with the basics of turbulence modeling.*
CLR-6 :	*Be familiar to solve fluid flow problems*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand and apply basic governing equations to different problems.*	*1& 2*	*90*	*85*	*H*	*H*	*H*	*H*			*L*		*M*						
CLO-2 :	*Choose and apply different discretization techniques in solving problems.*	*1*	*90*	*85*	*H*	*H*	*H*	*H*			*L*		*H*						
CLO-3 :	*Choosing different solution techniques to solve numerical problems.*	*123*	*90*	*85*	*H*	*H*	*H*				*L*		*H*						
CLO-4 :	*Solving different incompressible flow problems with appropriate pressure correction and solution techniques.*	*123*	*90*	*85*	*H*	*H*	*H*				*L*		*H*						
CLO-5 :	*Apply turbulence modeling in solving high Reynolds number flows*	*1&2*	*90*	*85*	*H*	*H*	*H*				*L*		*H*						
CLO-6 :	*Choose and apply different discretization and solution techniques to solve fluid flow problems*	*123*	*90*	*85*	*H*	*H*	*H*				*L*		*H*						

		Governing Equations	Dicretisation Techniques	Soluton Techniques And Numerical Methods For Compressible Flow	Finite Volume Method And Techniques For Incompressible Flow	Turbulence Modeling
Duration (hour)		9	9	9	9	9
S-1	SLO 1	*Introduction, various application of computational fluid dynamics*	*Discretization techniques and principles*	*Solution techniques for linear system of equations- Gauss elimination method.*	*Introduction to finite volume method(FVM)*	*Concept of boundary layer*
S-2	SLO 1	*Conservation and Non conservation form of governing equations. Models of fluid flow*	*Finite difference method – Forward, Backward difference methods*	*Numerical solution – Gauss Siedel and Tri-diagonal matrix algorithm*	*Discretization of one dimensional steady state heat conduction convection equation using FVM*	*Laminar sub layer logarithmic layer Velocity defect law*
S-3	SLO 1	*Continuity equation derivation in all forms*	*Finite difference method – central difference methods*	*Numerical solution – Jacobie and relaxation techniques*	*Discretization of incompressible Naviers Stokes Equations using finite differences*	*Concept of turbulence, Reynolds averaging*
S-4	SLO 1	*Momentum equation derivation*	*One dimensional steady state heat conduction problem -Explicit method*	*Solution techniques for ordinary differential equations, Linear multistep method*	*Concept of staggered grid.*	*Time average equations for turbulent flow*
S-5	SLO 1	*Energy equation derivation*	*One dimensional steady state heat conduction problem -Implicit method*	*Predictor and corrector scheme – McCormack technique*	*Pressure correction method*	*Boissuniq approximation method, Types of turbulence models –*
S-6	SLO 1	*Different types of boundary conditions – Dirichlet, Neumann ,Cauchy and Robbins boundary conditions with examples*	*Discretization of one dimensional wave equation*	*Solution of supersonic flow through converging-diverging nozzle with predictor and corrector method: Governing equations*	*SIMPLE algorithm and boundary conditions*	*Prandtl mixing length model, One-equation models*
S-7	SLO 1	*Classification of Partial differential equations –elliptic ,parabolic, hyperbolic*	*Stability analysis of different equations, consistency and convergence*	*Numerical method*	*Solution of Couette flow using SIMPLE algorithm*	*Two-equation models*
S-8	SLO 1	*Mathematical behavior of Partial differential equations - Elliptic ,Parabolic equation*	*Problems on stability analysis*	*Boundary conditions, case set-up and results*	*Problems in Couette flow using SIMPLE algorithm*	*Energy cascade mechanism in turbulent flows*
S-9	SLO 1	*Mathematical behavior of Partial differential equations - Hyperbolic equations –well posed problems*	*Discussion on CFL condition*	*Problems in supersonic flow through converging-diverging nozzle*	*Alternating direction implicit method and application to unsteady two dimensional heat conduction*	*Comparison of merits and demerits of different turbulent models*

Course Code	18MEE442T	Course Name	ADVANCED ENGINEERING THERMODYNAMICS	Course Category	P	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Engineering Thermodynamics (18MEC101T)	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Steam tables, Mollier and generalized compressibility chart		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Familiarize with entropy, exergy and thermodynamics properties.*
CLR-2 :	*Be familiar with the relationship between thermodynamic properties*
CLR-3 :	*To attain the knowledge about chemical thermodynamics*
CLR-4 :	*To attain the knowledge about statistical thermodynamics*
CLR-5 :	*To attain the knowledge of irreversibility in Thermodynamics*
CLR-6 :	*To attain the knowledge of thermodynamics for various engineering systems*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1	2	3	Program Learning Outcomes (PLO) 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Understand the application of exergy and entropy in varies engineering devices.*	*1, 2, 3*	*95*	*85*	*H*	*H*	*L*	*H*										*H*	
CLO-2 :	*Understand the concept of Real gas behaviour and multicomponent systems.*	*1, 2, 3*	*95*	*85*	*H*	*H*	*L*	*M*										*H*	
CLO-3 :	*Understand the concept Chemical thermodynamics and equilibrium.*	*1, 2, 3*	*95*	*85*	*H*	*H*	*L*	*M*										*H*	
CLO-4 :	*Understand the concept Statistical thermodynamics.*	*1, 2, 3*	*95*	*85*	*H*	*H*	*L*	*M*										*H*	
CLO-5 :	*Understand the concept of irreversible thermodynamics.*	*1, 2, 3*	*95*	*85*	*H*	*H*	*L*	*M*										*H*	
CLO-6 :	*Understand the concept of thermodynamics to various engineering systems.*	*1, 2, 3*	*95*	*85*	*H*	*H*	*L*	*M*										*H*	

		Entropy, Exergy Analysis And Property Relations	Real Gas Behaviour And Multicomponent Systems	Chemical Thermodynamics And Equilibrium	Statistical Thermodynamics	Irreversible Thermodynamics
Duration (hour)		9	9	9	9	9
S-1	SLO-1	Entropy principle and its applications, Entropy transfer mechanisms phase diagram, phase changes, various properties diagram, 1st order phasetransition and 2nd order phase transition	Law of corresponding states, Generalized compressibility chart, Reduced coordinate Phase transition, types of equilibrium and stability, multi-component and multi-phase systems, equations of state.	Degree of reaction, reaction equilibrium, law of mass action, heat reaction Chemical equilibrium, Thermodynamic equation for phase	Statistical thermodynamics: Introduction, energy states and energy levels	Introduction to Steady-state thermodynamics,
S-2	SLO-1	Exergy transfer by heat, work and mass	Stability of thermodynamic systems, Le Chatelier's Principle, Other equation of state: Vander Waals equation of state, Beattie-Bridgeman equation of state	Temperature dependence of the heat of reaction and equilibrium constant, thermal ionization of a monatomic gas	Micro and Macro state, Maxwell-Boltzmann statistics	Irreversibility and causes of irreversibility
S-3	SLO-1	Exergy destruction, exergy balance in closed and open systems	Benedict-Webb-Rubin equation of state, Virial equation of state	Gibbs function change, Fugacity and Activity, heat capacity of reacting gases in equilibrium	Sterling's approximation, Maxwell-Boltzmann distribution function	Thermodynamics forces and thermodynamics velocities
S-4	SLO-1	Exergy analysis of industrial systems: power system and refrigeration systems	Use of generalized charts for enthalphy and entropy departure	Enthalpy of formation, 1st law for reactive system	Bose-Einstein statistics, Femi-Dirac statistics	Onsager's reciprocal relations
S-5	SLO-1	Maxwell relations, Generalized relations for changes in entropy, internal energy and enthalpy.	Fugacity coefficient, lee-kesler generalized three parameter tables	Adiabatic flame temperature, Enthalpy and energy of combustion	Distribution of particles over energy levels, partition function	Calculation of entropy production
S-6	SLO-1	General thermodynamic consideration an equations of state, Evolution of thermodynamics properties from equation of state	Fundamental property relations for systems of variable composition.	Entropy change for reactive system	Microscopic interpretation of heat and work	Thermoelectricity: Application of irreversible thermodynamics to a thermocouple
S-7	SLO-1	Type of equilibrium, local equilibrium condition	Partial molar properties, Real gas mixture.	Absolute entropy, third law of thermodynamics	Statistical interpretation of entropy	Uncoupled effects in thermoelectricity
S-8	SLO-1	condition of equilibrium for a heterogeneous system, Gibbs phase rule	Ideal solution of real gases and liquid, activity, equilibrium in multi-phase systems	2nd law analysis for reactive system	Application of statistics to gases-mono-atomic ideal gas	The coupled equations of thermoelectricity

S-9	SLO-1	Condition of stability and Third law of thermodynamics	Gibbs phase rule for non-reactive components.	chemical exergy, 2nd law efficiency of a reactive system	Principle of equipartition of energy, thermodynamics properties, specific heat of solids	Other effects in Thermocouples

		Basic principles of fluid machinery	Theory of Pumps	Design of pumps	Theory and design of turbines	Cavitation
Duration (hour)		9	9	9	9	9
S-1	SLO 1	*Definition, classification and stages of turbines and pumps*	*Introduction to mixed flow centrifugal pumps*	*Design procedure for pumps*	*Theory of turbines , specific speed, Euler's turbine equation*	*Introduction to cavitation*
S-2	SLO 1	*Basic equations of energy transfer between the fluid and the rotor*	*Calculation of thrust In mixed flow centrifugal pumps*	*Thermal design of pumps -*	*Introduction to Pelton wheel (impulse turbine) - single jet and multiple jet units*	*Cavitation in pumps*
S-3	SLO 1	*Performance characteristics of various turbines and pumps*	*Impellers, Pump casings – volute casing and vortex casing*	*Selection of materials for withstanding high temperature and corrosive fluids*	*Velocity diagrams at the inlet and exit of the buckets*	*Cavitation in turbines*
S-4	SLO 1	*Dimensional analysis*	*Velocity diagrams for mixed flow centrifugal pumps*	*Hydraulic design of pumps*	*Performance calculations considering the losses in the nozzle and the buckets*	*Thomas cavitation factor*
S-5	SLO 1	*Dimensionless parameters in turbines and pumps*	*Calculation of work input to mixed flow centrifugal pumps*	*Selection of the impeller for pumps*	*Introduction to reaction turbine (mixed flow and axial flow) and Degree of reaction*	*Net positive suction head (NPSH)*
S-6	SLO 1	*Specific speed in turbines and pumps*	*Head, Losses and efficiency of mixed flow centrifugal pumps*	*Calculation of casing dimension*	*Francis turbine – Velocity diagrams and Design procedure*	*Effects of cavitation on the performance of turbines and pumps*
S-7	SLO 1	*Velocity triangles of a stage*	*Specific speed, Power requirement and operating characteristics*	*Introduction to computer programs for iterative and interactive design*	*Introduction to Kaplan / Propeller Turbine – axial flow reaction type*	*Cavitation – damage to equipments*
S-8	SLO 1	*Calculation of work output of turbine*	*Minimum starting speed of centrifugal pump*	*System head, Net positive suction head,*	*Velocity diagrams and design procedure for Kaplan turbine*	*Design considerations to avoid cavitation*
S-9	SLO 1	*Computation of efficiency*	*Multi stage pump*	*Priming of pumps*	*Governing of turbines*	*Cavitation and energy harvesting*

Course Code	18MEE445T	Course Name	THERMAL ENERGY STORAGE SYSTEMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MEC101T-Thermodynamics	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Familiarize with the techniques used for storing various forms of energy*
CLR-2 :	*Understand the sensible thermal energy storage systems and materials*
CLR-3 :	*Understand the latent and thermochemical energy storage systems.*
CLR-4 :	*Understand the properties of storage materials and heat transfer fluids*
CLR-5 :	*Know the various techniques used for storing thermal energy in heating/cooling applications and energy savings*
CLR-6 :	*Be familiar with the Thermal energy storage systems and its applications.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Familiarize with the techniques used for storing various forms of energy*	*1*	*90*	*80*	*H*						*L*							*H*	
CLO-2 :	*Understand the sensible thermal energy storage, material and methodology*	*12&3*	*90*	*80*	*H*	*M*					*L*							*H*	
CLO-3 :	*Understand the latent and thermochemical energy storage systems.*	*12&3*	*90*	*80*	*H*	*M*					*M*							*H*	
CLO-4 :	*Understand the properties of storage materials and heat transfer fluids*	*1&2*	*90*	*80*	*H*				*H*		*M*							*H*	
CLO-5 :	*Know the various techniques used for storing thermal energy in heating/cooling applications and energy savings*	*1&2*	*90*	*80*	*H*	*L*			*L*		*H*							*H*	
CLO-6 :	*Be familiar with various techniques used for storing thermal energy in heating/cooling applications and energy savings*	*12&3*	*90*	*80*	*H*	*L*			*M*		*M*							*H*	

		Energy Storage	Sensible Thermal Energy Storage Systems	Latent Thermal And Thermochemical Energy Storage Systems	Thermal Energy Storage Materials	Thermal Storage Applications And Energy Savings
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Basics of Energy storage and its types*	*Sensible Thermal Energy Storage (STES) system and its types*	*Latent Thermal Energy Storage (LTES) system and its types*	*Thermal energy storage materials - Classification, thermosphysical properties*	*Cool Thermal Energy Storage (CTES) concept and comparison of storage technologies*
S-2	SLO-1	*Energy storage by mechanical medium*	*Selection of sensible thermal energy storage materials and methodologies*	*Types and properties of latent heat storage materials and cooling/Heating load calculations*	*Various methods to improve the thermophysical properties of PCM*	*Cool thermal energy storage in process cooling*
S-3	SLO-1	*Energy storage by chemical medium*	*Properties of sensible heat storage materials*	*Encapsulation techniques of LTES (PCM) materials*	*selection criteria for thermal energy storage materials*	*CTES systems building air conditioning applications*
S-4	SLO-1	*Low and Medium temperature thermal storage systems*	*Sensible cooling and heating load calculations*	*Performance assessment of LTES system in building*	*Phase Change Materials – classifications and properties*	*Solar energy storage – passive heating and cooling, green house heating*
S-5	SLO-1	*High temperature thermal storage systems*	*STES Technologies, storage tanks using water and rock bed thermal storage*	*Passive and active LTES systems*	*PCM selection for heating and cooling applications*	*Drying and heating for process industries*
S-6	SLO-1	*Necessity of TES, types of TES technologies and Comparison of thermal energy storage technologies*	*Solar pond thermal storage and building structure thermal storage*	*Thermochemical energy storage principles and materials*	*Heat transfer fluids and properties*	*Solar power plant applications.*
S-7	SLO-1	*Seasonal thermal energy storage Principle*	*Passive solar heating storage*	*Thermochemical energy storage systems - open adsorption energy storage system and closed adsorption energy storage system*	*Selection of heat transfer fluid for heating and cooling applications*	*TES and Energy Savings - utilization of waste or surplus energy, reduction of demand charges and deferring equipment purchases*
S-8	SLO-1	*Seasonal (Source) TES technologies - aquifer thermal storage, borehole thermal storage and cavern thermal storage*	*Active solar heating storage*	*Closed absorption energy storage system solid/gas, thermochemical energy storage system and thermochemical accumulator energy storage system*	*Measuring instruments for thermophysical properties*	*Additional energy savings considerations for TES*

S-9	SLO-1	*Earth-to-air thermal storage, energy piles thermal storage, sea water thermal storage, rock thermal storage and roof pond thermal storage*	*High temperature Sensible Thermal Energy Storage system*	*Floor heating system using thermochemical energy storage and thermochemical energy storage for building heating applications*	*Necessity of improving thermophysical properties*	*Case studies for TES energy savings*

		Fundamentals Of Heat Exchanger	Design Aspects Of Heat Exchangers	Double Pipe Heat Exchangers And Shell & Tube Heat Exchangers	Compact And Plate Heat Exchanger	Condensers And Evaporators
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction, classification of heat exchangers, Recuperator and Regenerator*	*Introduction, effect of turbulence,*	*Introduction, Thermal design and analysis of inner tube and outer tube*	*Classification of compact heat exchangers, Merits and Demerits of Compact heat exchangers*	*Types of Condensers,*
S-2	SLO-1	*Geometry of Construction, Tubular, Plate heat exchangers*	*Effect of friction factor, pressure drop in tube side,*	*hydraulic design and analysis of inner tube and outer tube*	*Design of compact heat exchangers*	*Design of surface condensers- Down-flow*
S-3	SLO-1	*Effect of Extended Surface Heat Exchangers Heat transfer Mechanisms,*	*Effect of Pressure drop in tube bundles.*	*Design of Double Pipe Heat Exchangers- parallel flow & counter flow-problems*	*Factors affecting of compact heat exchangers*	*Types of Condensers, Design of surface condensers- Central-flow*
S-4	SLO-1	*Flow arrangements, Application, Selection of Heat Exchangers.*	*Heat Transfer and pumping power relationship*	*Design of Double Pipe Heat Exchangers- cross flow heat exchanger-*	*Design of plate heat exchangers*	*Design of evaporative condensers- Inverted flow &Regenerative*
S-5	SLO-1	*Overall Heat transfer coefficient, LMTD method for Heat Exchanger analysis for parallel flow heat exchanger*	*Pressure Drop in Bends and fittings*	*Basic components of shell & tube heat exchangers*	*Factors affecting Design of plate heat exchangers*	*Design of evaporative condensers*
S-6	SLO-1	*Overall Heat transfer coefficient, LMTD method for Heat Exchanger analysis for COUNTER flow heat exchanger*	*Effect of fins arrangement ant its geometry on heat transfer*	*Design of shell & tube heat exchangers*	*Operational characteristics of plate heat exchanger*	*Types of Evaporators,*
S-7	SLO-1	*Overall Heat transfer coefficient, LMTD method for Heat Exchanger analysis for CROSS heat exchanger*	*Fouling of Heat exchangers, effect on heat transfer*	*Factors affecting in shell & tube heat exchangers*	*flow arrangements in plate heat exchangers*	*calculation of Evaporator surface and multiple evaporator*
S-8	SLO-1	*ε NTU method for Heat Exchanger analysis*	*Problems in pressure drop and fouling in Heat exchangers*	*Shell side heat transfer. Pressure drop*	*Heat transfer and pressure drop calculations*	*calculation of Evaporator multiple effect*
S-9	SLO-1	*Heat Exchanger design considerations - Material requirement Design codes and its requirement*	*Factors affecting performance of HE/PHE/Condensers/Evaporator*	*Problems on design of shell and tube heat exchangers and its applications*	*Applications of compact and plate heat exchanger*	*Factors affecting in condensers and evaporators of heat changers*

		Combustion Of Fuels	Thermodynamics Of Combustion	Kinetics Of Combustion	Flames	Engine Combustion
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Combustion engineering and its importance*	*Thermo-chemistry first law analysis of reacting systems*	*Rates of reaction*	*Different types of flames Laminar and turbulent*	*Combustion in SI and CI engines*
S-2	SLO-1	*Combustion behavior with different air composition*	*To understand the reacting system and calculations on first law of thermodynamics*	*Determination of rates of reaction*	*Premixed and diffusion flames*	*Stages of combustion in SI and CI engines,*
S-3	SLO-1	*Combustion equations for Theoretical air*	*Acquire knowledge on Adiabatic combustion Temperature*	*Reaction order and molecularity complex reactions*	*Laminar Jet Flame Height – Turbulent flame Lift-Off Height and Blowout Limit.*	*Advanced techniques of combustion in IC engines-learn burn engine –HCCI engine*
S-4	SLO-1	*Combustion equations for excess air*	*Adiabatic combustion Temperature calculations*	*Determination of reaction order and molecularity complex reactions*	*Fuel burning velocity, Determination of Burning velocity, Factors affecting burning velocity*	*Normal combustion and abnormal combustion*
S-5	SLO-1	*Proper Air fuel ratio for combustion*	*Second law analysis of reacting systems*	*Chainreactions - Arrhenius rate equation, collection theory*	*Droplet Evaporation and Combustion*	*Emission norms in Heavy duty and light duty vehicles and its standards BS and Euro norms*
S-6	SLO-1	*Equivalence Ratio*	*Criterion for chemical Equilibrium*	*Calculation on Chain reactions - Arrhenius rate equation, collection theory*	*Flame Quenching, flammability*	*Emissions from premixed combustion*
S-7	SLO-1	*Exhaust gas composition*	*Determination of equilibrium constant for gaseous mixtures*	*Activated complex theory*	*Flame by ignition*	*Emission from non-premixed combustion*
S-8	SLO-1	*Air fuel ratio from exhaust gas composition*	*Evaluation of equilibrium composition*	*Explosive and general oxidative*	*Flame stabilization in open burners*	*Reasons of HC, sulphur , PM, $NO_x$and CO emissions in engines*
S-9	SLO-1	*Heating value of fuels*	*Chemical availability*	*Characteristics of fuels on Explosive and general oxidative*	*Methods to stabilize the flame in open burner*	*Control of HC, sulphur , PM, NO_x and CO emissions in engines*

CLO-4:	*understand the basic energy policies*	*1*	*90*	*80*	*H*						*H*					*L*			
CLO-5:	*acquire knowledge on basic the sustainable development and life-cycle analysis*	*1*	*90*	*80*	*H*						*H*					*L*			
CLO-6:	*acquire knowledge on energy conservation, policies and sustainability of energy systems.*	*1,2&3*	*90*	*80*	*H*			*M*			*H*								

		Energy scenario	Environmental impact ofenergy generation and utilization	Energy conservation	Sustainable development and Energy policies	Life-cycle assessment and Ecology
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Basics of sustainability and sustainable energy sources*	*Global warming and acid precipitation,*	*Energy conservation measures*	*Sustainable energy strategies*	*General description of LCA*
S-2	SLO-1	*Introduction to conventional energy resources*	*Analysis of modeling of earth's climate,*	*Improvement Factors of Energy Conservation*	*Key expectations from implementation of green energy strategies and policies*	*LCA methodology*
S-3	SLO-1	*Introduction to non-conventional energy resources*	*Radiation balance of earth planet*	*Energy conservationcase studies*	*Interdependence of the factors affecting sustainable development*	*Energetic life-cycle analysis*
S-4	SLO-1	*World energy scenario – Conventional energy sources.*	*Greenhouse gases and radiative forcing Concept*	*Energy management-understanding energy costs, Bench marking,Energy performance*	*Modeling instruments and case studies*	
S-5	SLO-1	*World energy scenario – Non-Conventional energy sources.*	*Global warming potentials*	*Energy management policies*	*Sustainable assessment of solar energy*	*LCA of solar PV and thermal systems*
S-6	SLO-1	*Indian energy scenario – Conventional energy sources.*	*Anthropogenic effect on climate and its control*	*Energy conversation in thermal systems*	*Sustainable assessment of fossil fuel*	*LCA of hydrogen-fuel cell vehicles*
S-7	SLO-1	*Indian energy scenario – Non-Conventional energy sources.*	*Impact of energy efficiency*	*Energy conversation in electrical systems*	*fossil fuelcombustion*	*LCA of gasoline vehicles*
S-8	SLO-1	*Energy forecasting*	*other environmental impact aspects and cogeneration*	*Introduction to energyaudit*	*Assessment of green energy strategies*	*Case study, comparative LCA of hydrogen-fuel cells vsgasoline vehicles*
S-9	SLO-1	*Energy security*	*Problems in cogeneration*	*Case study in energyaudit*	*Green energy–based sustainability ratio*	*Case study, comparative LCA of conventional and alternative vehicles*

							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to learn:
CLR-1:	*The basics of fuel cell technology*
CLR-2:	*The concepts of fuel cell electrochemistry*
CLR-3:	*The major types of fuel cells and their modes of operation*
CLR-4:	*The methods of production, storage and utilization of hydrogen as a fuel*
CLR-5:	*The application of fuel cells in power cogeneration*
CLR-6:	*The Safety issues and cost expectation*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1:	*Understand the basics of fuel cell and fuel cell thermodynamics*	1&2	90	80	H														
CLO-2:	*Understand the fuel cell electrochemistry&Implications and use of fuel cell polarization curve.*	1&2	90	80	H						H								
CLO-3:	*The major types of fuel cells and their modes of operation such as Polymer electrolyte membrane fuel cell,Direct methanol fuel cells,Alkaline fuel cell,Molten Carbonate fuel cell&Solid oxide fuel cell*	1&2	90	80	H						H								
CLO-4:	*The methods of production, storage and utilization of hydrogen as afuel*	1&2	90	80	H														
CLO-5:	*The methods of production, storage and utilization of hydrogen as afuel*	1&2	90	80	H														
CLO-6:	*Understand the Fuel Processor &Safety issues and cost expectation*	1	90	80	H						H								

		Introduction to Fuel Cells And Fuel Cell Thermodynamics	Fuel Cell Electrochemistry	Types Of Fuel Cells	Hydrogen Production, Storage And Utilization	Application Of Fuel Cells In Power Cogeneration
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction and overview of fuel cell technology: A simple fuel cell, fuel cell advantages and disadvantages*	*Fuel cell reaction kinetics*	*Classification of fuel cells*	*Hydrogen: Its merit as a fuel, Production methods: from fossil fuels, electrolysis, thermal decomposition*	*Fuel cell power plant, Balance of fuel cell power plant.*
S-2	SLO-1	*Basic fuel cell operation, Layout of a Real Fuel Cell: The Hydrogen–Oxygen Fuel Cell with Liquid Electrolyte.*	*Introduction to electrode Kinetics.*	*Polymer electrolyte membrane fuel cell (PEMFC)*	*Production method from photochemical.*	*Fuel cell power plantstructure.*
S-3	SLO-1	*Difference between fuel cell and batteries, fuel choice.*	*Electro Chemical Energy Conversion – Factors affects Electro Chemical Energy Conversion.*	*Direct methanol fuel cells (DMFC)*	*Production method from photocatalytic, hybrid.*	*Cogeneration*
S-4	SLO-1	*Overview of types of fuel cells (with emphasis on PEMFC and DMFC technology)*	*Conversion of chemical energy to electricity in a fuel cell*	*Alkaline fuel cell (PAFC)*	*Hydrogen storage methods: Onboard hydrogen storage.*	*Benefits and Drawbacks of fuel cell power plant.*
S-5	SLO-1	*Fuel cell thermodynamics: Thermodynamics review, Application of first and second law to fuel cells*	*Reaction rate*	*Molten Carbonate fuel cell (MCFC)*	*Chemical storage & physical storage.*	*Fuel cell electric vehicles.*
S-6	SLO-1	*Heat Potential of a fuel: Enthalpy of reaction, Work potential of a fuel: Gibbs free energy*	*Butler -Volmer equation.*	*Solid oxide fuel cell (SOFC)*	*In metal and alloy hydrides.*	*Motor cycles and bicycles, airplanes*
S-7	SLO-1	*Predicting reversible voltage of a fuel cell under nonstandard-stateconditions.*	*Fuel cell charge*	*Comparison of fuel cell,*	*Carbon nanotubes.*	*Fueling stations.*
S-8	SLO-1	*Basic Parameters of Fuel Cells. Fuel cell efficiency.*	*Mass transport.*	*Performance behavior*	*Glass capillary arrays - pipeline storage and hydrogenutilization.*	*Fuel processor and fuel cell stack.*
S-9	SLO-1	*Basic Parameters of Fuel Cells. Fuel cell efficiency., Comparison with Carnot efficiency.*	*Implications and use of fuel cell polarization curve.*	*Proton Exchange Membrane Fuel Cells.*	*Glass capillary arrays - pipeline storage and hydrogenutilization.*	*Safety issues and cost expectation.*

Course Code	18MEE450T	Course Name	MODELING OF THERMAL SYSTEMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Thermodynamics Fluid Mechanics Heat Transfer	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Understand the fundamentals of the thermal system design*
CLR-2 :	*DevelopMathematical models for the thermal systems*
CLR-3 :	*Apply numerical analysis to solve the mathematical models*
CLR-4 :	*Familiarize with different optimization methods*
CLR-5 :	*Apply optimization methods in problem solving of thermal systems*
CLR-6 :	*Evaluate the economic factors involved in design and application of thermal systems*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Understand system design and steps involved in the formulation of the design process*	1& 2	85	75	H	M	M	M							L				
CLO-2 :	*Development of mathematical models from the physical system*	1&2	85	75	H	H	M	H							M				
CLO-3 :	*Solve the mathematical models using numerical analysis*	1&2	85	75	H	H	M	H							M				
CLO-4 :	*Explore optimization methods to provide feasible solutions in the design of thermal systems*	1&2	85	75	H	H	M	H							H				
CLO-5 :	*Evaluate the economic factors in the design and application of thermal systems*	1,2& 3	85	75	H	H	H	H							H				
CLO-6 :	*familiarize with design and analysis of the thermal systems*	12&3	85	75	H	H	M	H							H				

Title of the module		Introduction to Thermal System Design	Mathematical Modeling of Thermal systems	Numerical Analysis of Thermal Systems	Optimization Methods	Economics and Financial Aspects of thermal system
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Engineering design;Design Versus Analysis, Synthesis for Design*	*Importance of Modeling in Design, Basic Features of Modeling*	*Numerical Model for a System*	*Optimization; basic concepts, optimization methods*	*Calculation of Interest, Simple Interest, Compound Interest, Effective Interest Rate*
S-2	SLO-1	*Need for optimization; Thermal system design*	*Types of Models; Analog Models, Mathematical Models, Physical Models, Numerical Models, Interaction Between Models*	*Modeling of Individual Components*	*Optimization of Thermal Systems, Practical Aspects in Optimal Design*	*Profitability estimate; Cost of return earnings*
S-3	SLO-1	*Basic Characteristics of thermal design; Analysis Types*	*Development of Mathematical Modeling, General Procedure, Final Model and Validation*	*System Simulation, Importance of Simulation Methods for Numerical analysis*	*The Lagrange Multiplier Method, Basic Approach, and Physical Interpretation,*	*Data requirements for calculation of various cash flow techniques*
S-4	SLO-1	*Formulation of the Design Problem, Variables, Constraints and Limitations*	*Physical Modeling, Dimensional Analysis, Modeling and Similitude*	*Simulation: Steady& Lumped Systems*	*Significance of the Multipliers, Optimization of Unconstrained Problems*	*Financial analysis; Discounted & non discounted cash flow techniques*
S-5	SLO-1	*Design Types; Conceptual Design, Innovative Conceptual Design ; Modifications in the Design of Existing Systems*	*Development of a Numerical Model Solution Procedures*	*Dynamic Simulation of Lumped Systems*	*Search Methods, Basic Considerations, Importance of SearchMethods,*	*Pay back period method; Average rate of return (ARR) method*
S-6	SLO-1	*Steps involved in the Design Process*	*Curve Fitting; Exact Fit, Best Fit*	*Distributed systems, simulation of large systems*	*Golden Search method and typical exercise problem*	*Simple problems on pay back and ARR*
S-7	SLO-1	*Problems on Thermal Resistance and Capacitance*	*Problems on exact fit*	*Numerical Simulation Versus Real System,*	*Fibonacci Search method*	*Net present value method (NPV); Profitablity Index method (PI) ; Simple problems*
S-8	SLO-1	*Problems on Building Heating with variable temperatures*	*Problems on best fit*	*Design of Systems for Different Application*	*Problems on Fibonacci Search method*	*Internal rate of return method (IRR) & Benefit cost method (BCR); Simple Problems*
S-9	SLO-1	*Problems on unsteady state heat transfer*	*Problems on nonlinear least squares*	*Problem on numerical modeling of fluid flow systems*	*Steepest Ascent/Descent Method*	*Comparison between NPV and IRR methods*

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Expose the basics of microprocessors*
CLR-2 :	*Introduce the need and use of Interrupt structure*
CLR-3 :	*Impart the applications of microprocessor*
CLR-4 :	*Enable to understand the architecture of microcontroller*
CLR-5 :	*Expose the instruction set and register set of microcontroller*
CLR-6 :	*Impart knowledge about different peripheral interfacing devices*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand the basics of microprocessors*	1	95	90	H	L	M	L	H	-	-	-	-	-	-	-	M	-	M
CLO-2 :	*Use the processors for various applications*	3	90	85	H	L	L	M	M	-	-	-	L	-	-	L	M	-	H
CLO-3 :	*Develop the assembly language programs*	1	85	80	H	L	L	L	M	-	-	-	M	-	-	L	M	-	L
CLO-4 :	*Understand the interfacing techniques*	3	80	75	H	L	L	M	H	-	-	-	M	-	-	L	M	-	M
CLO-5 :	*Understand the internal architecture of microcontroller*	2	80	75	H	L	L	M	M	-	-	-	M	-	-	L	M	-	L
CLO-6 :	*Use microcontroller with different peripherals*	3	90	85	H	L	M	M	H	-	-	-	H	-	-	L	H	-	M

Duration (hour)		12	12	12	12	12
S-1	SLO-1	*Introduction to 8086 microprocessor-Internal Architecture*	*Peripherals and Interfacing-Interfacing I/O Ports*	*Application of Microprocessor-Microprocessor based Aluminium Smelter Control, Process Description*	*Introduction to 8051 Microcontroller-Microcontroller Block Diagram*	*Microcontroller Interfacing and Applications- System Design - Traffic Light Control*
	SLO-2	*Physical Memory Organization*	*Interfacing I/O Ports*		*Microcontroller Block Diagram*	*Switching Circuit*
S-2	SLO-1	*Addressing Modes*	*8086 Interrupts*	*Microprocessor based Aluminium Smelter Control, Process Description*	*Instruction Set*	*8051 Hardware Interface - Operation Sequence*
	SLO-2		*Interrupt Responses*			
S-3	SLO-1	*Instruction Set*	*Direct Memory Access (DMA)*	*Lab 7: Program to perform following conversion : BCD to ASCII BCD to hexadecimal*	*Register Set*	*System Design - Washing Machine Control*
	SLO-2		*I/O Mode*			*Washing Cycle*
S-4	SLO-1	*Lab1: Basic arithmetic operations*	*Lab 4: Sorting of array in: Ascending order*		*Lab 10: A/D and D/A converter interface*	*Lab 13: Fabrication of 8-bit LED interfaces for 8085 kit through 8155 and 8255*
	SLO-2					
S-5	SLO-1		*Lab 4: Sorting of array in: Descending order*	*Design of Microprocessor based Pattern Scanner System BCD to hexadecimal*		
	SLO-2					
S-6	SLO-1	*I/O Addressing Capability*	*Interfacing Analog to Digital Data Converters*	*Design of Microprocessor based Pattern Scanner System BCD to hexadecimal*	*Memory*	*LCD Interfacing*
	SLO-2				*I/O Addressing*	*Keyboard Interfacing*
S-7	SLO-1	*General Bus Operation*	*Interfacing Digital to Analog Converters*	*Lab 8: Program to demonstrate decision making and looping operation*	*Interrupts*	*Relays and opt Isolators*
	SLO-2					*Stepper Motor Interfacing*
S-8	SLO-1	*Lab2: Basic Logical operations*	*Lab 5: Program to demonstrate string manipulations*		*Lab 11: Key board and Display*	*Lab 14: Interfacing and programming of 8255. (E.g. traffic light controller)*
	SLO-2					
S-9	SLO-1			*Design of an Electronic Weighing Bridge*		
	SLO-2					

S-10	SLO-1	*Assembler Directives*	*Stepper Motor Interfacing*	*Design of an Electronic Weighing Bridge*	*Design of Microcontroller based Length Measurement System for Continuously Rolling Paper*	*DC motor Interfacing*
	SLO-2	*Operators*				*PWM*
S-11	SLO-1	*Lab 3: Transfer of block to another location in reverse order*	*Lab 6: Program to demonstrate Factorial of given numbers*	*Lab 9: Program to demonstrate parameter passing methods*	*Lab 12: Stepper motor interface*	*Lab 15: Interfacing DC motor and Servo motor*
	SLO-2					
S-12	SLO-1					
	SLO-2

Course Code	18MEE703T	Course Name	INDUSTRIAL ROBOTICS AND AUTOMATION	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book/Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Introduce the basics of robotic technology and its applications*
CLR-2 :	*Impart knowledge on robot motion analysis and control*
CLR-3 :	*Explore the application of robot in manufacturing and assembly*
CLR-4 :	*Impart knowledge on automation and control technologies in manufacturing*
CLR-5 :	*Introduce the concept of automated material transport systems*
CLR-6 :	*Impart knowledge on fundamentals and applications of automated production lines*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand the basics of robot anatomy, control and sensing system*	*1*	*90*	*85*	*M*	*L*	*L*	*L*	*M*	-	*L*	-	*M*	*L*	*L*	-	*H*	-	*H*
CLO-2 :	*Gain knowledge on robot manipulator kinematics, path control and dynamics*	*2*	*90*	*85*	*H*	*M*	*L*	*M*	*M*	-	*M*	-	*L*	*M*	*L*	-	*H*	-	*L*
CLO-3 :	*Understand the application of robot in manufacturing and assembly*	*2*	*90*	*85*	*M*	*M*	*M*	*L*	*M*	*L*	*M*	-	*M*	*H*	*L*	-	*H*	-	*M*
CLO-4 :	*Gain knowledge on various elements of automations in manufacturing*	*2*	*90*	*85*	*L*	*M*	*L*	*M*	*H*	-	*L*	-	*L*	*L*	*M*	-	*H*	-	*H*
CLO-5 :	*Understand the concept of automated guided vehicle system for shop floor application*	*2*	*90*	*85*	*M*	*L*	*L*	*M*	*H*	-	*L*	-	*L*	*L*	*M*	-	*H*	-	*M*
CLO-6 :	*Gain knowledge on automated storage and retrieval system and automated assembly system*	*2*	*90*	*85*	*M*	*M*	*L*	*M*	*M*	-	*L*	-	*M*	*H*	*M*	-	*H*	-	*H*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to Robotics*	*Introduction to manipulator kinematics – position representation*	*Robot Applications in Manufacturing:*	*Automation in production systems*	*Automated material transport systems, storage system and assembly system : Introduction*
	SLO-2	*History of Robots*	*forward and reverse transformation of the 2 degree of freedom arm*	*General consideration in Robot Material Handling*	*Automated manufacturing system*	*Automated Guided Vehicle system*
S-2	SLO-1	*Robot Anatomy*	*3 degree of freedom arm in two dimensions*	*Material Transfer Application – pick and place operations*	*Computerized manufacturing and support systems*	*AGV types*
	SLO-2	*Components*	*4 degree of freedom manipulator in three dimensions*	*Palletizing and related operations*	*Reasons for automating*	*Applications*
S-3	SLO-1	*Work Volume*	*Homogeneous transformations and Robot kinematics, parallel kinematics*	*Machine Loading and unloading*	*Automation principles and strategies – The USA principle*	*Vehicle Guidance*
	SLO-2	*Polar, cylindrical and cartesian*	*Kinematic equations using Homogeneous transformations*	*Die casting, plastic moulding*	*Strategies for Automation and process improvement*	*Routing*
S-4	SLO-1	*Robot drive systems*	*Solving the kinematic equations*	*Forging and related operations*	*Automation Migration strategy*	*Traffic Control*
	SLO-2	*Hydraulic drive*	*Examples*	*Machining operations, Stamping press operations*	*Manual, automated and automated integrated production*	*Safety*

S-5	SLO-1	*Electric drive*	*A discussion on orientation*	*Robots used in Spot welding*	*Basic elements of an Automated System*	*System Management*
	SLO-2	*Pneumatic drive*	*Roll, pitch and yaw for a manipulator wrist mechanism*	*Application and benefits*	*Power to accomplish the Automated Process*	*Autonomous intelligent vehicle*
S-6	SLO-1	*Control systems*	*Manipulator path control – motion types*	*Robots used in Continuous Arc welding*	*Program of instructions*	*Automated storage Systems*
	SLO-2	*Dynamic performance*	*joint space schemes*	*Problems for Robots in Arc welding, applications, features of the welding robot, sensors, advantage and benefits*	*Control system*	*Retrieval Systems*
S-7	SLO-1	*Precision of Movement, Spatial resolution*	*Robot dynamics analysis,*	*Robots used in Spray Coating, and additive manufacturing*	*Advanced automation functions –*	*Carousel Storage Systems.*
	SLO-2	*Accuracy, Repeatability*	*Static analysis,*	*Application and benefits*	*Safety monitoring,*	
S-8	SLO-1	*End Effectors – grippers*	*Compensating for gravity,*	*Other Processing operation using Robots*	*Maintenance and repair diagnostics,*	*Automated assembly system –*
	SLO-2	*tools*	*Robot arm dynamics*	*Drilling, Grinding, Riveting*	*Error detection and recovery*	*system configuration,*
S-9	SLO-1	*Robotic sensors*	*Configuration of a Robot controller*	*Assembly system configurations - Single work station assembly,*	*Levels of automation*	*parts delivery at work stations,*
	SLO-2	*Types of sensors*	*General robot controller elements*	*series assembly system, parallel assembly system*	*Device, machine, cell or system, plant, enterprise levels.*	*applications.*

Course Code	18MEE704T	Course Name	PLC AND ITS APPLICATIONS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book/Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Impart PLC principle to reduce the human efforts by means of automation*
CLR-2 :	*Identify the main parts of PLC and hardware components*
CLR-3 :	*Analyze and interpret typical PLC timer ladder logic programs*
CLR-4 :	*Acquire knowledge on HMI remote control monitoring in industrial automation*
CLR-5 :	*Learn PLC process – control design and PID configuration*
CLR-6 :	*Design PLC control system I/O and its applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Utilize the parts of machine controller diagram including rungs, branches of PLC*	2	85	80	M	-	-	-	M	-	-	-	-	-	-	-	L	-	L
CLO-2 :	*Understand the equipment used to program a PLC and mnemonic code*	2	90	85	M	-	-	-	-	-	-	-	-	-	-	-	M	-	L
CLO-3 :	*Gain knowledge on hardwired and Human Machine Interface communicate with PLC*	2	85	80	H	-	M-	M	-	-	-	-	-	-	-	-	L	-	M
CLO-4 :	*Learn the functions of PLC process – control design and elements*	2	85	80	H	-	-	-	-	-	-	-	-	-	-	-	L	-	L
CLO-5 :	*Understand basic knowledge of PLCs concepts and its application in industries*	3	90	85	H	-	M	M	-	-	-	-	-	-	-	-	M	-	H
CLO-6 :	*Develop complete system of PLC to meet industrial tasks*	2	85	80	H	M	H	H	M	-	-	-	M	-	M	-	H	-	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction*	*Control system classifications*	*Advanced program techniques-Introduction*	*Introduction: level of lontrol & automation*	*Case studies of manufacturing and process automation*
	SLO-2	*History of the PLC*	*Manual and auto control system*	*Physical components vs program components*	*Components of control system*	*PLC interface to a robot*
S-2	SLO-1	*Principles of operation*	*Automated system building block*	*RS Flip Flop, one shot,*	*Control elements of industrial automation*	*Case studies of on - off control*
	SLO-2	*Benefits of PLC*	*Requirements for industrial control*	*D Flip Flop, T Flip Flop*	*Examples of control requirements*	*Automatic control in manufacturing*
S-3	SLO-1	*Various parts of PLC*	*Motor magnetic starter*	*Forms of counters*	*Selection criteria for control elements*	*Water tank level control*
	SLO-2	*Hardwired system replacement*	*Process control choices*	*Counter application*	*Standardization*	*Irrigation - Canal water level control & logic diagram*
S-4	SLO-1	*Functions of PLC*	*Components of modularized PLC*	*Sequencers*	*Signal conversion*	*Filling of bottle - Case study*
	SLO-2	*Need for PLCs and its advantages*	*PLC configuration*	*Sequential functional chart*	*Quantification errors and resolution*	
S-5	SLO-1	*Inputs & Outputs of PLC*	*Introduction to human machine interface*	*NAND logic function*	*Process control system*	*Conveyor System Speed Control - Case Study*
	SLO-2	*Common types of mechanical design for PLCs*	*Device and PLC / HMI configuration*	*NOR logic function*	*Control Strategy and types*	
S-6	SLO-1	*PLC Architecture and Wiring Diagrams*	*Fundamentals of human machine interfacing*	*AND ladder Rung*	*PLC Selection factors*	*Coal Handling System- Case Study*
	SLO-2	*Internal structure Architecture of PLC*	*HMI-PLC application*	*OR ladder Rung*	*PLC Families*	
S-7	SLO-1	*Basic components and their symbols of Ladder diagram*	*Network standards*	*Types of timer*	*Feedback control of continuous systems*	*Multi-Unit Chemical Process- Case Study*

	SLO-2	*Functions & function blocks of Ladder diagram*	*Network systems role in industry*	*On/off cyclic timer*	*PLC systems and safety*	
S-8	SLO-1	*Switches& Its types*	*Number systems*	*Simple and complex branches*	*PID control configuration*	*Commissioning of PLC systems*
	SLO-2	*Relay systems*	*PLC data*	*standard format program*	*PID control systems*	*Fault Finding Techniques*
S-9	SLO-1	*PLC size and Applications*	*PLC in automation technology*	*Logical Actuators: solenoid, valves cylinders*	*Design cases: Oven temperature control, supervisory control and data acquisition*	*Power Plant Monitoring and Control*
	SLO-2	*PLCs versus other technologies*	*Examples of commercial systems involving PLC*	*Logical Actuators: hydraulics and pneumatics*	*Position measurement*	*Other Applications of PLC*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Traditional production planning, forecasting, process planning*	*Introduction to Group Technology*	*Introduction to FMS*	*Manufacturing Cell, Product flow from cell to cell*	*FMS software – Introduction*
	SLO-2	*Estimating, master scheduling, and various steps involved in planning and control*	*Part families*	*Basic components of FMS*	*Classification of Cell*	*General structure and requirements*
S-2	SLO-1	*Problems in production planning and control*	*Introduction to parts classification and coding*	*Application Characteristics of FMS*	*Unattended machining*	*Advantages of FMS software*
	SLO-2	*Cycle of activities*	*Coding system architecture*	*Significance of FMS*	*Features and requirement*	*Activities and functions to be performed by FMS software, within the system*
S-3	SLO-1	*Computer Integrated production management systems*	*Opitz system structure, classification system*	*Types of FMS*	*Differences between FMS and FMC*	*Types of FMS software modules*
	SLO-2	*Cycle of activities in CIPMS*	*MICLASS system*	*Types of FMS layouts*	*Introduction to JIT, Goals*	*Work-order processing*
S-4	SLO-1	*Cost Planning*	*Code system*	*Factors influencing FMS layout*	*Objectives of JIT, Ingredients*	*Data distribution and collection*
	SLO-2	*Cost Control*	*Group Technology machine cells*	*Objectives, AIMS of FMS*	*Quality and Quantity Principles of JIT*	*System diagnostics and maintenance*
S-5	SLO-1	*Inventory types*	*Types of GT machine cells*	*Advantages of FMS*	*Primary quantity JIT principles*	*Tool management*
	SLO-2	*Inventory Management*	*Benefits of Group technology*	*Disadvantages of FMS*	*Benefits of JIT*	*Traffic management and control*
S-6	SLO-1	*Material Requirements Planning*	*Product design benefits, tooling and setups*	*Area of Application of FMS in an Industry*	*JIT implementation*	*Quality control management*
	SLO-2	*Basic MRP concepts*	*Material handling*	*Various equipment and their functions required for an FMS*	*KANBAN/CARD system introduction*	*Fixtures and work piece control*

S-7	SLO-1	*Inputs to MRP*	*Production and inventory control*	*CIM technology*	*Push Vs pull system*	*Planning scheduling and simulation*
	SLO-2	*Master production schedule, bill of materials, Inventory record file*	*Employee satisfaction*	*Hierarchy of CIM*	*Dual card KANBAN*	*Computer simulation*
S-8	SLO-1	*Principles of MRP*	*Process planning procedures*	*Direct Real Time schedule control*	*Dual card KANBAN for milling and drilling*	*General phases of simulation analysis*
	SLO-2	*MRP output reports*	*System planning-objective, guideline,*	*Major functions of FMS host*	*Single card KANBAN concept*	*Functions*
S-9	SLO-1	*Benefits of MRP*	*System definition and sizing-*	*FMS concepts*	*Single card KANBAN- Example*	*FMS hosts*
	SLO-2	*MRP-II*	*Human resources*	*Process routings in an FMS*	*Benefits of KANBAN system*	*Data exchanges*

							3	0	0	3

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes / Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
CLR-1 :	*Acquire knowledge on IoT enabling technologies*																		
CLR-2 :	*Impart knowledge on work logic of IoT in manufacturing system*																		
CLR-3 :	*Acquire knowledge on prototyping and production*																		
CLR-4 :	*To know the role of IoT in laser cutting, 3D printing, CNC milling*																		
CLR-5 :	*To know the use of smart objects for smart applications*																		
CLR-6 :	*Track and trace real time manufacturing information*																		
Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Understand the design principles of connected devices*	*2*	*90*	*80*	*H*	*M*	*M*	*L*	*L*	-	-	-	-	-	-	*M*	*H*	-	*H*
CLO-2 :	*Apply IoT models in manufacturing technologies*	*2*	*85*	*80*	*H*	*M*	*L*	*L*	-	-	-	-	-	-	-	*M*	*H*	-	*H*
CLO-3 :	*Understand the importance of standardization in IoT*	*1*	*90*	*85*	*H*	*L*	*L*	-	*M*	-	-	-	-	-	-	*M*	*H*	-	*H*
CLO-4 :	*Understand the capabilities and application of IoT*	*2*	*90*	*85*	*H*	*L*	-	-	*L*	-	-	-	-	-	-	*M*	*M*	-	*M*
CLO-5 :	*Become master of IoT for business model*	*1*	*85*	*80*	*H*	*L*	-	-	-	-	-	-	-	-	*M*	*M*	*M*	-	*M*
CLO-6 :	*Acquire the real time manufacturing information*	*2*	*85*	*80*	*H*	*L*	-	-	-	-	-	-	-	-	-	*M*	*M*	-	*M*

Duration (Hour)		9	9	9	9	9
S-1	SLO – 1	*Introduction to IoT*	*Existing manufacturing paradigms and their limitations*	*Real time status monitoring and Real time production guiding*	*IoT application for industry value creation and challenges*	*Configuration of smart shop floor*
	SLO – 2	*Definition and characteristic of IoT*	*Agile manufacturing, Networked manufacturing*	*Real time production data sharing, Real time production requeuing*		
S-2	SLO – 1	*Physical design of IoT*	*Reconfigurable manufacturing system*	*Deployment of multi-sensors, multiple sensor selection, multiple sensor manager*	*IoT application requirement and capabilities*	*The logical flow of the prototype system*
	SLO – 2	*Physical design of IoT*	*Product service system and industrial product service system,*	*Multisource manufacturing information capturing and sharing*	*Challenges faced by IoT industries application*	*The framework of the prototype system*
S-3	SLO – 1	*Logical design of IoT*	*Manufacturing grid*	*Information encapsulation*	*Future factory concepts*	*The framework of the prototype system*
	SLO – 2	*Logical design of IoT*	*Cloud manufacturing*	*Case study – hardware device, software system*	*The smart factory initiative*	*Deployment of hardware devices*
S-4	SLO – 1	*IoT enabling technologies*	*Limitations of agile manufacturing system*	*IoT standardization*		*Workflow of the prototype system*
	SLO – 2	*IoT enabling technologies*	*Applications of IoT in manufacturing system*	*Importance of standardization – beginning of everything*	*From technologies to technology concept*	*Task driven manufacturing resource configuration model*
S-5	SLO – 1	*IoT levels and deployment models*	*Key features and limitations of IoT in manufacturing system*	*The need of methods and tools and corresponding research*		*Production scheduling / rescheduling model*
	SLO – 2	*IoT levels and deployment models*	*Integration framework of real time manufacturing information – sharing and integration*	*Gaps between IoT standardization, IoT research, IoT development and IoT innovation*	*Brownfield IoT : Technologies for retrofitting*	*The scheduling and rescheduling method*

S-6	SLO – 1	*Design principles for connected devices*		*M2M service layer standardization*		*IoT enabled smart materials handling module*
	SLO – 2	*Design principles for connected devices*	*Real time manufacturing data processing*	*Prototype and production*	*Smart objects and smart applications*	
S-7	SLO – 1	*Calm and ambient technology*		*Physical prototypes and mass personalization*		*IoT enabled smart station*
	SLO – 2	*Calm and ambient technology*	*Sharing and exchange service*	*Open source versus closed source*	*Four aspects in your business to master IoT*	
S-8	SLO – 1	*Internet principles*	*IoT enabled smart assembly station*	*Prototyping embedded devices, sensors, actuators*		*Operation guidance from the system*
	SLO – 2	*Internet Communication – overview*	*Overall architecture of IoT enabled smart assembly station*	*Embedded computer basics, Arduino, Raspberry Pi, sketch, iterate and explore*	*Value creation from big data and serialization from pharmaceutical industry*	*Real time queuing under exceptions*
S-9	SLO – 1	*Overall architecture of IoT manufacturing system (MS)*	*IoT enabled smart trolley*	*Non digital methods, Laser cutting, 3D printing, types of 3D printing*		*Real time manufacturing information track and trace*
	SLO – 2	*The work logic of IoT MS, Description of core technologies of IoT MS*	*IoT enabled materials handling*	*Moving to manufacture, Moving to manufacture, CNC milling, recycling*	*IoT for oil and gas industries*	*Real time production performances monitor module*

Course Code	18MEE707T	Course Name	VIRTUAL INSTRUMENTATION	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book/Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Impart knowledge on virtual instrumentation and differentiate it from conventional instruments*
CLR-2 :	*Learn the basic programming concepts*
CLR-3 :	*Learn different Data Acquisition System*
CLR-4 :	*Impart knowledge on interfacing of virtual instrumentation*
CLR-5 :	*Provide knowledge in process analysis by virtual instrumentation tool.*
CLR-6 :	*Develop real time applications using LabVIEW*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
		Learning 1	2	3	PLO 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
CLO-1 :	*Describe about virtual instrumentation*	1	90	85	M	-	M	L	H	-	L	-	-	-	-	L	H	-	H
CLO-2 :	*Get adequate knowledge on virtual instrumentation tool sets*	2	90	85	H	-	-	L	H	-	L	-	-	-	-	L	H	-	H
CLO-3 :	*Describe data acquisition*	2	90	85	H	-	M	M	H	-	L	-	M	-	-	L	H	-	H
CLO-4 :	*Understand virtual instrumentation programming techniques*	2	90	85	H	-	M	L	H	-	-	-	L	-	-	L-	H	-	H
CLO-5 :	*Gain knowledge on interfacing and networking of virtual instrumentation*	2	90	85	H	-	M	M	H	-	-	-	L	-	-	-	H	-	H
CLO-6 :	*Use virtual instrumentation tool for process monitoring*	2	90	85	H	-	M	L	H	-	L	-	M	-	-	-	H	-	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Historical perspective, advantages of virtual instrumentation*	*Modular Programming in Lab-VIEW*	*Introduction to PC based data acquisition*	*Common Instrument Interfaces*	*Use of Analysis tools*
	SLO-2	*Block diagram of a virtual instrument*	*Building a connector pane*	*Sampling fundamentals*	*Current loop*	*Fourier transforms*
S-2	SLO-1	*Architecture of a virtual instrument*	*VIs and sub-Vis*	*Analog Input/output techniques*	*Serial port Communication*	*Power spectrum*
	SLO-2	*Conventional instruments versus Traditional instruments*	*Opening and editing sub-Vis*	*Digital Input/output techniques*	*Instrument driver VIs*	*correlation methods*
S-3	SLO-1	*Hardware in virtual instrumentation*	*Placing sub-VIs, Saving sub VIs*	*Buses*	*RS 232C/ RS485*	*Windowing and filtering*
	SLO-2	*Software in virtual instrumentation*	*Loops and charts, Terminals inside or outside loops*	*ADC, DAC*	*GPIB*	*Distributed I/O modules*
S-4	SLO-1	*Layers of virtual instrumentation software*	*Shift Registers*	*Counters and timers*	*Using other interfaces*	*Virtual Laboratory, Simulation of level*
	SLO-2	*Graphical system design model*	*Arrays, creating arrays*	*DMA*	*Bus Interfaces: USB, PCMCIA*	*Major equipments- Oscilloscope, Digital Multi-meter*
S-5	SLO-1	*Virtual instrumentation for test*	*Deleting, inserting and replacing elements*	*Software and hardware installation*	*VXI, SCSI*	*Temperature data acquisition system*
	SLO-2	*Virtual instrumentation for industrial I/O and control*	*Clusters and graphs*	*Calibration, resolution*	*PCI, PXI, Fire wire*	*Image acquisition and processing*
S-6	SLO-1	*Virtual instrumentation for design*	*Case and sequence structures*	*Signal conditioning*	*PXI system controllers*	*Image acquisition using line sensor*
	SLO-2	*Graphical programming in data flow*	*formula nodes, feedback nodes*	*Computer based measurements system*	*Ethernet control of PXI.*	*Image acquisition using a single sensor*
S-7	SLO-1	*Comparison with conventional programming*	*Control timing*	*Selecting and configuring data acquisition system*	*Networking basics for office*	*Motion control employing stepper motor*

	SLO-2	*Virtual instrumentation in the engineering processes*	*Local and global variables*	*Concept of universal data acquisition card*	*Networking basis for industrial applications*	*On-Off controller PID Controller*
S-8	SLO-1	*Virtual instrumentation personal computers*	*State machine*	*Data acquisition interface requirements*	*VISA and IVI.*	*PID controller theory*
	SLO-2	*Graphical programming and textual programming*	*String and file I/O*	*Use of timers/counters*	*VISA Programming terminology*	*PID tuning software*
S-9	SLO-1	*Development of Virtual Instrument using Graphical user interface (GUI)*	*Instrument Drivers*	*Signal sources, measurement system*	*VISA and Serial*	*Advantages and Limitations of PID controller*
	SLO-2	*Real-time systems*	*Publishing measurement data in the web, cable news network*	*Increasing the measurement quality*	*IVI software technology*	*Advantages and Limitations of On-Off controller*

CLR-4 :	*Program the PLC*
CLR-5 :	*Design mechatronics system and its applications*
CLR-6 :	*Case studies*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*To discuss mechanical systems used in Mechatronics*	1	90	85	H	L	H	H	-	-	L	-	-	-	-	-	H	-	H
CLO-2 :	*To integrate mechanical, electronics, control and computer engineering in the design of mechatronics systems*	2	85	80	H	L	H	M	L	-	L	-	-	H	-	-	M	-	M
CLO-3 :	*Use mathematical methods and tools to analyse and develop electrical and mechanical engineering systems*	3	85	80	L	M	L	-	L	-	-	-	-	-	-	L	M	-	H
CLO-4 :	*Identify, define, formulate and solve complex mechatronics engineering problems*	2	85	80	H	M	H	H	H	-	L	-	-	-	M	-	H	-	H
CLO-5 :	*Ability to work in design, implementation and integration of mechatronics engineering applications*	2	85	80	H	-	H	-	M	-	L	-	-	L	-	-	M	-	M
CLO-6 :	*Conduct feasibility study for using mechatronics systems for solving assistive technology applications*	2	85	80	M	M	-	H	L	-	-	-	-	L	M	L	M	-	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Mechatronics*	*Mathematical models*	*Microprocessor systems*	*Introduction of basic structure*	*Stepper motor*
	SLO-2	*Engineering Design*				
S-2	SLO-1	*Classification of Sensors*	*Building Blocks : Mechanical*	*Basic elements of control systems*	*Input and output processing*	*Stepper motor - types*
	SLO-2	*Classification of transducers*	*Building Blocks : Electrical*			
S-3	SLO-1	*Thermal and electrical sensors*	*Building Blocks : Fluid*	*Microcontrollers*	*Programming*	*Servo motor*
	SLO-2	*Optical sensor*	*Building Blocks : thermal system*			
S-4	SLO-1	*Acoustic sensor*	*System models*	*Microprocessor architecture and terminology*	*Mnemonics*	*Servo motor - types*
	SLO-2	*Pneumatic sensor*				
S-5	SLO-1	*Magnetic sensor*	*Dynamic response of systems*	*Closed loop controllers*	*Timers*	*Case studies of mechatronics system-pick and place robot*
	SLO-2	*Piezo electric sensor*				
S-6	SLO-1	*Transducers: Static characteristics*	*first and second order systems*	*Proportional, derivative and integral controls*	*counters and internal relays*	*automatic car park barrier*
	SLO-2	*Transducers: Dynamic characteristics*		*Derivative and integral controls*		
S-7	SLO-1	*Open loop control systems*	*Modeling dynamic systems*	*PID controller*	*Data handling*	*Engine management system*
	SLO-2	*Closed loop control systems*				
S-8	SLO-1	*Servo mechanism*	*System transfer functions*	*Controllers*	*Selection of PLC*	*Digital camera*
	SLO-2			*Tuning of controller*		
S-9	SLO-1		*Frequency response*	*Adaptive control of machine tools*	*Development of simple ladder programs for specific purposes*	*A PC based computer numerically controlled drilling machine*
	SLO=2

Course Code	18MEE801J	Course Name	ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING	Course Category	E	Professional Elective	L	T	P	C
							2	0	2	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book/Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Learn about Artificial Intelligence and identify the need of AI in Mechanical Engineering*
CLR-2 :	*Learn about different search algorithms*
CLR-3 :	*Learn about Logic controllers, Microprocessors*
CLR-4 :	*Learn about Python Programming*
CLR-5 :	*Apply the concept of Machine Learning for mechanical applications*
CLR-6 :	*Apply Mechanical concepts in AI and build an efficient working environment*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Understand the concept of Artificial Intelligence*	1	90	85	H	L	M	M	H	-	M	H	M	-	-	M	-	-	-
CLO-2 :	*Characterize the concepts of Machine Learning*	1	90	85	H	-	M	M	H	-	M	L	M	-	-	M	-	-	-
CLO-3 :	*Identify the different concepts in Heuristic methods*	1	90	85	H	-	-	M	L	-	-	H	M	L	-	-	M	L	M
CLO-4 :	*Understand MATLAB and Python programming*	2	90	85	H	H	L	M	M	-	L	L	M	L	-	M	M	L	M
CLO-5 :	*Solve problems in Genetic programming*	2	90	85	H	H	-	M	M	-	-	L	M	L	-	L	M	L	M
CLO-6 :	*Apply the basic knowledge of Mechanical in smart manufacturing*	2	90	85	H	M	-	M	H	-	L	L	M	L	-	H	M	L	M

Duration (hour)		12	12	12	12	10
S-1	SLO-1	*Artificial Intelligence and its foundations*	*Lab-4: MATLAB- Optimization methods GA, Fuzzy, Neural & PSO*	*Tutorial 4: Artificial Intelligence in Manufacturing Industry*	*Fuzzy matching techniques*	*Syntax programming for optimization*
	SLO-2	*History of AI, LISP and PROLOG*		*Hebb's Rule, McCulloch and Pitts Neurons*	*Tutorial 6: Microcontrollers*	*Reduced environmental impact by ML*
S-2	SLO-1	*Blind search, Breadth first*	*Formalized symbolic logics*	*Evolutionary Learning: Genetic Algorithm and Problems in GA*	*Lab-12: FLEXSIM Software*	*Harnessing useful data using AI and ML*
	SLO-2	*Lab-1: Python Programming*	*Syntax and semantics for Logics Representing knowledge using rules and rules-based deduction systems*	*Genetic Programming*	*RETE matching algorithm*	*Supply chain Communication*
S-3	SLO-1	*Heuristic search techniques*	*Reasoning under uncertainty*	*Lab-7: Image Processing, Object and Motion detection*	*Object-Oriented representations*	*Cutting waste using AI*
	SLO-2	*Hill climbing technique*	*Bayes' probabilistic inferences*		*Data mining for Mechanical Engineers*	*Integration of man machine system*
S-4	SLO-1	*Best first search technique, A* algorithm,*	*Heuristic methods*	*Markov Chain Monte Carlo (MCMC) methods, Bayesian Networks*	*Lab-13:Hydraulic and Pneumatic simulator*	*Improved customer service using AI*
	SLO-2	*AO* algorithm*	*Fuzzy reasoning*	*Lab:8- Pick and place operation of ABB Robot in Manual Mode*	*Dimensionality Reduction PCA*	*Minimizing Equipment Failures*
S-5	SLO-1	*Lab-2: Machine Learning using python*	*Lab-5: Introduction to SIMULINK & Modelling of problems related to kinematics and dynamics of robot using MATLAB*	*Graphical models Markov Random Fields*	*Single Value Decomposition(SVD), t-Distributed Stochastic Neighbor Embedding (t-SNE) methods*	*Predictive Maintenance*
	SLO-2	*Tutorial:1 Python Programming in Mechanical applications*		*Hidden Markov Models (HMMs)*	*Ensemble Techniques Boosting Bagging*	*Multi-dimensional optimization*
S-6	SLO-1	*Game trees- Numerical*	*Expert system, Relationship between Artificial Intelligence and Mechanical Engineering*	*Lab-9: Pick and place operation of ABB Robot in Teach Pendent method, PLC Controlled material handling system*	*Data visualization in machine learning*	*Artificial Neural network*
	SLO-2	*Minimax algorithm*	*Expert system, Relationship between Artificial Intelligence and Mechanical Engineering*		*Text mining*	*Greedy algorithm*

S-7	SLO-1	*Game playing*	*Diagnosis of rule-based reasoning Case-based reasoning and fault-based tree fault diagnosis*	*Tracking Methods*	*Lab-14:Study on Microcontrollers*	*Greedy algorithm problems*
	SLO-2	*Alpha beta pruning*	*Diagnosis of rule-based reasoning Case-based reasoning and fault-based tree fault diagnosis*	*Python- Basics of coding, Writing and importing code*		*Robotic perception*
S-8	SLO-1	*Lab-3: Basics of MATLAB programming*	*Case study: Manufacturing scheduling*	*Tutorial 5: PLC controllers*	*Case study on driverless vehicles*	*Sensors and effectors*
	SLO-2		*Case study: Manufacturing scheduling*			*Types of sensors and acutators*
S-9	SLO-1	*Definition and importance of Knowledge Representation of knowledge*	*Tutorial 2: Case study in manufacturing industry Case study: Intelligent Diagnostic system for Rotating machinery*	*Lab-10: 8051 Micro controller-Temperature and Traffic control*	*Lab-15: Study on Driverless Vehicles*	*Dynamics and control*
	SLO-2	*Organization and Manipulation Logical Agents*	*Case study: Fault diagnosis to Hot Forging Press*			*Problems in Dynamics*
S-10	SLO-1	*Problems in Genetic Algorithm*	*Lab-6: Sensors and its applications*	*Python coding*	*Application of AI and ML in Inventory control*	*Robotic software architecture*
	SLO-2	*Programming GA in MATLAB*				*Writing Robotic software*
S-11	SLO-1	*Problems in Artificial Neural Network*	*Tutorial 3: Image Processing, Object and Motion detection*	*MATLAB and its applications in Fault detection and Optimization*	*Reducing time of production with AI*	*Robotic programming language*
	SLO-2	*Programming ANN in MATLAB*	*Basics of Machine Learning*		*Cost reduction of production with AI*	*Case study on Humanoid robot*
S-12	SLO-1	*Programming Particle swarm optimization (PSO)*	*Definition & uses of Machine Learning*	*Lab-11: 8051 Micro controller-Temperature and Traffic control*	*Automating quality control using AI and ML*	*Machine Learning in supply chain*
	SLO-2	*Problems in PSO*	*Decision Tree & Practical applications*

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Study the image fundamentals transforms necessary for image processing.*
CLR-2 :	*Study the image enhancement techniques*
CLR-3 :	*Study basic image processing operations*
CLR-4 :	*Overview of image restoration techniques.*
CLR-5 :	*Understand the need for image compression and segmentation*
CLR-6 :	*Understand the rapid advances in Machine vision.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Review the fundamental concepts of a digital image processing system*	2	85	90	M	-	-	M	-	-	-	-	-	-	-	L	L	-	L
CLO-2 :	*Analyze images in the frequency domain using various transforms*	2	85	80	M	L	M	M	-	-	-	-	-	L	-	L	M	-	M
CLO-3 :	*Evaluate the techniques for image enhancement and image restoration*	2	80	85	M	-	M	M	-	-	-	-	-	-	-	L	L	-	L
CLO-4 :	*Analysis different causes for image degradation*	2	90	85	M	-	-	M	L	-	-	-	-	-	-	L	M	-	M
CLO-5 :	*Interpret Image compression standards.*	2	80	80	M	L	-	M	-	-	M	-	-	-	-	L	M	-	L
CLO-6 :	*Interpret image segmentation and representation techniques.*	3	85	80	M	L	L	M	-	-	-	-	M	-	-	L	L		M

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Origins of digital image processing*	*Light used in Machine Vision*	*Image Enhancement Techniques:*	*Image Compression - Measuring image information*	*Types of task and production*
	SLO-2	*Origins of digital image processing*	*Basic Rules and Laws of Light Distribution*	*Spatial and Frequency domain*	*Spatial and temporal redundancy*	*Types of task and production*
S-2	SLO-1	*Fundamental steps in digital image processing*	*Light Filters*	*Spatial Domain*	*Image compression models - Huffman coding*	*System Categories - Common types of systems-sensors-vision sensors-*
	SLO-2	*Fundamental steps in digital image processing*	*Light Filters*	*Point operation &Maskoperation*	*Image compression models - Huffman coding*	*PC based system*
S-3	SLO-1	*Components of image processing system*	*Types of Light Filters*	*Histogram manipulation*	*Image compression models - Arithmetic coding*	*Mechanical Interfaces - Dimension and fixation-*
	SLO-2	*Components of image processing system*	*Types of Light Filters*	*Histogram equalization and procedure*	*Image compression models -Run length coding*	*Mechanical Interfaces - working distance-position tolerance*
S-4	SLO-1	*Elements of Visual Perception*	*Machine Vision versus Closed Circuit Television (CCTV)*	*Linear gray level transformation*	*Digital Image watermarking*	*Electrical interface- wiring and movement-*
	SLO-2	*Basics of Image Sensing and Acquisition*	*Machine Vision versus Closed Circuit Television (CCTV)*	*Linear gray level transformation*	*Digital Image watermarking*	*Power supply- Internal and External date connections.*
S-5	SLO-1	*Image Sampling*	*Imaging Sensors- CCD*	*Nonlinear gray level transformation*	*Image Segmentation- Point, line and edge Detection*	*Discrete Motion Production-*
	SLO-2	*Image Quantization*	*Imaging Sensors- CCD*	*Nonlinear gray level transformation*	*Image Segmentation- Point, line and edge Detection*	*Production-Continuous Motion Production-Line-Scan Processing*
S-6	SLO-1	*Basic Relationships between Pixels*	*Imaging Sensors- CMOS*	*Comparison between smoothing and sharpening spatial filters*	*Edge linking and Boundary Detection*	*Industrial Case Study- Glue Check under UV Light*

	SLO-2	*Basic Relationships between Pixels*	*Imaging Sensors-CMOS*	*Comparison between smoothing and sharpening spatial filters*	*Edge linking and Boundary Detection*	*Industrial Case Study- Glue Check under UV Light*
S-7	SLO-1	*Digital image file formats – GIF*	*Digital Cameras- B/W Sensor and Processing*	*Smoothing frequency domain filters (Ideal, Butterworth, Gaussian)*	*Thresholding, Basics of Global thresholding*	*Industrial Case StudyMultiple Position and Completeness Check*
	SLO-2	*Digital image file formats – JPEG*	*Digital Cameras- B/W Sensor and Processing*	*Smoothing frequency domain filters (Ideal, Butterworth, Gaussian)*	*Using edge to improve global thresholding*	*Industrial Case Study-Multiple Position and Completeness Check*
S-8	SLO-1	*Digital image file formats – PNG*	*Color Digital Cameras*	*Sharpening frequency domain filters (Ideal, Butterworth, Gaussian)*	*Multiple and variable thresholding*	*Industrial Case Study- Pin Type Verification*
	SLO-2	*Digital image file formats – TIFF, BMP*	*Camera Noise&Photon Noise.*	*Sharpening frequency domain filters (Ideal, Butterworth, Gaussian)*	*Multiple and variable thresholding*	*Industrial Case Study- Pin Type Verification*
S-9	SLO-1	*Applications of Digital Image Processing*	*Introduction to video analytics*	*Homomorphic filtering.*	*Region Based Segmentation*	*Industrial Case Study- Robot Guidance*
	SLO-2	*Applications of Digital Image Processing*	*Introduction to video analytics*	*Homomorphic filtering.*	*Pattern recognitions*	*Industrial Case Study-Robot Guidance*

Pre-requisite Courses	NIL	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechanical Engineering	Data Book / Codes / Standards	NIL		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Acquire knowledge on principles of industry 4.0 and building blocks of industry 4.0*
CLR-2 :	*Acquire knowledge on IoT enabled manufacturing systems*
CLR-3 :	*Understand cloud based cyber physical systems in manufacturing*
CLR-4 :	*Apply data analytics in manufacturing*
CLR-5 :	*Understand and apply additive manufacturing technologies*
CLR-6 :	*Acquire knowledge on technologies and application of industry 4.0*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Explain the evolution of industry 4.0*	2	90	80	H	-	M	-	-	-	-	-	-	-	-	M	H	---	H
CLO-2 :	*Explain the concept of IoT*	1	85	80	H	-	M	L	H	-	-	-	-	-	-	H	H	---	H
CLO-3 :	*Understand the application areas of IoT in manufacturing*	2	85	80	H	L	M	L	L	-	-	-	-	-	-	M	M	---	M
CLO-4 :	*Explain the concept of cloud manufacturing*	2	90	85	H	-	H	L	L	-	-	-	-	-	-	M	M	---	M
CLO-5 :	*Explain the advances in robotics in the era of industry 4.0*	1	90	85	H	-	H	L	L	-	-	-	M	L	-	L	M	---	M
CLO-6 :	*Identify advances in virtual factory research and application*	1	85	80	H	-	H	M	L	-	-	-	L	-	L	M	M	---	M

Duration (Hour)		9	9	9	9	9
S-1	SLO – 1	*Industry 4.0 – Definition*	*The concept of IoT*	*Concept of cloud manufacturing*	*Power consumption in manufacturing*	*Advances of robotics in the era of industry 4.0*
	SLO – 2	*Why industry 4.0 and why now?*	*Existing manufacturing paradigms and their limitations – agile manufacturing*	*Real time production information*	*Anomaly detection in air conditioner*	*Recent technological components of robots*
S-2	SLO – 1	*Phases of industrial developments*	*Networked manufacturing*	*Cloud service selection and composition*	*Anomaly detection in air conditioner*	*Artificial intelligence*
	SLO – 2	*Central features of the concept*	*Reconfigurable manufacturing system*	*Overall architecture of manufacturing resources configuration method*	*Smart remote machinery maintenance system*	*Internet of robot things, Cloud robotics*
S-3	SLO – 1	*Principles of industry 4.0*	*Product service system / industrial product service system*	*Cloud machine model*	*Smart remote machinery maintenance system*	*Cognitive approach of cyber physical robotics*
	SLO – 2	*Main characteristics of industry 4.0*	*Manufacturing grid Cloud manufacturing*	*Cloud machine model*	*Quality perdition in steel manufacturing*	*Industrial robotic application*
S-4	SLO – 1	*Building blocks of Industry 4.0*	*Limitations of agile manufacturing system*	*Cloud machine model*	*Quality perdition in steel manufacturing*	*Advances in virtual factory research and application*
	SLO – 2	*The value chain*	*Applications of IoT in Manufacturing system*	*Application of cyber physical system &IoT*	*Predicting drilling efficiency*	*Virtual factory software*
S-5	SLO – 1	*Creating the value chain*	*Key features and limitations of IoT in Manufacturing System*	*Cloud manufacturing framework*	*Techniques used for predictive analytics*	*Additive manufacturing technologies and application*
	SLO – 2	*Benefits of industry 4.0*	*Architecture of IoT – MS*	*Manufacturing capability and manufacturing resource*	*Techniques used for predictive analytics*	*Advantages and disadvantages of additive manufacturing*
S-6	SLO – 1	*Challenges of industry 4.0*	*Integration framework of real time manufacturing information – sharing and integration*	*Cloud architecture*	*Forecast accuracy calculation*	*Application areas of additive manufacturing*

	SLO – 2	Smart manufacturing	Real time manufacturing data processing, sharing and exchange service	Approaches to achieve product information sharing	Forecast accuracy calculation	Impact of additive manufacturing techniques on society
S-7	SLO – 1	Industrial internet of things	The work logic of IoT MS, Description of core technologies of IoT MS	Standardization for cloud manufacturing	Real world case study – definition	Impact on manufacturing and supply chain
	SLO – 2	Gateways	IoT enabled smart assembly station	Standardization for cloud manufacturing	Data gathering and cleaning	Digital traceability through production value chain
S-8	SLO – 1	Wireless Communication technologies	Overall architecture of IoT enabled smart assembly station	Overview of cyber security in industry 4.0 era	Automation based lean production	Digital traceability technologies
	SLO – 2	Industry 4.0 – the way forward	IoT enabled smart trolley	Overview of cyber security in industry 4.0 era	Automation based lean production	Architectural framework of the digital traceability system, Application of digital traceability
S-9	SLO – 1	Technology road map for industry 4.0	IoT enabled materials handling	Security threat and vulnerabilities of IoT	Model application	Project management in digital traceability, Examples for IoT in value creation in different industries
	SLO – 2	Technology road map for industry 4.0	Real time information enabled material handling strategy	Cases – cyber security	Model application	smart manufacturing – maturity model, Smart agriculture, Smart city Smart life and smart health

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering			Data Book/Codes/Standards	Nil

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Identify the fundamental concepts of MES.*
CLR-2 :	*Utilize the core functions of MES.*
CLR-3 :	*Apply technical aspects of MES.*
CLR-4 :	*Identify the requirementsof the factory of the future.*
CLR-5 :	*Evaluation of Cost Effectiveness in MES.*
CLR-6 :	*Implementation in Production and its significance.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1	2	3	Program Learning Outcomes (PLO) 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Apply the fundamental concepts and core function of MES*	3	90	80	H	H	H	H	-	-	-	-	M	M	M	H	H	-	H
CLO-2 :	*Understand what and why MES in modern production systems*	3	90	80	H	H	H	M	-	-	-	-	H	L	M	H	H	-	H
CLO-3 :	*Setup, analysis, and giving possible application of MES*	3	90	80	H	H	H	H	-	-	-	-	H	H	M	H	H	-	H
CLO-4 :	*Know the connection of function within production systems to MES*	3	90	80	H	M	M	M	-	-	-	-	H	M	H	H	H	-	H
CLO-5 :	*Identify the requirements of the factory of the future*	3	90	80	H	H	M	H	-	-	-	-	M	H	M	H	H	-	H
CLO-6 :	*Evaluate the Cost Effectiveness in MES*	3	90	80	H	H	L	M	-	-	-	-	L	H	M	H	H	-	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Historical Development of MES, Standards of MES*	*Core Function—Production Flow-OrientedDesign*	*Integration within the Overall Process*	*Software Architecture, Fundamental Variants*	*Implementing IT Systems in General*
	SLO-2	*Development of Business Data Processing*	*Cross-System Cohesiveness, Classification in the Overall System*	*Order Data Management*	*Overview of Central Components*	*Problems duringImplementation*
S-2	SLO-1	*Definitions of Terms - Classification of Terms*	*General and Complete Data Model, Origins of Master Data*	*Supply Management within the MES, Demand Planning*	*Platform Independence, Scalability*	*Preparation of the Implementation Project*
	SLO-2	*Company Management Level*	*Data Model for Product Definition, Relevant Concepts*	*Interaction between the ERP Systemand the MES, Material Warehousing Costs*	*Flexible Adjustment versus Suitability for Updates*	*Analysis of the Actual Situation*
S-3	SLO-1	*Production Management Level*	*The Operation, Work Plan, Parts List*	*The Planning Process and Planning Objectives*	*MES and Service-Oriented Architecture*	*Suitable Key Figures for SuccessMonitoring*
	SLO-2	*Control/Automation Level*	*Change Management and Product History*	*Forward Planning/Reverse Planning/Bottleneck Planning*	*Database, Resource Monitoring*	*Creation of a Project Plan*
S-4	SLO-1	*Shortfalls of ExistingArchitectures andSolutions*	*Data Model for Resource Management.*	*Collision-Free Planning of a Time Container*	*Scaling the Database System*	*Selection of a Suitable System*
	SLO-2	*Patchwork, No Common Database, Excessive Response Times*	*Description of ProductionEnvironment*	*The Importance of the Control Station*	*Data Management and Archiving, Running Maintenance*	*Implementation Process, Project Management*
S-5	SLO-1	*High Operating and ManagementOutlay*	*Description of ProductionEnvironment*	*Personnel Planning and Release of Orders*	*Interfaces with Other IT Systems*	*Training Management, Operating Concept*
	SLO-2	*Demands of Future Production ManagementSystems*	*Description of ProductionEnvironment*	*General Information on Order Processing and Classification*	*Usage and Visualization, Reporting, Automated Information Distribution*	*Sensient Technologies: Emulsions*
S-6	SLO-1	*Target Management, Integration of Applications and Data*	*Production Personnel*	*Order Preparation and Setup*	*Value-Benefit Analysis,General Information on CostEffectiveness*	*Basic Quantity Units and Production Units*
	SLO-2	*Real-Time Data Management*	*Operating Resources*	*Order Control,Managing the Production Bin, Material Flow Control*	*Performance Measurement*	*Realization and Implementation*

S-7	SLO-1	*Lean Sigma and MES*	*Materials and Preliminary Products*	*Order Processing and Operating DataRecording*	*General Information on Evaluation*	*Basic Quantity Units and ProductionUnits*
	SLO-2	*Commonalities between Existing Approachesand MES*	*Information and Documents*	*Process and Quality Assurance*	*The Benefits of an MES*	*Tasks of the MES, Challenges,*
S-8	SLO-1	*Norms and Guidelines, Recommendations*	*System and Auxiliary Data*	*Performance Data*	*Integrated Data Transparency, Reducing Time Usage*	*Realization and Implementation*
	SLO-2	*Adjacent Areas, Product Lifecycle Management*	*Order Fulfillment Data and Orders*	*Maintenance Management*	*Reducing Administration Expenses,Improved Customer Service*	*The MES as a Medium of Product-Development Management*
S-9	SLO -1	*Implementation Strategies*	*Production Data, Operating Data, andMachine Data*	*Preventive Maintenance and Repair*	*Early Warning System, Real-Time CostControl*	*Standardization of Function Modules*
	SLO -2	*Points of Contact with MES*	*Derived Performance Data and Figures*	*Alarm Management*	*The Costs of an MES*	*Merging Consultancy Activities andIT Systems*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*History and Need of AM*	*Preparation of CAD Model:*	*Stereo lithography (SLA) : Introduction to SLA*	*Selective Laser Sintering (SLS): Introduction to SLS*	*Materials for AM: Metals, Biomaterials for AM*
	SLO-2	*Evolution of AM*	*Interfacing of CAD and AM , File formats used in AM*	*Basic concepts and Working Principle of SLA*	*Basic concepts and Working Principle of SLS*	*Polymers for AM*
S-2	SLO-1	*Basic concepts and working principle of AM*	*Introduction to STL File format*	*Constructional details for SLA*	*Constructional details for SLS*	*Ceramics for AM*
	SLO-2	*Additive Manufacturing vs Subtractive manufacturing*	*Problems (Errors) with STL file*	*Advantages of SLA*	*Advantages of SLS*	*Composites for AM*
S-3	SLO-1	*AM Process chain*	*.Reverse engineering: Need for Reverse engineering, Introduction to Co-ordinate Measuring machine (CMM)..*	*Limitations of SLA*	*Limitations of SLS*	*Applications of AM in Manufacturing and tooling*
	SLO-2	*AM Process chain*	*Reverse engineering: CMM measurement process – Data collection, Digitization from surface, Preprocessing, Surface fitting.*	*Applications of SLA*	*Applications of SLS*	*Applications of AM in Space*
S-4	SLO-1	*Rapid prototyping on product development*	*Rapid tooling*	*Fused deposition modelling (FDM) : Introduction to FDM*	*Laser Engineered Net Shaping (LENS): Introduction to LENS*	*Applications of AM in Automotive industry*
	SLO-2	*Rapid prototyping on product development*	*Rapid tooling*	*Basic concepts and Working Principle of FDM*	*Basic concepts and Working Principle of LENS*	*Applications of AM in Aerospace industry*
S-5	SLO-1	*Classification of AM processes*	*Design for AM: Part orientation*	*Constructional details for FDM*	*Constructional details for LENS*	*Applications of AM in Biomedical industry*
	SLO-2	*Classification of AM processes*	*Removal of supports*	*Advantages of FDM*	*Advantages of LENS*	*Applications of AM in Biomedical industry*

S-6	SLO-1	*Other Related technologies: Overview about other technologies related to AM*	*Hollowing out parts*	*Limitations of FDM*	*Limitations of LENS*	*Applications of AM in Jewellery industry*
	SLO-2	*Computer Aided Engineering (CAE)*	*Inclusion of Undercuts and other manufacturing constraints*	*Applications of FDM*	*Applications of LENS*	*Applications of AM in Various other fields.*
S-7	SLO-1	*Haptic based CAD*	*Interlocking features, Reduction of part count in assembly*	*Laminated Object Manufacturing (LOM) : Introduction to LOM*	*Electron Beam Melting (EBM): Introduction to EBM*	*Introduction to Direct digital manufacturing (DDM)*
	SLO-2	*Haptic based CAD*	*Identification markings / numbers*	*Basic concepts and Working Principle of LOM*	*Basic concepts and Working Principle of EBM*	*Rapid prototyping vs DDM*
S-8	SLO-1	*AM unique capabilities: Shape complexity, Hierarchical complexity*	*Engineering design rules for AM: Tolerances – Digital to Object*	*Constructional details for LOM*	*Constructional details for EBM*	*Future directions of AM*
	SLO-2	*AM unique capabilities: Functional complexity, Material complexity*	*Design freedom, Relative fit*	*Advantages of LOM*	*Advantages of EBM*	*Future directions of AM*
S-9	SLO-1	*Benefits of AM.*	*Flexures, Hinges, Snap fits*	*Limitations of LOM*	*Limitations of EBM*	*Digipronuership*
	SLO-2	*Limitations of AM.*	*Orientation and Clamping*	*Applications of LOM*	*Applications of EBM*	*Digipronuership*

Course Code	18MEE807T	Course Name	INDUSTRIAL ROBOTICS&MATERIAL HANDLING SYSTEMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering			Data Book/Codes/Standards	Nil

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Introduce the basic concepts, parts of robots and types of robots*
CLR-2 :	*Familiar with the various drive systems for robot, sensors and theirapplications in robots and programming of robots*
CLR-3 :	*Select the robots according to its usage*
CLR-4 :	*Know about the various applications of robots, justification and implementation of robot*
CLR-5 :	*Know about material handling in a system*
CLR-6 :	*Acquire knowledge on various material handling equipment used both in automated andnon-automated systems*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Understand the fundamentals of robot technology, sensors, drives and systems*	2	90	85	H	-	H	L	M	-	-	-	-	-	H	-	H	-	H
CLO-2 :	*Recognize the ideas about robot cell design, work cell control*	2	90	85	H	-	H	L	M	-	-	-	-	-	H	-	H	-	H
CLO-3 :	*Have knowledge about various applications of robots in material handling*	1	90	85	M	-	M	L	M	-	-	-	-	-	L	-	H	-	H
CLO-4 :	*Understand the concepts of automated material handling and its types*	2	90	85	L	-	L	L	M	-	-	-	-	-	M	-	H	-	H
CLO-5 :	*Identify the application of automated guided vehicles in material handling*	1	90	85	M	-	H	L	M	-	-	-	-	-	M	-	H	-	H
CLO-6 :	*Recognize about vehicle guidance and routing in material handling*	2	90	85	H	-	H	L	M	-	-	-	-	-	M	-	H	-	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Automation and Robotics*	*Robot cell layouts- Robot centered cell*	*General consideration in Robot Material Handling*	*Automated material handling*	*Automated Guided Vehicle Systems - Introduction*
	SLO-2	*History of Robots*	*In line Robot cell*	*Material Transfer Application*	*Hand trucks, Powered trucks*	*Introduction to Drones*
S-2	SLO-1	*Robot Anatomy*	*Mobile robot cell*	*Pick and place operations*	*Cranes monorails and Hoists*	*Driverless Trains*
	SLO-2	*Robot configurations*	*Multiple robots and machine Interface*	*Palletizing and related operations*	*Conveyors systems*	*AGVs Pallet Trucks*
S-3	SLO-1	*Robot motions, Joint Notation Scheme*	*MR- MI Example*	*Machine loading and unloading*	*Selection of material handling equipment*	*AGVs Unit load carriers*
	SLO-2	*Work volume*	*Other considerations in work cell design*	*Die casting, plastic molding*	*Principles of material handling*	*Driverless train operation*
S-4	SLO-1	*Polar, Cylindrical, Cartesian*	*Work cell control*	*Forging, Machining operations*	*Roller, stake wheel conveyor*	*Storage/ Distribution system*
	SLO-2	*Robot drive systems*	*Sequence control*	*Stamping press operations*	*Belt, chain conveyors*	*Assembly line operation*
S-5	SLO-1	*Speed of motion*	*operation interface*	*Robots in spot welding*	*Overhead trolley conveyor*	*Miscellaneous operation*
	SLO-2	*Load carrying capacity*	*Safety monitoring*	*Robots in arc welding*	*slat conveyors*	*Functions of AGV*
S-6	SLO-1	*4 types of robot control system*	*Interlocks*	*Problems for Robots in arc welding*	*In floor towline conveyor*	*Vehicle guidance and routing*
	SLO-2	*Precision of movement*	*Error detection and recovery*	*Features of the welding robot*	*Cart on track conveyor*	*Operation of on board sensor system*
S-7	SLO-1	*End effectors- types of grippers*	*Work cell controller*	*Sensors in arc welding robot*	*Other handling equipment, Dial Indexing tables*	*Frequency select, path switch select method*

	SLO-2	*Gripper selection and design*	*Robot controller*	*Vision based systems, Benefits*	*Elevators, Pipelines*	*Traffic control and safety*
S-8	SLO-1	*Transducers and sensors*	*Electro mechanical Relays, Programmable controllers*	*Robots in Spray coating*	*Containers, Highway Tractor trailers*	*On board vehicle sensing, zone blocking*
	SLO-2	*Tactile sensors*	*A computer as the work cell controller*	*Immersion and flow coating, Spray coating methods*	*Railway trains, Cargo aircraft, Ship, barges.*	*System management, On board control panel*
S-9	SLO-1	*Proximity and Range sensors*	*Robot cycle time analysis*	*Benefits of robot spray coating*	*Types of AS / RS*	*Remote call stations, Central computer control*
	SLO-2	*Uses of sensors in robotics*	*Elements in RTM*	*Other Processing operations using robots*	*Advanced ware housing robots, Applications.*	*Automotive Intelligent vehicles*

Learning Resources	1. *Mikell P Groover, Mitchell Weiss, Rogen N Nagel, Nicholas G Odrey, Ashish Dutta, Industrial Robotics Technology,Programmming, and Applications, Tata McGraw Hill Special Indian Edition, 2012.* 2. *K.Lalit Narayan, K.Mallikarjuna Rao, Computer Aided Design and Manufacturing, Prentice Hall of India, 2008.* 3. *Mikell P Groover, Mitchell Weiss, Roger N Nagel, Industrial Robotics Technology, Programming, and Applications, Tata McGraw Hill Publishers, 2008.*	4. *S.R.Deb, S.Deb, Robotics Technology & Flexible Automation, Tata McGraw-Hill Education, 2012.* 5. *James A Rehg, Introduction to Robotics in CIM system, Prentice Hall, 2002.* 6. *S.K.Saha, Introduction to Robotics, Tata McGraw Hill Publishing Company Limited, 2014.*

Learning Assessment

	Bloom's Level of Thinking	Continuous Learning Assessment (50% Weightage)								Final Examination (50% Weightage)	
		CLA – 1 (10%)		CLA – 2 (15%)		CLA – 3 (15%)		CLA – 4 (10%)#			
		Theory	Practice	Theory	Practice	Theory	Practice	Theory	Practice	Theory	Practice
Level 1	Remember Understand	40%	-	30%	-	30%	-	30%	-	30%	-
Level 2	Apply Analyze	40%	-	40%	-	40%	-	40%	-	40%	-
Level 3	Evaluate Create	20%	-	30%	-	30%	-	30%	-	30%	-
	Total	100%		100%		100%		100%		100%	

CLA – 4 can be from any combination of these: Assignments, Seminars, Tech Talks, Mini-Projects, Case-Studies, Self-Study, MOOCs, Certifications, Conf. Paper etc.,

Course Code	18MEE808T	Course Name	SUSTAINABLE GREEN MANUFACTURING	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book/Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Learn about Sustainable and Green Manufacturing Techniques*
CLR-2 :	*Aspects of Green supply chain and clean energy in manufacturing*
CLR-3 :	*Understanding the principle of green manufacturing*
CLR-4 :	*Learn about green in Manufacturing Processes*
CLR-5 :	*Introduce the concept of life cycle analysis (LCA)*
CLR-6 :	*Sustainability aspects in modern manufacturing enterprises*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand the need for green and sustainable manufacturing*	2	90	90	H	H	-	-	-	H	H	-	-	-	-	H	-	-	H
CLO-2 :	*Identification of clean energy and green supply chain in manufacturing*	2	85	80	H	-	H	H	-	H	H	-	-	-	-	H	-	-	H
CLO-3 :	*Apply the concepts green principles and industrial ecology tools*	2	85	80	H	-	M	L	-	H	H	-	-	-	-	-	-	-	H
CLO-4 :	*Identification the strategies for green manufacturing*	2	85	85	M	L	-	-	-	H	H	-	-	-		H	-	-	M
CLO-5 :	*Analyze the technologies enabling green manufacturing*	2	90	85	M	L	H	H	M	H	H	-	H	-	-	H	-	-	M
CLO-6 :	*Apply the concepts of sustainability in modern manufacturing enterprises*	2	85	70	H	H	H	H	M	H	H	-	H	-	-	H	-	-	M

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Concept of Sustainability*	*Introduction to thermodynamics analysis in manufacturing processes*	*Principle of Green Manufacturing*	*Functions and types of cutting fluids*	*Introduction to Green supply chain*
	SLO-2	*Introduction to green Manufacturing*	*Thermodynamic framework of manufacturing processes*	*Cleaner Production , Dematerialization*	*Problems related to cutting fluids*	*Green Supply Chain*
S-2	SLO-1	*Motivations for sustainable development*	*Estimation of minimum work for materials transformations*	*Closed Loop Production systems Economic and Ecological Benefits of Closed-Loop Systems*	*Dry machining*	*Issues in Green supply Chain Techniques*
	SLO-2	*Motivations for sustainable Manufacturing*	*Estimation of minimum work for materials transformations*	*Design for Disassembly, Industrial Metabolism*	*Advantages and Limitations*	*Green packaging*
S-3	SLO-1	*Productivity and sustainability*	*Estimation of minimum work for materials transformations*	*Adoption of low carbon technologies*	*Near dry machining*	*The Packaging supply chain*
	SLO-2	*Metrics for green manufacturing*	*Temperature and Pressure Changes for Open Materials-Processing Systems*	*Need to reduce the carbon footprint of manufacturing operations*	*Advantages, Disadvantages*	*Future of Green Supply Chain*
S-4	SLO-1	*Societal metrics*	*Energy use for elastic – plastic deformation*	*Life Cycle assessment*	*Minimum Quantity Lubrication systems*	*Lean Production*
	SLO-2	*Economic Metrics*	*Electric energy used in manufacturing processes*	*Life cycle assessment elements*	*Economics of Environmentally Friendly Machining*	*Types of wastes*
S-5	SLO-1	*Environmental metrics*	*Resource accounting*	*Life cycle assessment procedure*	*Development of Environmentally Friendly cutting fluids, cutting tools and machine tools*	*Lean Manufacturing Techniques*
	SLO-2	*Barriers to Green Manufacturing*	*Introduction to Clean Energy Technologies*	*Life Cycle Assessment (LCA) of Machine tools*	*Enabling Technologies for Green Manufacturing*	*Agile Manufacturing*

S-6	SLO-1	*Advantages and Limitations of Green manufacturing*	*Solar Photovoltaic*	*Design for Environment*	*Sustainable solutions*	*Components of the agile manufacturing system/enterprise*
	SLO-2	*Environmental Impact of Manufacturing*	*Wind Energy*	*Product life extension and the service economy*	*Adoptrontics in Machine tools*	*Comparison between agile and traditional manufacturing enterprises*
S-7	SLO-1	*Standards for green manufacturing*	*Fuel cells*	*Eco Labelling, Industrial Ecology tools*	*Reconfigurable Machine tools*	*Analysis of Manufacturing Firms for Agility*
	SLO-2	*ISO 14000*	*Comparison of lean Energy Technologies*	*Case studies in Industrial Ecology*	*Process Monitoring System*	*Remanufacturing*
S-8	SLO-1	*OHSAS 18000*	*Application Potentials of clean energy supply in green manufacturing*	*Case studies in Industrial Ecology*	*Smart building blocks*	*Recycling*
	SLO-2	*Sustainability rating schemes*	*Cost benefit of environmental emission mitigation through clean energy supply*	*How is Industrial Ecology Viewed by Industry*	*Add-ons for machine tool upgrade*	*Materials for sustainability and recycling*
S-9	SLO-1	*Strategies for Green Manufacturing*	*Technological Performance of clean Energy Supply.*	*Awareness of Industrial Ecology and its components*	*Applying Sensor Flows in Decision Making (Automated Manufacturing) Manufacturing Complexity*	*Sustainability Assessments of Competitive Manufacturing Strategies*
	SLO-2	*Strategies for Green Manufacturing*	*Energy efficient manufacturing processes*	*Case studies of product improvement and redesign*	*Environmental implications of nano manufacturing and Semiconductor manufacturing*	*Sustainability Assessment for Industrial Estates*

Course Code	18MEE809J	Course Name	DATABASE MANAGEMENT SYSTEM	Course Category	E	Professional Elective	L	T	P	C
							2	0	2	3

Pre-requisite Course	Nil	Co-requisite Course	Nil	Progressive Courses	Nil
Course Offering Department	Mechanical Engineering	Data Book/Codes/ Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*To impart an introduction to the theory and practice of database systems*
CLR-2 :	*To learn various database models and query language.*
CLR-3 :	*To understand effective manipulation of memory space for database files.*
CLR-4 :	*To understand the normalization in building effective database table*
CLR-5 :	*To protect the data and database from foreign access*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Develop the terminology and features in database*	2	90	85	H	M	-	M	-	-	-	-	M	H	-	M	-	-	-
CLO-2 :	*Analyze the information of storage details*	2	90	85	H	L	-	-	-	-	-	-	-	H	-	L	-	-	-
CLO-3 :	*Transform an information into relational database*	2	90	85	H	M	M	M	-	-	-	-	M	H	-	H	-	-	-
CLO-4 :	*Ability to work in data manipulation*	2	90	85	H	L	-	-	-	-	-	-	M	L	-	L	-	-	-
CLO-5 :	*Analyze the Client/Server and Internet Database Environment*	2	90	85	H	M	-	L	-	-	-	-	-	H	-	M	-	-	-
CLO-6 :	*Write queries for design and manipulation of database table using MySQL or Oracle*	2	90	85	H	H	M	M	M	-	-	-	M	H	-	H	-	-	-

Duration (hour)		12	12	12	12	12
S-1	SLO-1	*Introduction to database Systems*	*Entity types*	*Relational Model*	*Structured Query Language (SQL)*	*Introduction to parallel database*
	SLO-2	*History of DBMS applications*	*Entity sets*	*Structural of database*	*SQL Data definition*	*I/O Parallelism*
S-2	SLO-1	*File System versus a DBMS*	*Attributes and Keys*	*Structure of relational Databases*	*Queries on Single Relation*	*Lab 13: Simple PL/SQL Programs, Use of Exceptions, Cursor, Procedure, Function, Trigger, Sequence*
	SLO-2	*Database Language*	*Basic building blocks*	*Keys, Schema Diagram*	*Queries on multiple Relations*	
S-3	SLO-1	*Lab 1: Creating database table*	*Levels of data abstraction*	*Relational Algebra*	*Overview of SQL*	*Security :Database security – Granting,Removing*
	SLO-2		*Physical Schemas and Conceptual Schemas*	*Relational Algebra - Set Operation, Renaming,*	*Basic structure of SQL Queries*	*Type of Security*
S-4	SLO-1	*Lab 2: DDL Commands*	*Overview ofEntity-Relationship (E-R) Model*	*Relational Algebra - Joins*	*Lab 9:Simple queries*	*Control measures*
	SLO-2		*Relationship set, Entity set*	*Relational Algebra - Division*		*Database Recovery*
S-5	SLO-1	*Database Interface*	*Database design and Entity-Relationship(ER) Model, Design alternatives*	*Lab 7: Joining tables*	*Lab 10: Nested queries*	*Storage, Data access*
	SLO-2	*Form based Interface, Graphical based Interface*	*Constraints, Entity-Relationship (ER)-Diagrams, Roles and Structural Constraints*			*Buffer Management*
S-6	SLO-1	*Database Environment*	*Lab 4: Basic SELECT statements*	*Relational Algebra - Division*	*Data definition commands, DML Commands, Set operations*	*Database – Backup*
	SLO-2	*Database Component Modules*		*Extended Relational Algebra Operations*	*Aggregate functions*	*Recovery Algorithm*
S-7	SLO-1	*Database System utilities*	*Lab 5: Advanced SELECT statements*	*Views*	*Lab 11:Creation, Insertion, Updating, Deletion ofViews operation*	*Lab 14: DBMS for CAD software design*
	SLO-2	*Database System Architecture*		*Functional Dependency*		

S-8	SLO-1	*Lab 3: Data Manipulation Commands*	*Entity-Relationship(ER) Design Issues*	*Various process in designing a Database*	*Aggregate functions - Basic aggregation*	*Emerging Database technology - Mobile database*
	SLO-2		*E-R Model and Enhanced entity-relationship (EER) Model*	*Lab 8: Basic SQL functions*	*Aggregate functions- Aggregation with Grouping*	*Emerging Database technology - Multimedia database*
S-9	SLO-1	*Data Independence*	*Enhanced entity-relationship (EER) Model*		*Lab 12: Basics of PL/SQL*	*Access controls*
	SLO-2	*Data Mappings*	*Enhanced entity-relationship(EER)-Specialization*	*Normalization using functional dependencies*		*Security for internet applications*
S-10	SLO-1	*Structure of DBMS*	*Enhanced entity-relationship(EER)-Generalization*	*Decomposition*	*Null values, Joins, Nested queries*	*Web Technology in Smart Manufacturing*
	SLO-2	*Security and Authorization,*	*Enhanced entity-relationship(EER)-Attribute Inheritance*	*Boyce-Codd Normal Form*	*Client/Server Database Environment*	*Web Technology in Smart Manufacturing*
S-11	SLO-1	*Database Turning*	*Constrain on Generalization*	*DBMS application in Computer Integrated manufacturing*	*Basics of Ontology Language and its applications.*	*DBMS for computer integrated manufacturing*
	SLO-2	*Data Models*	*Aggregation*	*3NF, Correctness of the 3NF Algorithm*	*Design Challenges in SPARQL,*	*Material Handling System Design*
S12	SLO-1	*Types of DBMS*	*Lab 6: Constraints in Tables*	*Comparison of BCNF and 3NF*	*SPARQL Query Forms,*	*Lab 15:Report Generation for Material Handling System Design*
	SLO-2	*Objective data model and Hierarchical data model*		*Normalization using multivalued dependencies*	*SPARQL Graph Patterns*

ACADEMIC CURRICULA

Professional Elective Courses

MECHATRONICS ENGINEERING

Regulations - 2018

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

(Deemed to be University u/s 3 of UGC Act, 1956)

Kattankulathur, Kancheepuram, Tamil Nadu, India

Course Code	18MHE401T	Course Name	ELEMENTS OF MECHATRONICS SYSTEMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards			Nil

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Identify the key elements of mechatronics system and the design issues*
CLR-2 :	*Identify the different types of sensors used in mechatronics system*
CLR-3 :	*Identify the different types of actuators used in mechatronics system*
CLR-4 :	*Identify the different types of controllers used in mechatronics system*
CLR-5 :	*Identify the mechatronics system applied for different applications*
CLR-6 :	*Utilize the elements of mechatronics systemsfor different applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Analyze the various elements of mechatronics system*	1	85	80	H	L	-	H	M	-	L	L	M	-	-	-	M	-	-
CLO-2 :	*Analyze the different types of sensor for developing a mechatronics system*	2	85	80	H	H	-	H	M	-	L	L	M	-	-	-	-	-	-
CLO-3 :	*Analyze the different types of actuators for developing a mechatronics system*	2	85	80	H	H	-	H	M	-	L	L	M	-	-	-	-	-	-
CLO-4 :	*Analyze the different types of controllers for developing a mechatronics system*	2	85	80	H	H	-	H	M	-	L	L	M	-	-	-	-	-	-
CLO-5 :	*Apply the mechatronics elements in to various applications*	2	85	80	H	H	-	H	M	-	L	L	M	-	-	-	-	-	-
CLO-6 :	*Apply the sensors and actuators for developing a mechatronics system*	2	85	80	H	H	-	H	M	-	L	L	M	-	-	-	-	-	-

		Introduction to Mechatronics Systems	Sensors	Actuation System	Controllers	Applications of Mechatronics Systems
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to mechatronics system*	*Sensor characteristics*	*Introduction to electrical ,mechanical, hydraulic and pneumatic actuation system*	*Proportional, Integral controller*	*Car park barriers using PLC.*
	SLO-2	*Definition of mechatronics: Concurrent and sequential integration*	*Signal conditioning system*	*Solid state switches*	*Derivative and PID controller*	*Bar code reader*
S-2	SLO-1	*The Design process*	*Resistive sensors*	*Construction and operation of solenoids*	*Example: Boiler control using PID*	*Coin counting machine*
	SLO-2	*Mechatronics design elements*	*Types and working principle*	*Relay Construction, working principle, Types and applications.*	*Introduction to Micro controller*	*Conveyor based material handling system*
S-3	SLO-1	*Measurement system*	*Capacitive sensors*	*DC motor: Construction and principle of operation*	*Architecture of M68HC11 microcontroller*	*Computer controlled CNC drilling machine*
	SLO-2	*Actuation system*	*Types and working principle*	*AC motor: construction and principle of operation*	*Architecture of ATMEGA328 microcontroller*	*Computer controlled CNC drilling machine*
S-4	SLO-1	*Control system*	*Inductive transducers*	*Stepper motors: Construction and principle of operation*	*Signal processing, Multiplexer and Demultiplexer*	*Electronic car engine management system*
	SLO-2	*Control system*	*Types and working principle*	*Types of stepper motor*	*Dataacquisition system*	*Solenoid operated fuel injector: construction and operation*
S-5	SLO-1	*Introduction to microprocessor based controllers*	*Temperature sensors*	*Servo motors: Construction, principle of operation*	*Types: A/D converters*	*Electronic control of steering system*
	SLO-2	*Intelligent control*	*Types and working principle*	*Types of servo motor*	*Types: D/A converters*	*Autonomous guided vehicle (AGV)*
S-6	SLO-1	*System integration*	*Pressure sensors*	*Construction and operation of Synchronous motor*	*Basic structure, Programming units and Memory ofProgrammable logic controller*	*Automatic vehicle transmission system*

	SLO-2	*Integrated design issues in mechatronics*	*Types and working principle*	*Construction and operation of BLDC motor*	*Input and Output Modules, Mnemonics for programming*	*Wind screen wiper using stepper motor control*
S-7	SLO-1	*Hardware in loop simulation*	*Nano sensor Parameters and characteristics. Necessity of Nano scale measurements*	*Construction and operation of PMDC motor*	*Timers*	*Pneumatic controlled three axis Pick and place robot*
	SLO-2	*Shaft speed control*	*Magneto resistance Nano sensor, Hall effect Nano sensor*	*Pressure control valve*	*Counters and Shift Registers*	*Obstacle avoidance robot*
S-8	SLO-1	*Water level controller*	*NEMS accelerometer*	*Rotary actuators and cylinders*	*Latching and Internal relays*	*Self-balancing robot*
	SLO-2	*Open loop and closed loop temperature control system*	*Silicon nanowire accelerometer*	*Hydraulic and pneumatic systems with example*	*Master relay and Jump Controls*	*Actuation of robotic gripper using SMA wire*
S-9	SLO-1	*Washing machine control*	*Optical displacement Nano sensor, Magneto motive displacement Nano sensor*	*Mechanical actuation system :Types of motion*	*Programming the PLC using Ladder diagram for Simpleapplications*	*Nano mechanical cantilever based manipulation for sensing and imaging.*
	SLO-2	*Digital camera control*	*Piezoresistive and Piezoelectric displacement Nano sensor*	*Kinematic chains, Cams actuation with example, Gear trains with example*	*Programming the PLC using Ladder diagram for Simpleapplications*	*Swam of self-organized nano Robots.*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department		Mechatronics Engineering	Data Book / Codes/Standards	Nil	

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Introduce the various architecture of industrial robot*
CLR-2 :	*Introduce the vector transformation applied to robotics*
CLR-3 :	*Introduce the forward and inverse kinematics applied to serial manipulator robot*
CLR-4 :	*Emphasize on the various actuators and transmission element used in robot. Also to define various control strategy used in manipulator robotics*
CLR-5 :	*Introduce the formulation of various trajectories*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Understand the architecture and basic technical terms used in robotics*	2	80	70	H	M	M	H	M	-	-	-	-	-	-	H	H	-	-
CLO-2 :	*Learn the application of vector transformation in robotics*	2	80	70	H	H	M	H	M	-	-	-	-	-	-	H	H	-	-
CLO-3 :	*Learn to compute the forward and inverse kinematics model for various configuration of serial manipulator*	2	80	70	H	H	M	H	M	-	-	-	H	-	-	H	H	-	-
CLO-4 :	*Understand the various actuators and transmission elements used in robot. Also will learn the various control and trajectory planning algorithm*	2	80	70	H	H	H	H	M	-	-	-	M	-	-	H	H	-	-
CLO-5 :	*Understand the trajectory planning techniques and various industrial workcell*	2	80	70	H	H	M	H	M	-	-	-	M	-	-	H	H	-	-

		Introduction to Robotics	Transformations	Manipulator Kinematics	Introduction to sensors and actuators in robotics	Trajectory planning and work cell
Duration (hour)		7	12	8	9	9
S-1	SLO-1	*Definition of Robot, Laws of Robotics,*	*Description of point in space*	*Introduction to Manipulator Kinematics*	*Basic actuators and transmission elements*	*Introduction-Trajectory Planning.*
	SLO-2	*Basic terminologies used in robotics*	*Description of body in space*	*Forward Kinematics*	*Mathematical model of DC motor*	*Approach and importance of trajectory planning*
S-2	SLO-1	*Classification based on application*	*Review of Vectors*	*Forward Kinematics of RR planar manipulator- geometric approach*	*Harmonic Drives*	*Joint space and Cartesian space planning*
	SLO-2	*Classification based on work volume*	*Vector representation of points and bodies*	*Numerical*	*Computation of reduction ratio of harmonic drive and its advantage*	*Difference with an example*
S-3	SLO-1	*Definition – precision, repeatability and accuracy*	*Translation- Numerical*	*DH formulation*	*Force sensor and its uses*	*Cubic Polynomial trajectory planning*
	SLO-2	*Co-ordinate systems used in robotics, Degree of freedom with examples*	*Rotation-Numerical*	*Difference between modified and standard DH convention with example of RR planar manipulator*	*Maltese cross configuration*	*Problem on Cubic Polynomial trajectory planning*
S-4	SLO-1	*Links and various joints in robotics*	*Representing Rotation- Rotation Matrix*	*Forward kinematics of 3R spatial articulated arm*	*Importance of force control using force sensor*	*Case study on trajectory planning for manipulator robot*
	SLO-2	*Anatomy of Robot*	*Properties of Rotation matrix*	*Derivation of final DH matrix for 3R spatial articulated arm*	*Case study – Application of force sensor*	*Case study on trajectory planning for manipulator robot*
S-5	SLO-1	*RPY wrist*	*Numerical on rotation matrix*	*Forward kinematics of RPY wrist*	*Tactile sensor*	*Robot work cell layout*
	SLO-2	*Configuration space and operational space*	*Numerical on rotation matrix*	*Derivation of final DH matrix for RPY wrist*	*Various Tactile sensors- principle and working*	*Classification of robot work cell*
S-6	SLO-1	*Robot data sheet interpretation*	*Representing Rotation- Euler angles*	*Forward kinematics of 4 DOF SCARA robot*	*Slip Sensor*	*Multiple robot*
	SLO-2	*Important terms and finding in datasheet of manufacturer*	*Numerical*	*Derivation of final DH matrix for 4 DOF SCARA robot*	*Slip Sensor*	*Work cell control*

S-7	SLO-1	*Robot End effector*	*Representing Rotation- Equivalent axis representation*	*Introduction to Inverse kinematics*	*Application of tactile and slip sensor*	*Safety monitoring*
	SLO-2	*Types of gripper*	*Numerical*	*Inverse Kinematics of RR planar manipulator- Geometric approach*	*Case Study*	*Error detection and recovery*
S-8	SLO-1		*Difference between Current axis and fixed axis representation*	*Issues in Inverse Kinematics*	*Vision system for robot*	*Robot Cycle time analysis*
	SLO-2		*Numerical*	*Issues in Inverse Kinematics*	*Vision architecture block diagram*	*Economic analysis of robot*
S-9	SLO-1		*Homogenous Transformation*		*Case study on Vision based control*	*Criteria for selection of robot work cell*
	SLO-2		*Numerical*		*Case study on Vision based control*	*Case Study- Selection of robot based on application*
S-10	SLO-1		*Operators and Mapping Concept*			
	SLO-2		*Case Study- Numerical*			
S-11	SLO-1		*Compound Transformation*			
	SLO-2		*Case Study*			
S-12	SLO-1		*Case study of transformations in robotics*			
	SLO-2		*Case study of transformations in robotics*

		Industrial Automation	Process Control	Controlling of Actuators	Programmable Logic Controllers	Distributed Control Systems
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Evolution of instrumentation and control.*	*Introduction of Process control*	*Need of Machine tools control*	*Introduction of sequence Control*	*Introduction to Distributed Control Systems*
	SLO-2	*Need of instrumentation and control.*	*Need of Process control*	*Need of Machine tools control*	*Need of sequence Control*	*Need of Distributed Control Systems*
S-2	SLO-1	*Need of automation in industry*	*Basics of P I D control*	*Need of CNC Machines*	*Need of Programmable Logic Controllers*	*Concept of Distributed Control Systems*
	SLO-2	*Role of automation in industry*	*Implementation of PID controllers*	*Components of CNC Machines*	*Need of Programmable Logic Controllers*	*Components of Distributed Control Systems*
S-3	SLO-1	*Components of industrial automation systems*	*Need for controller tuning*	*Analysis of a control loop*	*Concepts of Relay Ladder Logic*	*Functions of DCS*
	SLO-2	*Architecture of industrial automation systems*	*Steps in controller tuning*	*Analysis of a control loop*	*Need of Relay Ladder Logic*	*Advantages and limitations of DCS*
S-4	SLO-1	*Need for sensors*	*Need of digital controllers*	*Adjustable field drives*	*Scan cycle*	*DCS as an automation tool*
	SLO-2	*Need for measurement systems*	*Significance of digital controllers*	*DC motor drive*	*RLL Syntax*	*Enterprise Resource Planning by DCS*
S-5	SLO-1	*Pressure measurement*	*Principles of predictive control*	*Need of variable frequency control*	*Analog control using PLC*	*Schematic block diagram of DCS*
	SLO-2	*Force measurement*	*Principles of predictive control*	*Variable frequency control of induction motor drive*	*Analog control using PLC*	*Schematic block diagram of DCS*
S-6	SLO-1	*Need of temperature measurement*	*Control of systems with inverse response*	*Need of closed loop control*	*Advanced RLL programming*	*Need of date acquisition*
	SLO-2	*Thermocouple and Thermistor*	*Control of systems with inverse response*	*Closed loop synchronous motor drive*	*Advanced RLL programming*	*Concepts of data acquisition*
S-7	SLO-1	*Displacement measurement*	*Special control structures*	*Need of proportional valve in fluid power systems*	*PLC interfacing to SCADA/DCS using Communications links*	*Specifications involved in DCS*
	SLO-2	*Speed measurement*	*Concepts of cascade control*	*Implementation of proportional valve in fluid power systems*	*PLC interfacing to SCADA/DCS using Communications links*	*Specifications involved in DCS*
S-8	SLO-1	*Measurement of level*	*Introduction of automation tools*	*Need of proportional valve in fluid power systems*	*Need for industrial Ethernet*	*Latest trends in DCS*

	SLO-2	*Measurement of humidity and pH*	*PLC and DCS*	*Implementation of proportional valve in fluid power systems*	*Implementation of industrial Ethernet*	*Latest developments in DCS*
S-9	SLO-1	*Need for Signal Conditioning*	*SCADA*	*PID based pneumatic controllers for positioning*	*Advanced applications of PLC*	*SCADA specifications for different real time applications*
	SLO-2	*Need for Signal processing*	*Hybrid DCS/PLC*	*PID based pneumatic controllers for positioning*	*Advanced applications of PLC*	*SCADA specifications for different real time applications*

CLO-3 :	*Compare the different types of database systems and utilize the most appropriate one for a given manufacturing industry*	2	90	85	H	M	-	H	-	-	-	-	L	-	-	-	-	L	L
CLO-4 :	*Identify the suitable database design and architecture for a given manufacturing industry*	2	90	85	H	M	-	H	-	-	-	-	L	-	-	-	-	L	L
CLO-5 :	*Select the rational computerized manufacturing system for the products*	2	90	85	H	H	-	H	-	-	-	-	L	-	-	-	-	L	L
CLO-6 :	*Chose the rational computer based production management system for production data control, customer order servicing and plant control*	2	90	85	H	H	-	H	-	-	-	-	L	-	-	-	-	L	L

Duration (hour)		INTRODUCTION	DATA PROCESSING	DATA HANDLING	DATA FORM	NEED OF COMPUTER IN MANUFACTURING
		9	9	9	9	9
S-1	SLO-1	*Need for manufacturing*	*Introduction to data base system*	*Introduction to relational database.*	*Basic QBE and multiple relations*	*Parts oriented production information system concept*
	SLO-2	*Need for manufacturing*	*Need for database system*	*Introduction to relational database.*	*Basic QBE and multiple relations*	*Parts oriented production information system concept*
S-2	SLO-1	*Macroscopic view of manufacturing organization*	*Need for database system*	*Integrity constraints over relations*	*Aggregates, condition box, data base design: Schema refinement*	*Parts oriented production information system structure*
	SLO-2	*Macroscopic view of manufacturing organization*	*Benefits of database approach*	*Integrity constraints over relations*	*Aggregates, condition box, data base design: Schema refinement*	*Parts oriented production information system structure*
S-3	SLO-1	*Principal properties of manufacturing information: MRP I*	*Data and data models*	*Enforcing integrity constraint*	*Functional dependencies and reasoning*	*Computerized production scheduling*
	SLO-2	*Principal properties of manufacturing information: MRP II*	*Data and data models*	*Enforcing integrity constraint*	*Functional dependencies and reasoning*	*Computerized production scheduling*
S-4	SLO-1	*Principal properties of manufacturing information: SFC*	*Entity and relationship diagram*	*Querying relational data*	*Trivial and non-trivial dependencies.*	*Online production control system*
	SLO-2	*Principal properties of manufacturing information: MPS*	*Diagram, database design with E/R model*	*Logical database design.*	*Trivial and non-trivial dependencies.*	*Online production control system*
S-5	SLO-1	*Information principles of manufacturing*	*Data independence and stored fields*	*Translating ER model to relational model.*	*Closure of a set of dependencies and attributes.*	*Computer based production management system: Engineering and production data control*
	SLO-2	*Information principles of manufacturing*	*Records and files.*	*Translating ER model to relational model*	*Closure of a set of dependencies and attributes.*	*Computer based production management system: Engineering and production data control*
S-6	SLO-1	*Measurement of manufacturing information*	*Three levels of architecture: External*	*Relational algebra and queries*	*Normal forms and normalization: First form*	*Computer based production management system: Customer order servicing*

	SLO-2	*Information physics, Communication approach*	*Three levels of architecture: Internal and conceptual.*	*Syntax and semantics*	*Normal forms and normalization: Second form*	*Computer based production management system: Customer order servicing*
S-7	SLO-1	*Synthesis of manufacturing information*	*Mappings*	*Form of basic SQL query*	*Normal forms and normalization: Third form*	*Computer based production management system: Forecasting*
	SLO-2	*Information intensity and value matrices*	*DBMS functions and components*	*Form of basic SQL query*	*Normal forms and normalization: Third normal form*	*Computer based production management system: Plant maintenance and control*
S-8	SLO-1	*Dual nature of manufacturing information*	*Data Communication*	*Union, intersect and except*	*Multi valued dependency and fourth normal form*	*Computerized manufacturing information system, case study*
	SLO-2	*Performance maximization rules*	*Data Communication*	*Nested queries*	*Multi valued dependency and fourth normal form*	*Computerized manufacturing information system, case study*
S-9	SLO-1	*Materialization of manufacturing information*	*Distributed processing*	*Aggregate queries and null values*	*Join dependencies and fifth normal form*	*Computerized manufacturing information system, case study*
	SLO-2	*Materialization of manufacturing information*	*Distributed processing*	*Triggers and active databases*	*Join dependencies and fifth normal form*	*Computerized manufacturing information system, case study*

Course Code	18MHE406T	Course Name	INDUSTRIAL ELECTRONICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MHC103T, 18MHC204T	Co-requisite Courses	NIL	Progressive Courses	NIL
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	NIL		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Identify different Regulators and utilize them in different Regulated Power supply circuits*
CLR-2 :	*Recognizes the concept of heating and welding.*
CLR-3 :	*Identify working principle of different speed control methods for DC and AC motor.*
CLR-4 :	*Apply Power semiconductor switching devices concept in industrial applications.*
CLR-5 :	*Identify the principle of chopper to drive servo motors*
CLR-6 :	*Gain knowledge on regulators for regulated power supplies, Power Semiconductor devices for industrial applications, operate DC and AC drives using converters.*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Analyze various regulators used in Power supplies*	3	75	70	H	L	M	H	M	-	L	L	M	M	-	H	-	-	-
CLO-2 :	*Interpret the working principle of heating and welding in order to apply the advanced controls to improve their knowledge in understanding the concept of heating and welding.*	3	75	70	H	M	M	H	H	-	M	L	H	M	-	H	-	-	-
CLO-3 :	*Explore themselves familiar with functions of several industrial motor controls.*	3	75	70	H	L	M	H	M	-	L	L	M	M	-	H	-	-	-
CLO-4 :	*Operate various industrial appliances using Power semiconductor switching devices*	3	75	70	H	-	L	H	M	-	H	L	M	M	-	H	-	-	-
CLO-5 :	*Operate UPS and servo motors using Choppers*	3	75	70	H	-	L	H	M	-	M	L	M	M	-	H	-	-	-
CLO-6 :	*Identify power semiconductor devices, regulators, choppers, heating and welding, speed control methods for operating electric drives.*	3	75	70	H	L	M	H	M	-	L	L	M	M	-	H	-	-	-

		Introduction to Regulators and Power Supplies	Heating and Welding Control	Industrial Motor Control	Industrial Application of Power Switching Devices	AC Power Conditioner
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Concept of regulation, block diagram of a regulated power supply*	*Electronic control of heating: Introduction, Types*	*Method of controlling speed of DC motor*	*Principle of operation of automatic battery charger using SCR*	*Power supply noise*
	SLO-2	*Significance of regulated power supply.*	*Electronic control of heating: Resistance heating principle, Induction heating*	*Basic control circuit: DC motor control*	*Working of automatic battery charger using SCR*	*Different forms of noise.*
S-2	SLO-1	*Performance parameters: Major specifications of a regulated power supply, line and load regulation, output ripple and transients.*	*Induction heating: Principle of operation*	*Speed control of DC motors: Types*	*Principle of operation of emergency light using SCR.*	*Servo system: Fundamentals of Servo motor*
	SLO-2	*Concepts of fold back limiting, short circuit and overload protection.*	*Electronic control of heating: effects of supply frequency and source voltage, choice of frequency,*	*Speed control of small DC motors-operating principle*	*Working of emergency light using SCR.*	*Servo system: Principle of Servo motor*
S-3	SLO-1	*Principle of series regulators*	*Electronic control of heating: advantages and applications*	*Solid state motor control: Speed control of DC shunt motor using thyristor technology.*	*Principle of operation of Time delay relay circuit*	*Principle of buck-boost control of a servo controlled voltage stabilizer*
	SLO-2	*Types of Series regulators*	*High frequency induction heating: Fundamentals, Operation*	*Speed control of DC shunt motor using thyristor technology.*	*Working of Time delay relay circuit*	*Working of buck-boost control of a servo controlled voltage stabilizer*
S-4	SLO-1	*Principles of shunt regulators: Types*	*High frequency induction heating: Types*	*PLL control of a DC motor control*	*Automatic temperature control circuit.*	*Servo-controlled voltage stabilizer, Constructional features*
	SLO-2	*Types of shunt regulators*	*Electronic heaters employed for induction heating.*	*Over-voltage and Over load protection of DC motors.*	*Automatic temperature control circuit: types.*	*Servo-controlled voltage stabilizer: Principle of operation*
S-5	SLO-1	*Three terminal voltage regulator ICs: Positive, negative and variable applications.*	*Operation of Electronic heaters employed for induction heating.*	*AC motor control: Methods*	*Battery operated inverter circuit using power transistor*	*Ferro-resonant AC regulator- Synchro: Constructional features*
	SLO-2	*Three terminal voltage regulator ICs: negative and variable applications.*	*Thyristorised supplies used in induction furnaces*	*Speed control of three phase induction motor*	*Illumination control using SCR*	*Ferro-resonant AC regulator- Synchro: Principle of operation*

S-6	SLO-1	*Switched Mode Power Supply: Basic working principles*	*Dielectric heating: Working principle*	*Speed control of single phase induction motor.*	*Illumination control using DIAC.*	*UPS- Introduction, Types*
	SLO-2	*Switched Mode Power Supply: applications, advantages and disadvantages.*	*Dielectric heating: Advantages and disadvantages, Applications*	*Speed control of single phase induction motor.*	*Illumination control using TRIAC.*	*UPS - Principle of operation Online UPS*
S-7	SLO-1	*Concept of floating and grounded power supplies*	*Electronic control of welding, electric welding*	*TRIAC as a starter for single phase induction motors and universal series motor.*	*Electronic timers: Introduction*	*UPS - Principle of operation Offline UPS*
	SLO-2	*Concept of floating and grounded power supplies: interconnections to obtain multiple output supplies.*	*Classification of resistance welding.*	*Operation of TRIAC as a starter for single phase induction motors and universal series motor.*	*Advantages of Electronic timers*	*Advantages and Applications of UPS, Comparison of different types of UPS*
S-8	SLO-1	*Switch Mode Power Supply: Fly back converter.*	*Control circuit for resistance welding*	*Applications of AC line voltage controllers circuit.*	*Electronic timers: Sequential timer.*	*Principle of operation of choppers: Types*
	SLO-2	*Switch Mode Power Supply: forward/buck converter*	*Operation of Control circuit for resistance welding*	*Zero voltage switching circuit.*	*Digital timer*	*Principle of operation of step up chopper.*
S-9	SLO-1	*Switch Mode Power Supply: Boost converter and buck-boost converter*	*AC resistance heating.*	*Synchronous tap changer circuit.*	*Electronic time delay circuits.*	*Principle of operation of step down chopper.*
	SLO-2	*Switch Mode Power Supply: cuk converter.*	*Operation and circuit of AC resistance heating*	*AC power control of a lamp dimmer circuit.*	*Electronic time delay circuits: Advantages, Applications.*	*Principle of operation of reversible chopper.*

Duration (hour)		Fundamentals of Computer Graphics	Geometric Modelling	Visual Realism	Assembly and Tolerance	Graphics Standards
		10	10	08	09	08
S-1	SLO-1	Design as a process, sequential and concurrent engineering.	Introduction to geometric modelling	Hidden line removal: Visibility of object views	Assembly modelling: Introduction, Part modelling.	Computer graphics: Introduction
	SLO-2	Computer Aided Design (CAD) and its architecture.	Wire frame modelling: Introduction	Visibility of object techniques	Assembly modeling: Representation Hierarchical relationship & Mating Condition.	Computer graphics: software and Database CAD Graphics
S-2	SLO-1	Computer graphics, co-ordinate system	Model, entities of wire frame modelling.	Visibility of object techniques: Sorting & Coherence	Assembly modeling: Types of Approach	Translator: Types
	SLO-2	Transformation types: Two and three dimensional.	Representation of synthetic curves: Hermite curve	Visibility of object technique: Priority and area orientation	Interferences of positions	Software standards: Graphical Kernel System (GKS)
S-3	SLO-1	Transformation in 2D and 3D: Translational, scaling.	Bezier curve.	Hidden surface removal: Back face, Scan line Algorithm	Tolerance: Introduction, need& concept of conventional.	Exchange Database : IGES
	SLO-2	Problems in translational scaling.	Problems on Bezier Curve	Hidden surface removal: Z-buffer Algorithm	Fits and Limits: MMC , LMC	Exchange Database :STEP
S-4	SLO-1	Transformation in 2D and 3D: Rotation, reflection	B-spline curves	Warnock's algorithm	Tolerance: Modelling Accumulation, Drafting and Manufacturing	Drawing Exchange Format & ACIS
	SLO-2	Problems in Rotation, reflection	Problems on B – Spline curve	Hidden solid removal: Ray-tracing algorithm.	Geometric tolerance: Representation and Types	Graphics Functions: Output Primitives
S-5	SLO-1	Two dimensional transformations: Problems on rotation,	rational curves	Shading: Model, surface	Tolerance analysis: Worst- case arithmetic method	Line attributes: types width , color
	SLO-2	2D Problems on scaling	Surface modelling: Introduction, model.	Shading: Enhancement, solid.	Tolerance analysis: Worst- case statistical method	Curve attributes :Color , table & Grayscale levels
S-6	SLO-1	2D Problems on translation,	Parametric representation of analytic surface.	Shading: solid	Tolerance analysis: Worst- case arithmetic method problems	Area Fill Attributes : Style, pattern, soft
	SLO-2	2D Problems on, reflection.	Plane surface	Coloring: Models	Tolerance analysis: Worst- case statistical method problems	Character Attributes: Text ,Marker

S-7	SLO-1	*Three dimensional transformations: Problems on rotation,*	*ruled surface*	*Coloring: Types*	*Monte Carlo simulation method*	*Processors : Design and Implementation*
	SLO-2	*3D Problems on scaling,*	*Parametric representation of synthetic surface: Coons and*	*Animation: Conventional, Computer & Engineering*	*Mass property calculations: First and second Moment of inertia*	*Processors :Error handling , testing and verification,*
S-8	SLO-1	*3D problems on translation*	*Parametric representation of Synthetic curve : Bicubic*	*Animation Types and Techniques*	*Mass property calculations: second Moment of inertia*	*Open Graphics Library (OpenGL): Introduction*
	SLO-2	*3D problems on reflection*	*Parametric representation of Bezier curve*	*Morphing: Types and model*	*Geometrical property: Curve Length, Surface Area*	*Open Graphics Library (OpenGL) : Types*
S-9	SLO-1	*Homogeneous co-ordinates.*	*Parametric representation of B Spline curve*		*Geometrical property: Volume: & Cross section Area*	*Communication standards for CAD systems*
	SLO-2	*Algorithms: Line, circle*	*Solid modelling: Introduction, models, entities*		*Properties of composites, mass property calculation by using CAD systems*	
S-10	SLO-1	*Clipping algorithm.*	*Solid modelling representation: Boundary representation.*			
	SLO-2	*Windowing and viewing.*	*constructive solid geometry.*

		Introduction to MEMS & Microsystem Fabrication Processes	Mechanical and Electrical Conceptions	Sensing and Actuation-I (Electrical and Thermal)	Sensing and Actuation-II (Piezoelectric and Magnetic)	Mems Case studies
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Overview of MEMS,*	*Review of Semiconductor*	*Electrostatic sensors and actuators*	*Piezoresistivity gauge factor*	*MEMS inertial sensor in automobile airbag deployment*
	SLO-2	*Elements of MEMS, Applications*	*Carrier concentration in Silicon semiconductors*	*Parallel plate capacitors*	*Piezoresistive materials*	*MEMS vibratory gyroscope*
S-2	SLO-1	*Intrinsic characteristics of MEMS, Multidisciplinary nature of microsystem design and Manufacture*	*Calculation of Conductivity and resistivity of semiconductor Electron mobility in Silicon*	*Equilibrium position of parallel plate actuators*	*Applications of piezoresistive sensor*	*Optical MEMS*
	SLO-2	*Scaling Law of Miniaturization*	*Sheet resistivity Numerical Problems*	*Pull-in effect of parallel plate actuators*	*Inertia sensors, pressure sensors based on piezoresistivity*	*Digital Micro Mirror Devices*
S-3	SLO-1	*Simple problems related to miniaturization*	*Crystal planes and Orientations, General scalar relationship between stress and strain*	*Applications of Parallel plate capacitors, Inertia sensor*	*Tactile sensor*	*MEMS devices in Biotechnology*
	SLO-2	*Materials for MEMS: Silicon, Silicon Compounds and Polymers*	*Study of Flexural beams bending under simple loading conditions*	*Pressure sensors*	*Flow sensor*	*Scanning Tunnelling Microscope*
S-4	SLO-1	*Microsystem Fabrication Processes: Photolithography*	*Mechanical deformation of cantilever beam spring*	*Flow sensors*	*Piezoelectric sensing and actuation*	*Polymerase Chain reaction*
	SLO-2	*Ion Implantation*	*Deformation of torsional bars*	*Tactile sensors, Parallel plate actuators*	*Piezoelectric materials*	*Microsystems for DNA amplification*
S-5	SLO-1	*Diffusion*	*Discussing the Simple problems related to force constant*	*Interdigitated Finger capacitors*	*Piezoelectric Accelerometer*	*Fluidic MEMS, Micro channels*
	SLO-2	*Oxidation*	*Origin of intrinsic stress, Methods for characterization*	*Comb drive accelerometer*	*Acoustic sensors*	*Polymer MEMS, Liquid crystal Polymer, PDMS,PMMA*

S-6	SLO-1	*Chemical Vapor Deposition (CVD)*		*Thermal Sensing and Actuation*	*Tactile sensors*	*MEMS devices in space exploration*
	SLO-2	*Physical Vapor Deposition (PVD)*		*Thermal resistance*	*Flow sensors*	*Micro power sources, micro turbines*
S-7	SLO-1	*Surface micromachining*	*Control and compensation of bending*	*Thermal bimorph principle*	*Magnetic actuation*	*Introduction to NEMS*
	SLO-2	*LIGA Process*	*Analysis of essential elements of MEMS system dynamics*	*Thermal bimorph actuator*	*Essential concepts and principles*	*Nano fabrication*
S-8	SLO-1	*Bulk micromachining; Dry etching, Wet etching*	*Discussion*	*Accelerometer based on thermal transfer principle*	*Deposition of Magnetic materials*	*Nano devices*
	SLO-2	*Plasma etching, DRIE*	*Damping & Quality factor, Resonant Frequency*	*Thermal accelerometer with no moving mass*	*Fabrication of Magnetic coil*	*Nano manipulation*
S-9	SLO-1	*MEMS process integration strategies*		*Flow sensors based on thermal transfer principle*	*Magnetic motors*	*Computer aided simulation and design of MEMS devices Background to Finite element method*
	SLO-2	*Microsystem Packaging*	*Active Tuning of spring constant and resonant frequency*	*Infrared sensor*	*Magnetic beam actuation*	*Exposure to commercial software packages*

Course Code	18MHE409T	Course Name	AUTOMATION AND INTELLIGENT SYSTEMS	Course Category	C	Professional Core	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*To impart the basics of automation and intelligent systems.*
CLR-1 :	*Explain the fundamentals of automated systems.*
CLR-2 :	*Identify the elements of CIM and its construction.*
CLR-3 :	*Discuss about the knowledge based systems.*
CLR-4 :	*Apply the artificial intelligent and expert systems in manufacturing.*
CLR-5 :	*Develop the Artificial neural network system for manufacturing*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Understand the basics of automation system and designing of simple automated system*	2	75	75	H	L	H	L	M	H	L	L	M	M	H	H	L	M	-
CLO-2 :	*Explain the modeling tools of Petri Nets and Quenching model*	2	75	80	H	L	M	-	H	M	-	-	-	-	L	L	-	-	L
CLO-3 :	*Analysis the Intelligent manufacturing system components and IMS architecture*	3	80	85	H	-	M	L	H	L	-	M	L	M	M	M	-	-	-
CLO-4 :	*Prescribe the structure of knowledge based systems and approaches in KBS*	2	80	75	H	L	L	M	-	-	-	-	L	-	L	L	L	-	-
CLO-5 :	*Learn the organizational platform in Janus system to implement the Holon control for Manufacturing.*	3	85	80	H	-	L	M	H	M	L	L	-	L	L	L	-	-	H
CLO-6:	*Understand the concept of Artificial Intelligence and Neural Network systems in Manufacturing*	3	85	80	H	L	H	-	L	L	-	-	L	-	-	H	-	-	L

Duration (hour)		Automation Systems	Modelling of Automation Systems	Computer Integrated Manufacturing Systems	Knowledge Based Systems	Machine Learning, Artificial Intelligence and Expert Systems
		09	09	09	09	09
S-1	SLO-1	*Introduction: Automation systems*	*Introduction of Modeling tools-Markov chain models*	*Introduction of CIMS Systems, CIM Definitions*	*Introduction of basic Knowledge Based Systems (KBS).*	*Introduction of Machine Learning*
	SLO-2	*Basic elements of automation system*	*Configuration of Markov model, Assumptions, application*	*Basic four plan Concept, Components, Benefits of CIMS*	*Basic components of Knowledge Based Systems (KBS).*	*Objectives of Machine Learning*
S-2	SLO-1	*Advantages, evolution of automation systems*	*Introduction of Quenching models, types of Quenching models*	*Structural and functional areas of CIMS Systems*	*Designing of Knowledge Based System(KBS)*	*Concepts of Machine Learning*
	SLO-2	*applications of automation systems*	*Various techniques of quenching models and applications*	*Features of CIM Wheel, CIM Evolution*	*Advantages and disadvantages of Knowledge Based System(KBS)*	*Types of Machine Learning and its algorithm with examples*
S-3	SLO-1	*Automation systems in Services*	*Introduction of Petri Nets models, classes of PN Models for manufacturing systems,*	*Introduction of Manufacturing Communication Systems*	*Application and limitation of Knowledge Based System(KBS)*	*Uses of Machine Learning*
	SLO-2	*Packaging and storage services*	*Basics of Petri Nets ,Examples*	*Types, layout of Manufacturing Communication Systems, Applications.*	*Introduction to Knowledge representation structure*	*Merits and Demerits of Machine Learning*
S-4	SLO-1	*Office automation systems*	*Types of Petri Nets models ,Properties of PN models,*	*Definition of Data redundancy, types , advantages of Data redundancy*	*Approaches in KBS.*	*Fundamental of Artificial Intelligence*
	SLO-2	*Stages of Growth, Basic activities , advantages and disadvantages of office Automation*	*Basics architecture of PN Models*	*Basic Definition of top-down and bottom-up approach volume of information,*	*Introduction to Engineering design for knowledge based reasoning*	*Concept and objective of Artificial Intelligence*
S-5	SLO-1	*Types of functions integrated by OAS*	*Structural properties of Petri Nets models, applications*	*Objectives, comparison of top- down and bottom up approaches*	*Engineering design knowledge based reasoning in manufacturing*	*Architecture of Artificial Intelligence*
	SLO-2	*Documentation and Communication*	*Discussion*	*Important roles of top- down and bottom up approaches*	*Introduction to Multi- agent manufacturing system*	*Various types of design pattern in Artificial Intelligence*
S-6	SLO-1	*Designing of simple automation systems*	*Various modeling of Petri Nets,*	*Introduction of intelligent manufacturing system, basic definition*	*Designing of Multi- agent manufacturing system*	*Application and advantages of Artificial Intelligence*

	SLO-2	*Components of simple automated design*	*Analysis methods of PN models*	*Basic concept of IMS, Components of IMS,.*	*Advantages and disadvantages of Multi- agent manufacturing system*	*Conceptual learning Expert Systems*
S-7	SLO-1	*Interlocking between feed and opening of the door*	*Differences between simple Petri Nets and high level Petri Nets.*	*Basic Principles of IMS, IMS overview, tools used for IMS*	*Application and limitation of Multi-agent manufacturing system*	*Basics Function of learning Expert Systems*
	SLO-2	*Various design steps and implementation of simple Automation*	*Types of simple Petri Nets, functions, examples*	*IMS architecture, applications of IMS*	*Introduction to Holonic manufacturing systems*	*Fundamental of Neural Networks*
S-8	SLO-1	*Designing of multi level automation systems*	*Types of high level Petri nets ,*	*Introduction of IMS data flow, definitions*	*Designing Holonic manufacturing systems*	*Types of Neural Networks*
	SLO-2	*Design steps and process of Multi level automation*	*Functions of High level Petri Nets , examples*	*Process modeling of data flow diagram, Identify the object of DFD(Data Flow Diagram)*	*Control of Holonic manufacturing systems*	*Application and limitation of Neural Networks in manufacturing*
S-9	SLO-1	*Monitoring the temperature on the basis of supply of fuels,*	*Introduction of PRQN – ESP models, types of PRQN – ESP models*	*Fundamental of IMS Operation,*	*Advantages and disadvantages of Holonic manufacturing systems*	*Introduction of Artificial Neural Networks and Fuzzy Logics*
	SLO-2	*pressure, velocity and calorific value*	*Integrated PRQN – ESP models*	*Tutorial*	*Application and limitation of Holonic manufacturing systems*	*Introduction and Concepts of Fuzzy set , Biological neuron , Artificial neuron*

CLO-2 :	*Understand various data acquisition methods*	2	80	70	H	H	H	H	H	L	-	-	L	-	-	L	M	-	-
CLO-3 :	*Understand standard interfaces to connect external device to PC*	2	80	70	H	H	H	H	H	L	-	-	L	-	-	L	M	-	-
CLO-4 :	*Program and develop VI for various system*	2	80	70	H	H	H	H	H	L	-	-	M	-	-	L	M	-	-
CLO-5 :	*Understand the application of virtual instrumentation in the industry process*	3	80	70	H	H	H	H	H	L	-	-	M	-	-	L	M	-	-

		Introduction to virtual Instrumentation	Data Acquisition Techniques	Interfaces	Concept of Programming	Case Study
Duration (hour)		8	10	9	13	5
S-1	SLO-1	*Concept of virtual instrumentation*	*Introduction to Data Acquisition methods*	*Introduction to various Interfaces*	*Concept of programming*	*Simulation of system using virtual instrumentation- Introduction*
	SLO-2	*Example*	*PC based data Acquisition*	*Interfacing External instrument to a PC*	*Various tools and software available*	*Simple temperature indicator*
S-2	SLO-1	*Historical perspective of virtual instrumentation*	*Board DAQ card*	*RS 232 Interface*	*Concept of VI and Sub VI*	*ON/OFF control*
	SLO-2	*Development of virtual instrumentation*	*Resolution and sampling Frequency*	*RS422,RS485 Interfaces*	*Example*	*Case study-Any industrial process*
S-3	SLO-1	*Block diagram of basic virtual instrumentation*	*I/O techniques and buses,*	*USB standard*	*Display Types*	*PID control*
	SLO-2	*Architecture of virtual instrumentation*	*Analog to digital converter, digital to analog converter*	*Example*	*Digital ,Analog*	*Case study-Any industrial process*
S-4	SLO-1	*Advantages over other conventional programming*	*Multiplexing of Analog Input*	*IEEE 488 standard*	*Display Types*	*CRO Emulation*
	SLO-2	*Example for comparison*	*Single ended and differential ended*	*Example*	*Chart , Oscilloscope type*	*Case study*
S-5	SLO-1	*Application of VI in mechatronics engineering*	*Case Study- Data acquisition using DAQ card*	*Serial Bus*	*Programming constructs: Loops.*	*Simulation of simple second order system*
	SLO-2	*Case Study*	*Concept of sampling, resolution, single and differential ended*	*Example*	*Programming constructs: Charts.*	*Case Study*
S-6	SLO-1	*Review of Digital Instrumentation*	*Strategies for sampling multichannel analog input*	*Introduction to Bus protocol*	*Programming constructs: Arrays.*	
	SLO-2	*Representing Analog Signal in digital domain*	*Example*	*Various Example*	*Example*	
S-7	SLO-1	*Quantization*	*Concept of Universal DAQ card*	*MOD Bus*	*Programming constructs: Clusters*	
	SLO-2	*Sample and hold*	*Example*	*Example*	*Example*	
S-8	SLO-1	*Sampling Theorem*	*Use of Timers*	*CAN Bus*	*Programming constructs: graphs.*	
	SLO-2	*ADC and DAC*	*Example*	*Example*	*Example*	

S-9	SLO-1		*Use of Counter*	*Case Study (Communication protocols I2C,SPI,Serial)*	*Programming constructs: Case structure*	
	SLO-2		*Example*	*Interfacing sensor to the controller*	*Example*	
S-10	SLO-1		*Case Study*		*Programming constructs: sequence*	
	SLO-2		*Real time data acquisition process*		*Example*	
S-11	SLO-1				*Formula nodes*	
	SLO-2				*Local and global variables*	
S-12	SLO-1				*State machine*	
	SLO-2				*State machine*	
S-13	SLO-1				*Rtring and file input/output*	
	SLO-2				*Review of programming*

		Introductory concepts	Image acquisition	Image processing	Image analysis	3-d vision & deep learning
Duration (hour)		7	10	10	8	10
S-1	SLO-1	*Introduction to course*	*Scene constraints*	*Introduction to machine vision software*	*Feature Extraction*	*Classification of 3-D Vision Techniques*
	SLO-2	*Related fields and Industries using vision*	*Performance requirement*	*Software selection criteria*	*Region Features*	*Active Vision - LIDAR*
S-2	SLO-1	*Physics of light*	*Fundamentals of lighting*	*Basics of digital image*	*Template Matching*	*Computational Stereo Vision*
	SLO-2	*Imaging modalities with light*	*Why Lighting is important?*	*Sampling and quantization effects*	*Issues to be addressed*	*Steps in stereo vision*
S-3	SLO-1	*Interactions of light*	*Light sources*	*Gray scale histogram*	*Methods of Template Matching*	*Introduction to Neural Neteorks*
	SLO-2	*Reflection and Refraction*	*Light sources - types and selection*	*Image processing*	*Linear Classification*	*Types of nueral networks*
S-4	SLO-1	*Introduction to machine vision system building*	*lighting techniques*	*Thresholding*	*Corner Detection*	*Back propogation learning*
	SLO-2	*Task Specification*	*lighting techniques - types and selection*	*Contrast stretching*	*Harris Corner Detector*	*Numerical problem*
S-5	SLO-1	*Design of the system*	*Machine vision lenses*	*Image smoothing in spatial domain*	*Keypoint matching*	*Concepts in machine learning learning*
	SLO-2	*Cost calculation*	*Filters*	*Image sharpening in spatial domain*	*Matching methods*	*The Deep Learning Idea*
S-6	SLO-1	*Development, Testing and commissioning*	*Image sensor specifications*	*Edge detection in spatial domain*	*Texture Analysis*	*Application of deep learning in computer vision*
	SLO-2	*Human visual system*	*Terminologies*	*Derivative operators*	*Approaches and methods*	*Concepts in deep learning*
S-7	SLO-1	*Structure of human eye*	*Sensor types based on sensing element*	*Two dimensional discrete Fourier transform*	*Co-occurrence Matrix*	*Convolutional layer of neural network*
	SLO-2	*Comparison with a machine vision system*	*Selection criteria*	*Frequency domain processing for image smoothing*	*Properties of Co-occurrence Matrix*	*Numerical problem*
S-8	SLO-1		*Camera computer interfaces*	*Frequency domain processing for image sharpening*	*Decision making considerations*	*Convolutional neural network (CNN) for image classification*
	SLO-2		*Types and selection*	*Low and high pass filters*	*For various machine vision applications*	*Architecture details*
S-9	SLO-1		*Camera parameters governing geometrical image formation*	*Binary morphology*		*Object detection using CNN*
	SLO-2		*Camera modeling*	*Basic Morphological operations*		*Single shot learning for object detection*

S-10	SLO-1		*Camera calibration*	*Non Linear filters*		*Improving deep learning algorithms*
	SLO-2		*Distortions*	*Color image processing*		*Optimizers*

CLO-1 :	*Demonstrate an understanding of nonlinear dynamics*	*1*	*85*	*80*	*H*	*H*	*H*	*H*	*M*	*H*	*M*	*-*	*M*	*M*	*H*	*M*	*M*	*H*	*M*
CLO-2 :	*Identify the concepts pertaining to optimal and robust control systems*	*1*	*85*	*80*	*H*	*H*	*H*	*H*	*M*	*H*	*M*	*-*	*M*	*M*	*H*	*M*	*M*	*H*	*M*
CLO-3 :	*Demonstrate an understanding of model based predictive control.*	*1*	*85*	*80*	*H*	*H*	*H*	*H*	*M*	*H*	*M*	*-*	*M*	*M*	*H*	*M*	*M*	*H*	*M*
CLO-4 :	*Familiarize on the implementation of optimal state estimators.*	*2*	*85*	*80*	*H*	*H*	*H*	*H*	*M*	*H*	*M*	*-*	*M*	*M*	*H*	*M*	*M*	*H*	*M*
CLO-5 :	*Familiarize on the implementation of adaptive control schemes for systems*	*2*	*85*	*80*	*H*	*H*	*H*	*H*	*M*	*H*	*M*	*-*	*M*	*M*	*H*	*M*	*M*	*H*	*M*
CLO-6 :	*Demonstrate an understanding on the implementation of the design of advanced control systems*	*2*	*85*	*80*	*H*	*H*	*H*	*H*	*M*	*H*	*M*	*-*	*M*	*M*	*H*	*M*	*M*	*H*	*M*

		Non-linear systems	Robust control	Optimal control	Optimal estimation	Adaptive control
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Nonlinear Dynamics*	*Robustness*	*Principle Of Optimality*	*Overview Of Stochastic Processes*	*Need For Adaptive Control*
	SLO-2	*Common Physical Nonlinearities.*	*Sensitivity*	*Dynamic Programming*	*Probability And Random Variables*	*Adaptive Control Schemes*
S-2	SLO-1	*Concept Of Phase Plane Analysis*	*Analysis Of Robustness In System Parameters*	*Hamilton-Jacobi-Bellman Equation.*	*Spectral Analysis Of Stochastic Process,*	*Gain Scheduling*
	SLO-2	*Phase Portraits*	*Analysis Of Uncertainty In System Parameters*	*Hamilton-Jacobi-Bellman Equation.*	*Special Cases: Multivariate Normal Distribution.*	*Gain Scheduling*
S-3	SLO-1	*Singular Points*	*Robust Control Systems.*	*Calculus Of Variations*	*Linear Quadratic Regulator*	*Principle And Design*
	SLO-2	*Symmetry In Phase Plane Portraits*	*Design Of Robust Control Systems.*	*Pontryagin's Minimum Principle*	*Continuous And Discrete Form*	*Principle And Design*
S-4	SLO-1	*Non Linear Systems*	*PID Controlled Systems*	*Bang-Bang Control*	*Kalman Filters*	*Model Reference Adaptive Systems*
	SLO-2	*Equilibrium Points*	*Robust PID Controlled Systems.*	*Bang-Bang Control*	*Variants Of Kalman Filter*	*Principle And Approaches*
S-5	SLO-1	*Stability Analysis*	*Design Of Robust PID Controlled Systems.*	*Nonlinear Programming Methods*	*Extended Kalman Filter*	*The MIT Rule*
	SLO-2	*Lyapunov's Stability Criterion For Linear Systems.*	*Design Of Robust PID Controlled Systems*	*Direct Method*	*Unscented Kalman Filter*	*Determination Of Adaptation Gain.*
S-6	SLO-1	*Stability Analysis*	*Internal Model Control System.*	*Linear Quadratic Regulator Design*	*Kalman Filters : Continuous Time Versions.*	*Model Reference Adaptive Systems*
	SLO-2	*Lyapunov's Stability Criterion For Non-Linear Systems.*	*The Robust Internal Model Control System.*	*Continuous Riccati Equation Forms.*	*Kalman Filters : Continuous Time Versions.*	*Design Of MRAS Using Lyapunov Theory.*
S-7	SLO-1	*Phase Plane Trajectories*	*Pseudo-Quantitative Feedback Systems.*	*Discrete Riccati Equation Forms.*	*Kalman Filters : Discrete Time Versions*	*Self-Tuning Regulators*
	SLO-2	*Construction Of Phase Plane Trajectories.*	*Design Of Pseudo-Quantitative Feedback Systems.*	*Linear Quadratic Regulator Design*	*Kalman Filters : Discrete Time Versions*	*Pole Placement Design.*

S-8	SLO-1	*Describing Function Fundamentals*	*Overview Of Model Predictive Control Key Elements Of MPC.*	*H_2 And H-Infinity Optimal Control.*	*Linear–Quadratic–Gaussian*	*Direct Self-Tuning Regulators.*
	SLO-2	*Describing Function Of Common Nonlinearities*	*Overview Of Model Predictive Control Key Elements Of MPC.*	*H_2 And H-Infinity Optimal Control.*	*Linear–Quadratic–Gaussian (LQG) Control Problem*	*Direct Self-Tuning Regulators.*
S-9	SLO-1	*Describing Function Analysis Of Nonlinear Systems*	*Optimal Control*	*Basics Of Convex Optimization*	*LQG Controller Design And Implementation.*	*Indirect Self-Tuning Regulators.*
	SLO-2	*Stability Analysis By Describing Function Method.*	*Overview Of Methods In Optimal Control.*	*Receding Horizon Principle.*	*LQG Controller Design And Implementation.*	*Indirect Self-Tuning Regulators.*

Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*	Learning			Program Learning Outcomes (PLO)														
CLR-1 :	*Understand the architecture, parts and operation of PLC, Industrial PC and PAC*	1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
CLR-2 :	*Equip with the knowledge of various controllers specifications*	Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLR-3 :	*Familiarize with the Ladder Programming/other programming constructs*																		
CLR-4 :	*Analyze and select the appropriate controller for given applications*																		
CLR-5 :	*Apply the knowledge of PLC, IPC and PAC for solving typical industrial automation problems*																		
Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*																		
CLO-1 :	*Describe the architecture, parts and operation of PLC, Industrial PC and PAC*	2	75	70	H	H	M	H	M	-	-	-	-	-	-	H	H	H	H
CLO-2 :	*Recognize various controllers specifications*	3	75	70	H	H	M	H	M	-	-	-	-	-	-	H	M	M	M
CLO-3 :	*Develop the Ladder Programming/other programming for given applications*	3	75	70	H	H	M	H	M	-	-	-	-	-	-	H	M	M	M
CLO-4 :	*Analyze and select the appropriate controller for given applications*	3	75	70	H	H	M	H	M	-	-	-	-	-	-	H	M	M	M
CLO-5 :	*Apply the knowledge of PLC, IPC and PAC for solving typical industrial automation problems*	3	75	70	H	H	M	H	H	-	-	-	-	-	-	H	M	M	M

		Programmable Logic Controllers (PLC)	Programming of PLC	Application of PLC-Case studies	Industrial PC	Programmable Automation Controllers (PAC)
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to Industrial automation,-Overview of syllabus*	*Hardwired Logic vs Programmable Logic*	*Filling/Draining Control*	*Industrial PC-Introduction and evolution*	*Introduction to PACs*
	SLO-2	*Evolution of PLC , Features*	*Hardwired Logic vs Programmable Logic*	*Filling/Draining Control*	*Industrial PC-Introduction and evolution*	*FPGA based PACs*
S-2	SLO-1	*A short history of Industrial robots*	*Ladder programming*	*Car Park Control*	*Architecture of Generic Industrial PC*	*Compact RIO architecture*
	SLO-2	*Architecture/parts of PLC*	*Logic functions*	*Car Park Control*	*Architecture of Generic Industrial PC*	*Compact RIO architecture*
S-3	SLO-1	*Principles of operation*	*Latching*	*Interlocks, Priority determinism and example*	*Features of IPC*	*RT Processor*
	SLO-2	*Modifying the operation*	*Internal relay*	*Interlocks, Priority determinism and example*	*Types of industrial PCs*	*Reconfigurable I/O FPGA*
S-4	SLO-1	*Comparison with PC*	*Timers: On-delay - Off-delay - retentive timers*	*Part sorting*	*Types of industrial PCs*	*I/O modules-system configuration*
	SLO-2	*PLC selection criteria*	*Timers: On-delay - Off-delay - retentive timers*	*Part sorting*	*Comparison of Various types*	*I/O modules-system configuration*
S-5	SLO-1	*The I/O section-Discrete I/O modules-Analog I/O modules*	*Counters: Up-counter - down-counter -cascading counters and timers*	*Automatic control of warehouse door*	*Industrial control networks-Introduction*	*Software architecture-Programming modes*
	SLO-2	*Special I/O modules- specifications*	*Counters: Up-counter - down-counter -cascading counters and timers*	*Automatic control of warehouse door*	*Industrial control networks-Introduction*	*Scan interface and FPGA Interface modes*
S-6	SLO-1	*The CPU of PLC*	*Shift registers*	*Air-conditioning system*	*Architecture of Industrial control networks*	*Key considerations for using PAC*
	SLO-2	*Memory design*	*Shift registers*	*Air-conditioning system*	*Architecture of Industrial control networks*	*Key considerations for using PAC*
S-7	SLO-1	*Programming terminal device*	*Handling analog inputs*	*Applications in Fluid power automation*	*Requirements of Industrial control networks*	*Motion control with PAC-case study*
	SLO-2	*Programming terminal device*	*Handling analog inputs*	*Applications in Fluid power automation*	*Industrial Field bus and Industrial Ethernet*	*Motion control with PAC-case study*
S-8	SLO-1	*Recording and retrieving data*	*Introduction to IL&SFC*	*PID Control in PLC*	*Industrial Field bus and Industrial Ethernet*	*Vision based system using PAC- Case study*

	SLO-2	*Recording and retrieving data*	*Introduction to IL & SFC*	*PID Control in PLC*	*Security issues and threats in industrial networks*	*Vision based system using PAC- Case study*
S-9	SLO-1	*HMI*	*Introduction to FBD and ST*	*PLC based servo system*	*Practical modern SCADA Protocols*	*Comparison between PLC, IPC and PAC*
	SLO-2	*HMI*	*Introduction to FBD and ST*	*PLC based servo system*	*Practical modern SCADA Protocols*	*Concluding Remarks*

Course Code	18MHE415T	Course Name	DIGITAL MANUFACTURING	Course Category	C	Professional Core	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*To learn about CAE, PLM and numerical control machining integration technology.*
CLR-2 :	*To be familiar in interfacing and Communication with industrial machinery.*
CLR-3 :	*To know to formulate manufacturing computational model.*
CLR-4 :	*To gain knowledge about intelligent controls used in various machinery environment.*
CLR-5 :	*To know about future development in digital manufacturing.*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Gain knowledge in fundamentals of Digital Manufacturing*	1	85	80	H	H	-	H	-	-									
CLO-2 :	*Impart Knowledge in industrial machinery*	1	85	80	H	H	H	-	H	-									
CLO-3 :	*Learn the information characteristics of manufacturing*	1	85	80	H	H	H	H	H										
CLO-4 :	*Understand the concept ofintelligent control in digital manufacturing.*	2	85	80	H	H	H	H	H										
CLO-5 :	*To impart future development and application of digital manufacturing.*	2	85	80	H			H		H									

Duration (hour)		Introduction	Modeling	Manufacturing Information System	Intelligent control	Future developments
		9	9	9	9	9
S-1	SLO-1	*concepts of digital manufacturing*	*manufacturing computational model*	*information characteristics of manufacturing*	*Introduction to intelligent control in digital manufacturing*	*Future development and application of digital manufacturing*
	SLO-2	*Introduction to CIM and digital manufacturing.*	*Modeling theory of digital manufacturing,*	*Information activities*	*Intelligent multi information sensing.*	*Various digital technologies in product lifecycle*
S-2	SLO-1	*product life cycle management(PLM).*	*basic concepts of computing manufacturing methodology,*	*manufacturing informatics.*	*Concept of multi information sensing.*	*cax technology integration.*
	SLO-2	*Applications of PLM*	*Application of C space*	*Measurement of manufacturing information*	*Application of sensor in processing*	*Digital equipment*
S-3	SLO-1	*product data management (PDM).*	*Application of screw space.*	*Basic concept of measurement of Manufacturing information*	*Tool condition monitoring.*	*digital processing technology.*
	SLO-2	*Applications of PDM*	*Virtual Prototyping*	*synthesis of manufacturing information*	*Mechanism of tool condition monitoring*	*Introduction to MEMS*
S-4	SLO-1	*Virtual environment for digital manufacturing.*	*Basic theory of virtual prototyping*	*Mechanism of synthesizing manufacturing information.*	*Intelligent multi information fusing*	*Basic concept and application of MEMS in Digital manufacturing*
	SLO-2	*Application of virtual environment (DM)*	*Application of virtual prototyping*	*Materialization of manufacturing information*	*Elements of multi information fusing*	*Basic concept and application of NEMS in Digital manufacturing*
S-5	SLO-1	*Operation mode of digital manufacturing system.*	*Reverse Engineering*	*Basic layout of Materialization of manufacturing information*	*Multi sensor fusion in tool state monitoring.*	*micro nanoequipement*
	SLO-2	*Mechanism of operation mode*	*Basic theory and application of Reverse Engineering.*	*integration model for manufacturing information.*	*Self learning*	*Basic concepts of micro nanoequipement systems.*
S-6	SLO-1	*architecture of digital manufacturing system.*	*Discrete model of manufacturing computing.*	*Block diagram of integration model for manufacturing information.*	*Autonomy*	*Extremalization of digital manufacturing*
	SLO-2	*Introduction to CAE*	*Discrete model of controlled process in manufacturing*	*Mechanism of integration model*	*Compatibility*	*complex mechanical system modeling.*
S-7	SLO-1	*CAE:engineering products*	*information model of manufacturing computing.*	*introduction to sharing manufacturing resources.*	*Openness of sensor fusion in tool state monitoring.*	*complex electrical system modeling.*

	SLO-2	*Design representation*	*Geometric modeling*	*Principle of sharing manufacturing resources.*	*Tool condition monitoring based on fuzzy theory*	*Digital manufacturing Technology in Micro Nano Manufacturing*
S-8	SLO-1	*design process*	*theoretical foundation for geometric modeling*	*.mechanism of sharing manufacturing resources*	*Tool condition monitoring based on neural network.*	*Bionic Machinery*
	SLO-2	*role of cad.*	*geometric modeling forms.*	*Application of Sharing manufacturing resources.*	*Data mining applied to digital manufacturing*	*Application of bionic Machinery in digital manufacturing*
S-9	SLO-1	*Introduction to caX technology*	*Geometric reasoning in manufacturing computing.*	*Introduction to manufacturing information security*	*Application of data mining in digital manufacturing*	*Bio-Robot*
	SLO-2	*Basic concepts of caX technology*	*Application of geometric modelling in manufacturing computing*	*Basic theory of manufacturing information security.*	*knowledge based manufacturing system.*	*Application of bio robot in digital manufacturing*

Course Code	18MHE416T	Course Name	PROCESS CONTROL ENGINEERING	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Identify the need for process control*
CLR-2 :	*Gain the knowledge on different controller modes*
CLR-3 :	*Build the various concepts of auto tuning*
CLR-4 :	*Utilize the control algorithm in pneumatic*
CLR-5 :	*Gain knowledge of multi loop control system*
CLR-6 :	*Introduce the knowledge of non-linear control algorithms*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Knowledge of process control*	2	75	70	H	M	M	H	M	-	-	-	M	M	-	H	H	H	H
CLO-2 :	*Knowledge about the different controller modes*	3	75	70	H	M	M	H	M	-	-	-	M	M	-	H	M	M	M
CLO-3 :	*Design various control tuning methods*	3	75	70	H	M	M	M	M	-	-	-	M	M	-	H	L	L	L
CLO-4 :	*Application of control algorithm in pneumatic*	3	75	70	H	M	M	-	M	-	-	-	-	M	-	H	M	M	M
CLO-5 :	*Evaluate about the multi loop control system*	3	75	70	H	M	M	H	M	-	-	-	M	M	-	H	L	L	L
CLO-6 :	*Interpret the knowledge of non-linear control algorithms*	3	75	70	H	M	-	H	H	-	-	-	M	M	-	H	H	H	H

		Introduction to Process Control	Controller Modes and Tuning	Final Control Elements	Multi Loop System	Nonlinear Systems and Intelligent Controllers
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Process control: Introduction,*	*First order system,*	*Basic of I/P converter.*	*Need, types of feed-forward controller*	*Non-linear elements in loop: Limiters*
	SLO-2	*Need for process control, terminologies.*	*second order system*	*Description about I/P converter.*	*Introduction to steady state and dynamic,*	*Non-linear elements in loop: dead zones*
S-2	SLO-1	*Characteristics of process.*	*Definition of Multi position action and floating action*	*Introduction of Pneumatic and electric actuators*	*Mathematical equation for steady state and dynamic feed-forward control*	*Non-linear elements in loop :backlash*
	SLO-2	*Liquid level control system Introduction*	*Need of Multi position action and floating.*	*Description about Pneumatic and electric actuators*	*Mathematical equation for dynamic feed-forward control*	*Non-linear elements in loop: dead band velocity.*
S-3	SLO-1	*Block diagram of Liquid level control system*	*Diagram of Multi position action and floating action:*	*Control algorithm for Servo motor*	*Definition of ratio control*	*Introduction of Limiter, negative resistance.*
	SLO-2	*Description of control elements used in liquid level control*	*Application of Multi position action, floating action:*	*Control algorithm for Stepper motor*	*Block diagram of ratio control, uses of ratio control.*	*Description of Limiter, negative resistance*
S-4	SLO-1	*Introduction of temperature control system*	*Introduction of PI, PD, PID controllers*	*Definition and need of Valve positioner control valves*	*Definition of cascade controller for heat exchanger*	*Introduction of optimal controller*
	SLO-2	*Block diagram of temperature control system*	*Block diagram and mathematical model of PI Controller*	*Types and configuration of valve position.*	*Advantages of cascade control*	*Definition of optimal controller*
S-5	SLO-1	*Description of control elements used in temperature control.*	*Block diagram and mathematical model of PD Controller*	*Introduction of control valves.*	*Adaptive control: Definition, objective, types, gain schedule adaptive controller.*	*Need for an optimal controller*
	SLO-2	*Explanation about temperature control*	*Block diagram and mathematical model of PID Controller*	*Characteristics of control valves.*	*Block diagram description of adaptive control*	*Structure of an optimal controller.*
S-6	SLO-1	*Introduction of process dynamics*	*Basic Selection criteria for controllers.*	*Inherent characteristics of control valves.*	*Inferential control: Need, inferential controller for distillated column*	*Introduction of Dynamic matrix controller (DMC)*

	SLO-2	*Elements of process dynamics*	*Description Selection criteria for controllers.*	*Installed characteristics of control valves.*	*block diagram description of Inferential control*	*Definition of Dynamic matrix controller*
S-7	SLO-1	*Interacting systems*	*Need of controller tuning,*	*Introduction of Mathematical modeling of pneumatic control valve.*	*Split-range control, objective of split range control*	*Structure of Dynamic matrix controller*
	SLO-2	*Non interacting systems*	*Criteria for good control.*	*Description of Mathematical modeling of pneumatic control valve.*	*Block diagram for split range control.*	*tuning parameters required to implement Dynamic matrix controller*
S-8	SLO-1	*Degrees of freedom: Definition*	*Tuning methods: Basic of Choen-Coon method.*	*Valve body*	*Introduction of Internal mode control*	*Introduction of self-tuning controller*
	SLO-2	*Determination of degrees of freedom.*	*Description of Choen-Coon method.*	*Commercial valve` bodies*	*Principle and structure of Internal mode control*	*Need for self-tuning controller*
S-9	SLO-1	*Introduction of Continuous and batch process.*	*Introduction of Process identification for controller tuning.*	*Control valve sizing*	*Principle of Model predictive control*	*Structure of self- tuning controller.*
	SLO-2	*Description about Continuous and batch process.*	*Description of Process identification for controller tuning.*	*Cavitation and flashing*	*Theory of model predictive control, applications.*	*Case study: Process control in chemical plant.*

		Introduction	Robotic Applications	Medical Applications	Automobile Applications	Other applications
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Mechatronics design concept and framework.*	*Case study 1: Parallel manipulators: state of art and perspectives*	*Application of robotics and mechatronic systems to neuro rehabilitation: Overview.*	*Electronics car engine management system*	*Case study 1:Thermal cycle fatigue of a ceramic plate*
	SLO-2	*Overview of mechatronics key elements.*	*Theoretical aspects of parallel manipulators and Practical applications*	*Robotic systems for upper limbs rehabilitation.*	*Stepper motor and vacuum operated throttle actuator*	*Case study 2:Strain gauge weighing system*
S-2	SLO-1	*Definition of mechatronics: Sequential integration and concurrent integration.*	*Development of parallel manipulator*	*Robotic systems for lower limbs rehabilitation.*	*Adaptive cruise control system*	*Case study 3:pH control system*
	SLO-2	*Integrated design issues in mechatronics.*	*Direct and inverse kinematics*	*Material and methods of neurorehabilitation system.*	*Adaptive cruise control system*	*Case study 3:pH control system*
S-3	SLO-1	*Introduction to real time interfacing*	*Bio parallel mechanism of mastication robot*	*Mechatronic systems for the functional assessment and the movement analysis.*	*Antilock braking system*	*Case study 4: Skip control of a CD player*
	SLO-2	*Elements of Data acquisition and control system*	*Mandibular movement and its parallel mechanism*	*Open issues.*	*Antilock braking system*	*Case study 4: Skip control of a CD player*
S-4	SLO-1	*Transducer and signal conditioning*	*Case study 2: Overview of a bio-inspired small sized wall climbing caterpillar Robot.*	*Overview of postural mechatronic assistant for laparoscopic solo surgery.*	*Electronics suspension control system*	*Case study 5: Position control of permanent magnet dc gear motor*
	SLO-2	*Transducer and signal conditioning*	*System architecture and Control methods of a bio-inspired Robot.*	*Overview of postural mechatronic assistant for laparoscopic solo surgery.*	*Electronics suspension control system*	*Case study 5: Position control of permanent magnet dc gear motor*
S-5	SLO-1	*Devices for data conversion*	*Climbing mechanism of the caterpillars.*	*Exoskeleton development and control*	*Electronic steering control for 4WS configuration*	*Case study 6: Testing of transportation bridge surface materials.*
	SLO-2	*Data conversion process*	*Mechanical module design and inchworm configuration realization, control realization.*	*Human robot interface*	*Low tire pressure warning system*	*Case study 6: Testing of transportation bridge surface materials.*

S-6	SLO-1	*Linking HMI design and system design*	*Locomotion control.*	*Wearable exoskeletal rehabilitation robot for interactive therapy*	*Automatic car parking system*	*PC based computer numerically controlled (CNC) drilling machine*
	SLO-2	*Human machine interface design process.*	*Case study 3: Firefighting Robot, Multiple interfaces based firefighting Robot.*	*Robot controller and therapy modes*	*Fuel quantity, coolant temperature measurement system*	*PC based computer numerically controlled (CNC) drilling machine*
S-7	SLO-1	*HMI design method*	*Case study 4: Torque cancelling system for quick-motion robots*	*Force sensing in medical robotics*	*Oil pressure and vehicle speed measurement system*	*Auto control system for green house temperature*
	SLO-2	*Designing human-automation interaction*	*Case study 4: Torque cancelling system for quick-motion robots*	*Haptic feedback using robotics surgery*	*Onboard diagnosis system*	*Mechatronics design of coin counter*
S-8	SLO-1	*Human error, interaction and the development of safety -critical systems*	*Case study 5: Recognition of finger motions for bio electric prosthetic hand via surface EMG*	*Model based fault detection and isolation for a powered wheelchair*	*Series hybrid electric vehicle*	*Magnetic levitation system*
	SLO-2	*Human error, interaction and the development of safety -critical systems*	*Case study 5: Recognition of finger motions for bio electric prosthetic hand via surface EMG*	*Model based fault detection and isolation for a powered wheelchair*	*Parallel hybrid electric vehicle*	*Washing machine control.*
S-9	SLO-1	*Cognitive function analysis in the design of human and machine multi agent system*	*Case study 6: Swimming Mechanism for robotic fish*	*Accurate positioning for intervention on a beating heart using crawling robot*	*Mechatronics design of an unmanned ground vehicle for military applications: Historical perspective, Current military systems*	*Electronic control of a balancing robot.*
	SLO-2	*Cognitive function analysis in the design of human and machine multi agent system*	*Case study 6: Swimming Mechanism for robotic fish*	*Accurate positioning for intervention on a beating heart using crawling robot*	*Design considerations, hardware implementation of unmanned ground vehicle, Vehicle software architecture.*	*Pneumatic controlled car park barrier system.*

Course Code	15MHE418T	Course Name	REAL TIME EMBEDDED SYSTEMS	Course Category	C	Professional Core	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MHC205J	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Learn the basics of Embedded System*
CLR-2 :	*Perceive the concept of interrupts,memory and I/O management*
CLR-3 :	*Study the functions and scheduling of real –time operating systems*
CLR-4 :	*Learn the concept of semaphore,Queue and pipes*
CLR-5 :	*Know the different approach of a Real Time characteristics*
CLR-6 :	*Implement the concept of interrupts with an interfacing applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Explain the fundamentals of embedded system design with real time system*	2	90	85	H	L	H	L	M	-	H	-	-	-	-	L	M	-	M
CLO-2 :	*Analyze the fundamental concepts and can control with OS*	2	90	80	H	L	M	L	M	L	M	-	-	H	-	H	M	M	L-
CLO-3 :	*Evaluate the feasible algorithm and interrupts with interface applications*	2	90	85	H	L	H	L	M	L	M	-	-	H	-	M	M	H	M
CLO-4 :	*Implement the concept of RTOS and interrupts with interface*	2	95	90	H	L	H	L	M	-	M	-	-	M	-	M	M	H	M
CLO-5 :	*Analyse real time systems with regard to keeping time and resource restrictions*	2	90	85	H	L	M	L	H	L	M	-	-	M	-	M	H	H	H
CLO-6 :	*Know the concepts of interfacing applications*	2	85	85	H	L	H	M	M	-	-	-	-	M	-	M	M	H	M

		Introduction to Embedded System	Interrupts in Embeddded Systems	Overview of RTOS	Real-Time Characteristics	Communication Interfacing
Duration (hour)		09	09	09	09	09
S-1	SLO-1	*Introduction to the course and Discussion*	*Terminologies of an Embedded System.*	*Introduction*	*Introduction to Real time Characteristics*	*Introduction to converters and its types*
	SLO-2	*Embedded computers,Characteristics of embedded computing,challenegs in embedded computing system design*	*Gates and timing diagram*	*Multiple task and Multiple processes:Task and Processess,Multirate Systems*	*Algorithm:Clock driven approach*	*Types od ADCs and its working principle*
S-2	SLO-1	*Embedded System Design process:Requirements,Specification*	*Memory and its types*	*Timing requirements on process,CPU metrics*	*Weighted round robin approach*	*Types of DACs and its working principle*
	SLO-2	*Architecture Design*	*Memory and its types*	*Process stateandscheduling,some scheduling policies*	*Weighted round robin approach*	*Types of DACs and its working principle*
S-3	SLO-1	*Designing of hardware components*	*Microprocessor buses*	*Running periodic process,RTOS task and task state*	*Priority Driven Approach:Introduction and Concepts*	*Introduction to programmable Interface with A/D and its working principle*
	SLO-2	*Designing of software components*	*Programming the Input and Output Devices*	*Preemptive Real Time Operating Systems,Multithread preemptive schedule*	*Priority Driven Approach:Introduction and Concepts*	*Introduction to programmable Interface with A/D and its working principle*
S-4	SLO-1	*System Integration*	*Direct Memory Access*	*Priority Based Scheduling:Introduction and its types*	*Example of Priority Driven Approach*	*Introduction to programmable Interface with D/A and its working principle and Digital Voltmete*
	SLO-2	*System Integration*	*Direct Memory Access*	*Rate-Monoitic Scheduling*	*Example of Priority Driven Approach*	*Introduction to programmable Interface with D/A and its working principle and Digital Voltmete*
S-5	SLO-1	*Formalism for System Design:Structural Description*	*Interrupts: Built interrupts*	*Earliest Deadline First scheduling.*	*Dynamic versus Static systems*	*Introduction and working principle of Control robot system*

	SLO-2	*Formalism for System Design:Structural Description*	*Interrupts basis:Supervisemode,Exceptions and Traps*	*Evaluation of operating systems performance*	*Dynamic versus Static systems*	*Introduction and working principle of Control robot system*
S-6	SLO-1	*Formalism for System Design:Behavioral Description*	*Shared Data problem*	*Design of Telephone Answering Machine*	*Effective release Times and deadline*	*Introduction and working principle of Pulse Width Modulation*
	SLO-2	*Formalism for System Design:Behavioral Description*	*Disadvantage and interrupt latency*	*Design of Telephone Answering Machine*	*Effective release Times and deadline*	*Introduction and working principle of Motor Speed Controller*
S-7	SLO-1	*Design Example: Data Compressor*	*Embedded System evolution trends*	*Process synchronizationand Message queues.*	*Optimality of the Earliest Deadline First(EDF) algorithm:Introduction*	*Serial Communication and parallel Communication*
	SLO-2	*Design Example: Data Compressor*	*Embedded System evolution trends*	*Mailboxes,Pipes,critical selection*	*Optimality of the Earliest Deadline First(EDF) algorithm:Introduction*	*Wireless Communication*
S-8	SLO-1	*Design Example: Data Compressor*	*Interrupt routines in an RTOS environment*	*Semaphores:Classical synchronization problem,deadlocks.*	*Real Time concepts of EDF*	*Serial Protocols:I²C,CAN and USB*
	SLO-2	*Design Example: Data Compressor*	*Interrupt routines in an RTOS environment*	*Semaphores:Classical synchronization problem,deadlocks.*	*Real Time concepts of EDF*	*Serial Protocols:I²C,CAN and USB*
S-9	SLO-1	*Design Example:Alarm Clock*	*Real time clock*	*Basic Design using a Real-Time Operating System:Principle*	*Challenges in validating timing constraints in priority driven systems*	*Parallel Protocols:PCI and ARM Bus*
	SLO-2	*Design Example:Alarm Clock*	*System Clock*	*Encapsulating semaphores and Queues,Hard Real –Time Scheduling Considerstions*	*Off-line versus online scheduling*	*Wireless Protocols:IrDA,Bluetoothand IEEE 802.11*

CLR-6 :	*Impart the knowledge of advanced control systems for implementation.*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Comprehend the basics of fuzzy logic*	1	85	80	H	H	M	M	M	L	M	L	L	L	L	M	H	H	H
CLO-2 :	*Understand the learning in neural network systems*	1	85	80	H	H	M	M	M	L	M	L	L	L	L	M	H	H	H
CLO-3 :	*Familiarize with the controllers based on fuzzy logic.*	1	85	80	H	H	M	M	M	L	M	L	L	L	L	M	H	H	H
CLO-4 :	*Demonstrate synthesis of controllers based on fuzzy logic.*	2	85	80	H	H	M	M	M	L	M	L	L	L	L	M	H	H	H
CLO-5 :	*Implement control systems based on artificial neural networks.*	2	85	80	H	H	M	M	M	L	M	L	L	L	L	M	H	H	H
CLO-6 :	*Implement control system based on fuzzy or neural network*	2	85	80	H	H	M	M	M	L	M	L	L	L	L	M	H	H	H

		Fuzzy logic	Artificial neural networks	Hybrid intelligent systems	Fuzzy control	Neural control
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Intelligent Systems*	*Artificial Neural Networks*	*Neuro-Fuzzy Systems*	*Knowledge-Based Fuzzy Control*	*Overview Of Supervisory Control.*
	SLO-2	*Intelligence In Machines*	*Operation Of A Single Artificial Neuron.*	*Fuzzy Basis Function Networks*	*Fuzzy PID Control*	*Direct Inverse Control*
S-2	SLO-1	*Intelligent Control System Structure*	*Network Architectures*	*Adaptive Neuro-Fuzzy Inference System - ANFIS*	*Knowledge-Based Fuzzy Control*	*Direct Learning Schemes.*
	SLO-2	*Soft Computing Techniques For Intelligent Control*	*Feed Forward Networks*	*Adaptive Neuro-Fuzzy Inference System - ANFIS*	*Model Reference Based Fuzzy Control*	*Indirect Learning Schemes.*
S-3	SLO-1	*Fuzzy Logic Systems*	*Radial Basis Function Networks*	*Training Algorithm -Supervised Algorithm*	*Fuzzy Control.*	*Model Reference Neural Adaptive Control - Direct Control*
	SLO-2	*Fuzzy Set Theory*	*Definition And Types Of RBF*	*Training Algorithm -Supervised Algorithm*	*Hybrid Fuzzy Control*	*Model Reference Neural Adaptive Control - Direct Control*
S-4	SLO-1	*Fuzzy Operations*	*Recurrent Networks*	*Training Algorithm -Unsupervised Algorithm.*	*Adaptive Fuzzy Control -Direct Adaptive Control.*	*Model Reference Neural Adaptive Control - Indirect Control*
	SLO-2	*Fuzzy Relations*	*Recurrent Network Architecture*	*Training Algorithm -Unsupervised Algorithm.*	*Adaptive Fuzzy Control -Direct Adaptive Control.*	*Model Reference Neural Adaptive Control - Direct Control*
S-5	SLO-1	*Fuzzy Implications*	*Learning In Neural Networks*	*Back Propagation Algorithm*	*Adaptive Fuzzy Control -Indirect Adaptive Control*	*Fundamentals Of Internal Model Control*
	SLO-2	*Theory Of Approximate Reasoning*	*Supervised Learning*	*Back Propagation Algorithm*	*Adaptive Fuzzy Control -Indirect Adaptive Control*	*Model Predictive Control*
S-6	SLO-1	*Fuzzy Inference System*	*Learning In Neural Networks*	*Dynamic Back Propagation*	*Self-Organizing Fuzzy Control*	*MPC With NN*
	SLO-2	*Fuzzifier*	*Unsupervised Learning*	*Dynamic Back Propagation*	*SOFC Based On The Direct Lyapunov Method.*	*MPC Vs Conventional Control*

S-7	SLO-1	*Fuzzy Rule Base*	*Activation Function, Adding A Bias*	*Orthogonal Least Squares Algorithm*	*SOFC Based Hurwitz Stability Criteria.*	*MPC Features*
	SLO-2	*Fuzzy Inference Engine*	*Perceptron Learning Rule*	*OLS Learning*	*SOFC Based On Sensitivity Functions*	*MPC Control Law And Convergence*
S-8	SLO-1	*Defuzzifier*	*Back Propagation Algorithm*	*Orthogonal Least Squares And Genetic Algorithm*	*Model Based Fuzzy Control*	*Pros And Cons Of MPC*
	SLO-2	*Defuzzification Methods*	*Back Propagation Algorithm*	*Orthogonal Least Squares And Genetic Algorithm*	*Fuzzy Inverse Control.*	*Feed Forward Control.*
S-9	SLO-1	*Fuzzy Logic Controllers*	*Neural Network Controller*	*Adaptive Least Squares Learning Using Genetic Algorithm.*	*Fuzzy Model Based Predictive Control.*	*FFC With NN*
	SLO-2	*General Case Study*	*Application Of Neural Networks In Modeling, Estimation And Control*	*Adaptive Least Squares Learning Using Genetic Algorithm.*	*Fuzzy Internal Model Control*	*FFC Vs Conventional Control*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards		Nil	

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the different types intelligent mechatronics*
CLR-2 :	*Analyze the biological foundation used in intelligent systems*
CLR-3 :	*Identify the modeling technique of intelligent mechatronics system using bond graph*
CLR-4 :	*Identify the intelligent system applied into robots*
CLR-5 :	*Identify the intelligent system applied to automobiles*
CLR-6 :	*Utilize the knowledge of artificial intelligence, neural network, bond graph modeling into developing and controlling of mechatronics system.*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3

		Introduction to Intelligent Mechatronics Systems	Biological Foundations to Intelligent Systems	Bond graph modeling of Mechatronics	Case Studies - I	Case Studies - II
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Design of a mechatronics system*	*Artificial Neural Networks: Introduction*	*Bond graph for modeling, control and diagnostic*	*Introduction: Automatically evaluating the training of the laparoscopic surgeon*	*Introduction: Rail bound mechatronics systems.*
	SLO-2	*Autonomous supervisory control*	*AI programming vs conventional programming*	*Power variable, energy variable*	*Development of three-dimensional registration system, user interface*	*Hybrid planning for self-optimization*
S-2	SLO-1	*Intelligent mechatronics device*	*Knowledge acquisition and knowledge representation*	*Pseudo bond graph, analogy of energy variable*	*Calibration of the mechatronics evaluation system*	*Active suspension system*
	SLO-2	*Hierarchical architecture*	*Back - propagation networks*	*Bond graph elements: passive, active and junctions, two port elements*	*Automatic evaluation of laparoscopic training, discussion.*	*Air Gap Adjustment System (AGAS)*
S-3	SLO-1	*System structure of intelligent mechatronics*	*Radial basis function networks*	*Causality: sequential causality assignment procedure(SCAP), Bicasual bond graph*	*Artificial intelligence for an automatic robotic excavator*	*Overview of the hybrid planning architecture.*
	SLO-2	*Introduction to Network intelligent mechatronics*	*Implementation of neural network*	*Casual path: Types*	*Development of low cost electromyographyhy(EMG)prosthetic hand: background*	*Modeling and optimization of the suspension system*
S-4	SLO-1	*Structure of Network intelligent mechatronics*	*Fuzzy logic: Fuzzy set and membership functions.*	*State space equation, state equation, properties of sate variable*	*Mechanical design and modeling*	*Modeling for air gap adjustment and prediction.*
	SLO-2	*Introduction to Cognitive intelligent mechatronics*	*Knowledge representation and inference mechanism.*	*State space equation of an electrical system*	*Electronic design ,control and actuators*	*Modeling for air gap adjustment and prediction.*
S-5	SLO-1	*Structure of Cognitive intelligent mechatronics.*	*Fuzzy reasoning and control*	*Bond graph for electrical system*	*Robust monitoring of an omnidirectional mobile robot: introduction*	*Automatic transmission system*
	SLO-2	*Introduction to Communicative intelligent mechatronics*	*Developing a fuzzy system*	*Bond graph for mechanical system*	*Bond graph modeling, fault detection and isolation using bond graph*	*Concept of Hybrid electric vehicles*

S-6	SLO-1	*Structure and operation of Communicative intelligent mechatronics*	*Fuzzy neural systems: Feed forward network*	*Bond graph for milti energy domain system*	*Residual evaluation, application and conclusion*	*Concept of High speed tilting trains*
	SLO-2	*Introduction to Biological intelligent mechatronics*	*Feedback neural networks*	*Multi-port field element: RS element*	*Dynamic modeling and control of an hexapod robot: Introduction*	*Concept of Path planning robot*
S-7	SLO-1	*Structure and operation of Biological intelligent mechatronics.*	*Genetic algorithm and traditional search methods*	*C field, I field, IC field*	*Geometric modeling, hexapod dynamic model, force distribution problem*	*Introduction to Intelligent autonomous vehicle ,definition and problem formulation*
	SLO-2	*Introduction to Human assistive intelligent mechatronics*	*Genetic algorithm: Data analysis and prediction*	*R field and vector junction*	*Quadratic problem formulation and solution*	*Model based fault detection and isolation for electric vehicle*
S-8	SLO-1	*Structure and operation of Human assistive intelligent mechatronics.*	*Implementation of genetic algorithm*	*Vector bond graph for rigid body dynamics*	*Computed torque control and conclusion*	*Results of the co-simulations and conclusion*
	SLO-2	*Fault ,failure, safety and fault tolerance*	*Implementation of genetic algorithm*	*Bond graph modeling of uncertain systems*	*Control of free and constrained motion of a C5 parallel robot, adaptive position and force controller design*	*Vehicle braking ,brake system model*
S-9	SLO-1	*Signal conditioning and interfacing*	*Hybrid genetic algorithm: Lamarckian evaluation, memetic algorithm*	*Bond graph for modeling, control and diagnostic*	*Mode control for unmanned aerial vehicle*	*Regenerative braking,4 wheel vehicle model and conclusion*
	SLO-2	*Signal conditioning and interfacing*	*Hybrid genetic algorithm: Lamarckian evaluation, memetic algorithm*	*Power variable, energy variable*	*Mode control for unmanned aerial vehicle*	*Regenerative braking,4 wheel vehicle model and conclusion*

		Introduction	Kinematics and Control of Mobile Robots	Sensors for Mobile Robots	Localization and Path Planning	Aerial and Underwater Robots
Duration (hour)		6	10	9	10	10
S-1	SLO-1	*Mobile Robots vs. Manipulators*	*Kinematic constraints of a fixed standard wheel*	*Sensors for mobile robots*	*Introduction to localization*	*Non-ground modality*
	SLO-2	*Introduction to autonomous mobile robots*	*Derivation*	*Definitions, classification*	*Localization challenges*	*Case studies*
S-2	SLO-1	*Locomotion aspects of mobile robots*	*Kinematic constraints of a omni-directional wheel*	*Characteristics applicable to mobile robots*	*Belief representations*	*Aerial robots*
	SLO-2	*Locomotion aspects of mobile robots*	*Derivation*	*Relating the characteristics to performance attributes of mobile robot*	*Considerations in Belief representations*	*Types and comparison*
S-3	SLO-1	*Introduction to wheeled mobile robots*	*Forward kinematic models of three wheeled differential drive robot*	*Physical and computational attributes of sensors applicable to mobile robots*	*Map representations*	*Multi-rotor aerial robot*
	SLO-2	*wheel types*	*Derivation*	*sensor noise and sensor aliasing*	*Types*	*Types and applications*
S-4	SLO-1	*Wheeled Configurations*	*Forward kinematics of a three wheeled omni-directional robot*	*GPS and heading sensors*	*Probabilistic localization*	*Quadrotor aerial robot*
	SLO-2	*Various wheeled configurations*	*Derivation*	*Principles, challenges and interpretation*	*Markov localization*	*Modelling of dynamics*
S-5	SLO-1	*Maneuverability, controllability*	*Degree of freedom, differential degrees of freedom*	*Light and sound based ranging*	*Introduction to Kalman filtering*	*Modelling of flight controller*
	SLO-2	*stability of mobile robots*	*Degree of Maneuverability*	*Principles, challenges and interpretation*	*Derivation of Kalman gain*	*Derivation*
S-6	SLO-1	*Wheeled Locomotion*	*Mobility analysis of various wheeled configurations*	*Wheel Odometry*	*Kalman filter for localization*	*Commercial flight controllers*
	SLO-2	*Case studies*	*Two, three, four, five and six wheeled configurations*	*Implementation algorithm for wheel odomoetry*	*Example case study and derivation*	*Specifications and selection criteria*
S-7	SLO-1		*Workspace and trajectory considerations*	*Wheel Odometry Critical Analysis*	*Sensor fusion using Kalman filter*	*Underwater vehicles*
	SLO-2		*Comparison of manuerability and controllability*	*Wheel Odometry error reduction*	*Derivation*	*Foundations topics and challenges*

S-8	SLO-1		*State space modelling of three wheeled differential drive robot*	*Vision for mobile robots*	*Introduction to path planning,*	*Types of underwater vehicles*
	SLO-2		*Derivation*	*Introduction to Visual Odometry and V-SLAM*	*Types, Challenges and Algorithms*	*Comparison*
S-9	SLO-1		*Go-goal controller*	*Multi-sensor combinations*	*D* Lite*	*Modelling of underwater dynamics*
	SLO-2		*Block diagram level understanding*	*Need and types*	*Numerical case study*	*Derivation*
S-10	SLO-1		*Cruise Controllers*		*Bug algorithms*	*Modelling of underwater vehicle*
	SLO-2		*Block diagram level understanding*		*Vector field histogram*	*Derivation*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to condition monitoring*	*Condition monitoring of electrical machines - Introduction*	*Condition monitoring in machine tool - Introduction*	*Condition monitoring techniques for hydraulic system – introduction*	*Case study 1: Fault detection on gearboxes operating under fluctuating load con*
	SLO-2	*Theory of condition monitoring*	*Construction of electrical machines*	*Types of cutting tool in lathe*	*Elements in hydraulic systems*	*Bearing Fault diagnosis in gear box*
S-2	SLO-1	*Stages of condition monitoring*	*Structure of electrical machines and types*	*Tool wear measurement techniques – Direct method*	*Pump supervision methods and fault detection techniques*	*Case study 2: Detection of rotor – Stator rubbing in rotating machinery using acoustic emissions*
	SLO-2	*Data used for condition monitoring – Time, model and frequency domain*	*Types of insulation ageing mechanism – Thermal and electrical ageing*	*Tool wear measurement techniques – Indirect method*	*Fault detection of centrifugal pumps with vibration sensors*	*Condition monitoring of very slowly rotating machinery using AE techniques*
S-3	SLO-1	*Data processing techniques for condition monitoring*	*Types of insulation ageing mechanism – Mechanical and environmental ageing*	*Types of machine tool failures*	*Types failures in reciprocating pump*	*Case study 3: Condition monitoring for a car engine*
	SLO-2	*Data acquisition system – filter, data logging system*	*Condition monitoring techniques: Visual monitoring.*	*Fault detection and diagnosis of machine tool*	*Fault diagnosis in reciprocating pumps*	*Application of vibration diagnostics and suppression in automobile*
S-4	SLO-1	*Condition monitoring methods – vibration analysis, Thermography*	*Failure modes in electrical machines – Stator core and rotor winding failure*	*Vision based tool condition monitoring system*	*Leak detection methods in fluid power pipe line*	*Case study 4; Condition monitoring of a hydraulic system using neural networks*
	SLO-2	*Condition monitoring methods – Oil Analysis, Performance analysis*	*Failure modes in electrical machines – Electrical connection and bearing failures*	*Decision making for sensor based tool condition monitoring system*	*Leak detection with mass balance for liquid pipe line*	*Multi-layer neural networks and pattern recognition for pump fault diagnosis*
S-5	SLO-1	*Instruments for condition monitoring – Displacement and velocity measurement*	*Electrical machines temperature monitoring*	*Online tool vibration monitoring system*	*Types of failures in fluid power linear actuators*	*Case study 5: Non-destructive fault induction in an electro-hydraulic servo system*
	SLO-2	*Instruments for condition monitoring – Force and noise measurement*	*Electrical machines wear debris monitoring*	*Online tool wear monitoring system*	*Fault detection and diagnosis of cylinder*	*Failure analysis and fault simulation of an electro hydraulic servo valve*
S-6	SLO-1	*Instruments for condition monitoring – Temperature measurement*	*Electrical machines lubrication oil monitoring*	*Introduction to grinding process and its types*	*Types of failures in pneumatic and hydraulic Directional control valves*	*Case study 6; Monitoring exhaust valve leaks in diesel engines*

	SLO-2	*Instruments for condition monitoring – current and Chemical composition measurement*	*Electrical machines vibration monitoring*	*Introduction to milling process and its types*	*Fault detection and diagnosis of pneumatic and hydraulic Directional control valves*	*Monitoring vibration in diesel engines*
S-7	SLO-1	*Laser based measurement systems for condition monitoring*	*Fault detection in electrical machines – stator winding fault detection*	*Acoustic Emission based Monitoring of Grinding Wheel Dressing*	*Fault detection and diagnosis of flow control valves with pneumatic position controller*	*Case study 7: Development of an automated fluorescent dye penetrant inspection system*
	SLO-2	*Ultrasonic sound based measurement systems for condition monitoring*	*Fault detection in electrical machines – Brush gear fault detection*	*Acoustic Emission based Monitoring of Face milling*	*Fault detection and diagnosis of flow control valves with electronic position controller*	*Application of vibration analysis to monitor wear in spur gear*
S-8	SLO-1	*Types of Maintenance – Preventive, operative and shutdown maintenance*	*Fault detection in electrical machines – rotor online fault detection*	*Diagnostics techniques for bearing condition monitoring in machine tool*	*Types of failures in electro pneumatic actuator*	*Case study 8: On-line acoustic viscometry in oil condition monitoring*
	SLO-2	*Condition based maintenance*	*Fault detection in electrical machines – rotor offline fault detection*	*Sensors and signal processing techniques for bearing condition monitoring system*	*Fault detection and diagnosis of electro pneumatic actuator*	*On-line vibration monitoring for detecting fan blade damage*
S-9	SLO-1	*Diagnostics process and Techniques*	*Discharge monitoring techniques – RF coupling method*	*Condition monitoring techniques for sheet metal process*	*Real time oil oxidation monitoring system*	*Case study 9: A case study of bearing condition monitoring using Shock pulse method*
	SLO-2	*Diagnostics process and Techniques*	*Discharge monitoring techniques – capacitive coupling method*	*Remote CNC machine control*	*Oil viscosity monitoring system*	*Remote online condition monitoring for wear measurement in bearing*

Course Code	18MHE423T	Course Name	FPGA BASED SYSTEM DESIGN	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	18MHC108J	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Introduce types of PLDs and their differing architectures*
CLR-2 :	*Discuss different software and hardware programming language, simulation tools*
CLR-3 :	*Gain knowledge about VHDL, its design flow and various description languages for Digital Logic Design*
CLR-4 :	*Design combinational logic, sequential logic and state machine using VHDL*
CLR-5 :	*Gain knowledge of VHDL design at system level and transformation of design developed in Matlab to VHDL*
CLR-6 :	*Introduce about PLDs and developing digital logic design using VHDL code for electronic system design*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	Learning 2 Expected Proficiency (%)	Learning 3 Expected Attainment (%)
CLO-1 :	*Acquire knowledge about various Programmable Logic Devices to design an electronic system*	*1*	*75*	*70*
CLO-2 :	*Understand programming languages to develop digital design for implementation either in processors or in PLDs*	*2*	*75*	*70*
CLO-3 :	*Utilize the various description languages for developing various digital logic design*	*2*	*75*	*70*
CLO-4 :	*Develop VHDL code for Combinational logic, sequential logic and state machine design*	*3*	*75*	*70*
CLO-5 :	*Translate algorithms and models developed in MATLAB Simulink into VHDL for implementing in PLD*	*3*	*75*	*70*
CLO-6 :	*Design and develop VHDL code for implementation of digital logic in PLDs*	*3*	*75*	*70*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to PLD's*	*Introduction to various software programming languages: C*	*Designing with Hardware description language*	*Introduction to combinational logic design*	*Digital to Analogue Conversion (DAC)*
	SLO-2	*Technology choices for digital circuit design*	*C++, Java*	*Various levels of design description*	*VHDL design for half adder*	*Digital to Analogue Conversion (DAC)*
S-2	SLO-1	*Electronic circuits: Analogue versus Digital*	*Introduction to various software programming languages: Visual Basics*	*Typical design flow using HDLs*	*Concept of multiplexer*	*VHDL Design for DAC*
	SLO-2	*Digital logic and its types*	*Scripting Languages, PHP*	*Typical design flow using HDLs*	*VHDL design for multiplexer*	*VHDL Design for DAC*
S-3	SLO-1	*Programmable Logic versus Digital Logic*	*Introduction to hardware programming languages*	*Design Entry Methods, HDL Design Entry*	*Concept of Encoder*	*Concept of Thyristor Gate Control*
	SLO-2	*Programmable Logic versus Processors*	*Types of hardware programming languages*	*Logic Synthesis with an example*	*VHDL design for Encoder*	*Concept of Thyristor Gate Control*
S-4	SLO-1	*Types of PLD: Simple Programmable Logic Device (SPLD)*	*VHDL hardware programming language*	*Entities, architectures, packages and configurations*	*Introduction to Sequential Logic Design*	*VHDL Design for Thyristor Gate Control*
	SLO-2	*Complex Programmable Logic Device (CPLD)*	*VHDL description for two input AND gate*	*Two input AND gate example*	*VHDL design for D-Latch*	*VHDL Design for Thyristor Gate Control*
S-5	SLO-1	*Field Programmable Gate Array (FPGA)*	*Verilog HDL hardware programming language*	*Key libraries and packages in HDL*	*Design of binary counter using VHDL*	*Model of DC Motor Control System*
	SLO-2	*FPGA design techniques and design constraints*	*Verilog HDL description for full adder*	*Various operators in VHDL*	*Design of binary counter using VHDL*	*Model of DC Motor Control System*
S-6	SLO-1	*PLD configuration technologies*	*Verilog-A hardware programming language*	*Dataflow description with example*	*Introduction to State Machine Design*	*Translation of DC motor Control system Design to VHDL*
	SLO-2	*PLD vendors*	*Verilog-A description for voltage amplifier*	*Dataflow description with example*	*Introduction to State Machine Design*	*Translation of DC motor Control system Design to VHDL*
S-7	SLO-1	*PLD design tools*	*System Verilog*	*Behavioral description with example*	*VHDL Design for Sequence Detector*	*Overview of Digital Filter Design*

	SLO-2	*Common basic features of design tools*	*Simulation Program with Integrated Circuit Emphasis (SPICE)*	*Behavioral description with example*	*VHDL Design for Sequence Detector*	*Overview of Digital Filter Design*
S-8	SLO-1	*Introduction to PLD design*	*Introduction to mathematical modeling*	*Structural description with example*	*VHDL design for UART receiver*	*Translation of Digital Filter Design to VHDL*
	SLO-2	*Typical PLD design flow*	*Various toolboxes for modeling different applications*	*Structural description with example*	*VHDL design for UART receiver*	*Translation of Digital Filter Design to VHDL*
S-9	SLO-1	*Technology Trends*	*Concept of Motor control system*	*Coding styles for VHDL*	*Testing of VHDL Design*	*Automation of Design translation to VHDL*
	SLO-2	*Technology Trends*	*Modeling of motor control system using Simulink*	*Coding styles for VHDL*	*Testing of VHDL Design*	*Automation of Design translation to VHDL*

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand and apply algorithm analysis technique*
CLR-2 :	*Describe computational solution to well known problems like searching, sorting etc.*
CLR-3 :	*Understand various approaches to solve greedy and dynamic algorithms*
CLR-4 :	*Utilize back tracking and branch and bound paradigms to solve exponential time problems*
CLR-5 :	*Analyze various algorithm design techniques to solve real time problems in polynomial time*
CLR-6 :	*Understand the limitations of Algorithmic power*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Design algorithms for various computing problems*	3	80	70	L	H	-	H	L	-	-	-	L	L	-	H	-	-	-
CLO-2 :	*Estimate the computational complexity of different algorithms*	3	85	75	M	H	L	M	L	-	-	-	M	L	-	H	-	-	-
CLO-3 :	*Critically analyze the different algorithm design techniques for a given problem*	3	75	70	M	H	M	H	L	-	-	-	M	L	-	H	-	-	-
CLO-4 :	*Modify existing algorithm to improve efficiency*	3	85	80	M	H	M	H	L	-	-	-	M	L	-	H	-	-	-
CLO-5 :	*Develop an algorithm using appropriate design strategies for problem solving*	3	85	75	H	H	M	H	L	-	-	-	M	L	-	H	-	-	-
CLO-6 :	*Create algorithms that are efficient in space and time complexities by using divide conquer, greedy, backtracking techniques*	3	80	70	L	H	M	H	L	-	-	-	L	L	-	H	-	-	-

		Introduction	Divide and conquer	Greedy Method	Dynamic Programming	Backtracking
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction: What is an Algorithm?*	*Divide and Conquer: General method*	*Greedy Method: General method*	*Dynamic Programming: General method*	*Backtracking: General method*
	SLO-2	*Algorithm Specification*	*Binary Search*	*Examples*	*Examples*	*N-Queens problem*
S-2	SLO-1	*Analysis Framework*	*Complexity of Binary search*	*Coin Change Problem*	*Multistage Graphs*	*Sum of subsets problem*
	SLO-2	*Performance Analysis: Space complexity*	*Recurrence equation for divide and conquer*	*Knapsack Problem using Greedy method*	*Graph algorithms*	*Graph coloring*
S-3	SLO-1	*Performance Analysis: Time complexity*	*Finding the maximum and minimum*	*Job sequencing with deadlines*	*Transitive Closure: All Pairs*	*Hamiltonian cycles*
	SLO-2	*Asymptotic Notations: Big-Oh notation (O)*	*Time complexity analysis-Examples*	*Minimum cost spanning trees*	*Dynamic programming-Longest ascending subsequence*	*Branch and Bound: Assignment Problem*
S-4	SLO-1	*Asymptotic Notations: Omega notation (Ω)*	*Algorithm for finding closest pair problem*	*Prim's Algorithm with example*	*Dynamic programming-Memorization*	*Travelling Sales Person problem-Backtracking*
	SLO-2	*Asymptotic Notations: Theta notation (Θ)*	*Merge sort algorithm*	*Kruskal's Algorithm*	*Dynamic programming-Matrix Multiplication*	*0/1Knapsack problem-Backtracking*
S-5	SLO-1	*Mathematical analysis of Non-Recursive Algorithms*	*Complexity Analysis of Merge sort*	*Example problem*	*Transitive Closure: Warshall's Algorithm*	*LC Branch and Bound solution*
	SLO-2	*Examples*	*Quick sort algorithm*	*Single source shortest paths: Dijkstra's Algorithm*	*Shortest Paths: Floyd's Algorithm*	*FIFO Branch and Bound solution*
S-6	SLO-1	*Mathematical analysis of recursive Algorithms*	*Complexity Analysis of Quick sort*	*Example problem*	*Floyd-Warshall Introduction*	*NP-Complete and NP-Hard problems: Basic concepts*
	SLO-2	*Examples*	*Best case, Worst case and Average case analysis*	*Optimal Tree problem: Huffman Trees*	*Floyd-Warshall with sample graph*	*On-deterministic algorithms*
S-7	SLO-1	*Important Problem Types: Sorting*	*Strassen's matrix multiplication*	*Optimal Tree problem: Huffman Codes*	*Floyd-Warshall complexity*	*P type problems*
	SLO-2	*Searching, String processing*	*Recurrence Relation*	*Transform and Conquer Approach: Heaps*	*Optimal Binary Search Trees*	*NP type problems*

S-8	SLO-1	*Graph Problems, Combinatorial Problems*	*Advantages of divide and conquer*	*Transform and Conquer Approach: Heap Sort*	*Knapsack problem using Dynamic method*	*NP-Complete Problems-Introduction*
	SLO-2	*Fundamental Data Structures: Stacks, Queues*	*Disadvantages of divide and conquer*	*Binomial Heaps*	*Bellman-Ford Algorithm*	*Satisfiability Problem*
S-9	SLO-1	*Graphs, Trees*	*Decrease and Conquer Approach*	*Fibonacci Heaps*	*Travelling Sales Person problem-Dynamic approach*	*NP-Hard classes*
	SLO-2	*Sets and Dictionaries.*	*Topological Sort*	*Examples of heaps and heap sort*	*Reliability design*	*Examples*

		Introduction	DFT and its applications	DSP Processor	ARM Cortex Processor	System Design – Case Study
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to Micro- controller based system design*	*Discrete Fourier Transform(DFT) and its properties*	*Introduction to DSP processors*	*Introduction to ARM processors*	*Comparison chart of various controllers*
	SLO-2	*Issues and challenges.*	*Signal conditioning system*	*Types of DSP processors*	*Types of ARM processor*	*Parameter selection of Controllers*
S-2	SLO-1	*Van-New-Mann architecture*	*Fast Fourier Transform(FFT) and its properties*	*Architecture: Block diagram of DSP processor TMS320C5X*	*Block diagram of ARM architecture*	*Analog to Digital conversion: Flash ADC*
	SLO-2	*Mechatronics design elements*	*Fast Fourier Transform(FFT) and its properties*	*Architecture DSP processor TMS320C5X*	*Block diagram of ARM architecture*	*Analog to Digital conversion: Successive approximation*
S-3	SLO-1	*Harvard architecture*	*DIT-FFT*	*Instruction set of DSP processor TMS320C5X*	*ARM organization : 3 stage*	*Digital to Analog conversion working principle*
	SLO-2	*Modified Harvard architecture*	*Problems based on DIT-FFT*	*Arithmetic Instructions*	*ARM organization : 5 stage*	*Types of DAC*
S-4	SLO-1	*RISC, CISC*	*DIF-FF*	*Logical instructions*	*ARM instruction set*	*Power convertors*
	SLO-2	*ASIP, Superscalar, VLIW*	*Problems based on DIF-FF*	*Load instructions*	*Data processing & Data transfer instructions*	*Power convertor applications*
S-5	SLO-1	*Superscalar architecture of Pentium*	*FIR Digital filter design*	*Multiply/Accumulate (MAC) operation*	*Multiply instruction*	*Power inverters*
	SLO-2	*Superscalar architecture of Pentium multicore processors*	*Problems based on FIR Digital filter design*	*Branching Instructions*	*Co processor instructions*	*Power inverter application*
S-6	SLO-1	*Types of Discrete time signals*	*IIR digital filter design*	*Compare, Select, and Store Unit (CSSU)*	*Addressing modes of ARM processor*	*Temperature sensors and its types*
	SLO-2	*Properties of Discrete time signals*	*Problems based on IIR digital filter design*	*Construction and operation of BLDC motor*	*Input and Output Modules, Mnemonics for programming*	*Temperature sensor applications*
S-7	SLO-1	*Principles of Digital Signal Processing (DSP)*	*Direct form-I structure for FIR and IIR systems*	*Addressing modes of DSP processor TMS320C5X*	*Thumb instruction set*	*Stepper motor control using DSP processor*
	SLO-2	*Sampling*	*Problems*	*Pressure control valve*	*Comparison of Thump and ARM instruction set*	*Stepper motor control using ARM processor*

S-8	SLO-1	*Convolution of discrete-time samples*	*Direct form-II structure for FIR and IIR systems*	*Writing optimized DSP codes*	*Writing optimized ARM codes*	*DC machine control using DSP processor*
	SLO-2	*Properties of Convolution*	*Problems*	*Writing optimized DSP codes*	*Writing optimized ARM codes*	*DC machine control using ARM processor*
S-9	SLO-1	*Correlation of discrete-time samples*	*Cascade structure for FIR and IIR systems*	*Simple programs using DSP codes*	*Basic ARM assembly language programs*	*AC machine control using DSP processor*
	SLO-2	*Properties of Correlation*	*Problems*	*Kinematic chains, Cams actuation with example, Gear trains with example*	*Basic ARM assembly language programs*	*AC machine control using ARM processor*

Course Code	18MHE426T	Course Name	ROBOT KINEMATICS AND DYNAMICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards		Nil	

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the complexity and method of solving inverse kinematics for an manipulator robot*
CLR-2 :	*Understand the concept of jacobian and singularity for manipulator*
CLR-3 :	*Understand and solve dynamics problem for the manipulator*
CLR-4 :	*Understand the various position and force control scheme and architecture*
CLR-5 :	*Understand the parallel configuration of robot*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Solve the inverse kinematics problem for the various configuration of serial manipulator*	2	80	70	H	H	L	L	-	-	-	-	-	-	L	H	H	M	-
CLO-2 :	*Compute the Jacobian matrix and singularity points for a manipulator robot*	2	80	70	H	H	L	M	-	-	-	-	M	L	-	H	H	M	-
CLO-3 :	*Compute the dynamic model of a serial manipulator*	2	80	70	H	H	L	M	-	-	-	-	M	-	-	H	H	M	-
CLO-4 :	*Understand the mathematical concept of various control schemes used for manipulator robots*	2	80	70	H	H	L	M	-	-	-	-	M	-	-	H	H	M	-
CLO-5 :	*Understand the parallel configuration of robot*	2	80	70	H	H	L	M	-	-	-	-	M	-	-	H	H	M	-

		Forward and Inverse Kinematics	Manipulator Jacobian and Singularity	Dynamics	Position and force control	Parallel Manipulator
Duration (hour)		8	10	10	10	7
S-1	SLO-1	*Forward Kinematics of 6 DOF articulated arm*	*Description/Notation for time varying position and orientation*	*Introduction to dynamics*	*Review of position control*	*Introduction to Parallel Manipulators*
	SLO-2	*Forward Kinematics of 6 DOF articulated arm*	*Example*	*Inertia, Centrifugal force, coriolis force etc*	*Control of Mass- spring damper system*	*Comparison with serial and parallel manipulator*
S-2	SLO-1	*Forward Kinematics of a Stanford Manipulator*	*Linear velocity vector for rigid bodies*	*Understanding dynamics of a simple system- mass spring damper system*	*Modelling of 1 DOF manipulator Joint*	*Various configuration of Parallel manipulator*
	SLO-2	*Forward Kinematics of a Stanford Manipulator*	*Angular velocity vector for rigid bodies*	*Inverse and forward dynamics*	*Deriving the mathematical model*	*Degree of freedom computation of parallel manipulator*
S-3	SLO-1	*Inverse Kinematics Introduction*	*Manipulator Jacobian*	*Lagrangian Formulation*	*Partitioned PD (PPD)control scheme*	*Forward and Inverse kinamtics of a parallel manipulator*
	SLO-2	*Issues in Inverse Kinematics*	*Importance of Jacobain matrix*	*Computing generalized torque/force through Lagrangian Euler method*	*Architecture and difference from PD control*	*Difficulty in forward kinematics*
S-4	SLO-1	*Algebraic and geometric method for RRR manipulator*	*Linear Velocity Jacobian*	*Dynamic model of a 2 R Planar manipulator using LE method*	*Introduction to force control*	*Inverse Kinematics of a planar parallel manipulator*
	SLO-2	*Algebraic and geometric method for RRR manipulator*	*Derivation for RR planar manipulator*	*Dynamic model of a 2 R Planar manipulator using LE method*	*Application of force control*	*Inverse Kinematics of a planar parallel manipulator*
S-5	SLO-1	*Inverse Kinematics Computation- Closed loop solution*	*Linear and angular velocity Jacobian Computation*	*Newton Euler Formulation*	*Frame work for force /position control scheme*	*Inverse Kinematics of a spatial parallel manipulator*
	SLO-2	*Case study- spherical wrist*	*Linear and angular velocity Jacobian Computation*	*Computing generalized torque/force through Newton Euler method*	*Define- Artificial and natural constraints*	*Inverse Kinematics of a spatial parallel manipulator*
S-6	SLO-1	*Inverse kinematics of articulated arm (3 DOF)*	*Concept of Singularity*	*Dynamic model of a 2 R Planar manipulator using LE method*	*Case study to define artificial and natural constraint*	*Velocity analysis*
	SLO-2	*Inverse kinematics of articulated arm (3 DOF)*	*Types and Consequences*	*Dynamic model of a 2 R Planar manipulator using LE method*	*Case study to define artificial and natural constraint*	*Jacobian computation*

S-7	SLO-1	*Inverse kinematics of Stanford manipulator*	*Singularity Computation using Jacobian*	*Dynamic model of a inverted pendulum*	*Description of force control task*	*Workspace analysis*
	SLO-2	*Inverse kinematics of Stanford manipulator*	*Example using RR Manipulator*	*Dynamic model of a inverted pendulum*	*Example- Peg in hole assembly*	*Example*
S-8	SLO-1	*Computation consideration for inverse kinematics*	*Jacobian Computation for RPY wrist*	*Dynamic model of a SCARA robot*	*Force control of mass spring system*	
	SLO-2	*Example*	*Singularity Computation for RPY wrist*	*Dynamic model of a SCARA robot*	*Force control of mass spring system*	
S-9	SLO-1		*Jacobian Computation for articulated arm*	*Static Forces in manipulator*	*Dynamics based control*	
	SLO-2		*Singularity Computation for articulated arm*	*Static Forces in manipulator- Example*	*General dynamics representation*	
S-10	SLO-1		*Work space Analysis*	*Jacobian in force domain*	*Computed torque control*	
	SLO-2		*Work space Analysis*	*Derivation- Static force computation of a planar RR manipulator*	*Architecture*

		Introduction to Robotics	Transformations	Manipulator Kinematics	Introduction to sensors and actuators in robotics	Trajectory planning and work cell
Duration (hour)		9	12	11	8	8
S-1	SLO-1	*Introduction to Robotics- History, laws of robotics*	*Review of Vectors*	*Introduction to kinematics*	*Basic Actuators*	*Types of Robot control*
	SLO-2	*Classification based on application*	*Vector representation of points and bodies*	*Forward and inverse kinematics*	*Selection of actuators*	*Cartesian and joint space scheme trajectory planning*
S-2	SLO-1	*Definition of work volume*	*Translation-numerical problem*	*Geometric and algebraic approach*	*Transmission elements*	*Force control*
	SLO-2	*Classification based on work volume*	*Rotation-numerical problem solving*	*Forward kinematics of RR,RRR planar manipulator using geometric approach*	*Selection*	*Case study- Mass Spring system*
S-3	SLO-1	*Precision, repeatability, accuracy in terms of robotics*	*Representing rotation- rotation matrix*	*Geometric approach for RRP spatial manipulator*	*Harmonic drives*	*Position Control*
	SLO-2	*Co ordinate systems and Degree of freedom*	*Numerical problem solving*	*Comparison of geometric and algebraic approach*	*Advantage of harmonic drives over other transmission elements*	*Case Study- 1 DOF joint model*
S-4	SLO-1	*Various joints in robot, links*	*Representing Rotation- Euler angles*	*D-H formulation for manipulator kinematics*	*Force sensors – Importance and types, working Principle*	*Hybrid force position control*
	SLO-2	*Configuration and operational space*	*Numerical problem solving*	*D-H formulation for manipulator kinematics*	*Maltese Cross Configuration*	*Case study*
S-5	SLO-1	*Anatomy of robot and wrist configuration*	*Representing Rotation- Equivalent axis representation*	*Difference between standard and modified DH convention*	*Tactile sensor- Importance and use*	*Robot Cell Layout*
	SLO-2	*Example*	*Numerical problem solving*	*Example – kinematics of RR planar manipulator using both convention*	*Tactile sensor- Various type and its working*	*Robot Cell Layout*
S-6	SLO-1	*Robot end effectors*	*Difference between current axis and fixed axis representation*	*Forward kinematics of 3 DOF RRP manipulator*	*Slip sensor- Importance and use*	*Safety Monitoring*
	SLO-2	*Various Types*	*Numerical problem solving*	*Forward kinematics of 3 DOF RRP manipulator*	*Slip sensor- Various type and its working*	*Error Detection and Recovery*

S-7	SLO-1	*Gripper type*	*Homogeneous transformation*	*Forward kinematics of 3 DOF RRR spatial manipulator*	*Vision system for robot*	*Robot cycle time analysis*
	SLO-2	*Design of mechanical gripper and grasping*	*Numerical problem solving*	*Forward kinematics of 3 DOF RRR spatial manipulator*	*Architecture*	*Robot cycle time analysis*
S-8	SLO-1	*Various gripper in robot*	*Operators and mapping concept*	*Forward Kinematics of RPY wrist*	*Case study on vision system*	*Economic analysis of robot*
	SLO-2	*Selection criteria*	*Case study- numerical problem solving*	*Forward Kinematics of RPY wrist*	*Case study on vision system*	*Economic analysis of robot*
S-9	SLO-1	*Interpreting various data in the the robot data sheet*	*Compound Transformation*	*Forward kinematics of 4DOF SCARA robot*		
	SLO-2	*Interpreting various data in the the robot data sheet*	*Case Study*	*Forward kinematics of 4DOF SCARA robot*		
S-10	SLO-1		*Operators and mapping concept*	*Introduction to inverse kinematics*		
	SLO-2		*Case study- numerical*	*Inverse kinematics of RR planar manipulator- geometric approach*		
S-11	SLO-1		*Compound transformation*	*Issues in inverse kinematics*		
	SLO-2		*Case study*	*Issues in inverse kinematics*		
S-12	SLO-1		*Case study of transformations in robotics*			
	SLO-2		*Case study of transformations in robotics*

CLO-5 :	*Understand the parallel configuration of robot*	*2*	*80*	*70*	*H*	*H*	*M*	*H*	*M*	-	-	-	*M*	-	-	*H*	*H*	-	-
CLO-6 :	*Get conversant with overall challenges involved in manipulators*	*2*	*80*	*70*	*H*	*H*	*M*	*H*	*M*	-	-	-	*M*	-	-	*H*	*H*	-	-

		Manipulator Kinematics	Velocity Analysis	Singularity and Workspace analysis	Dynamic Modelling	Parallel Manipulator
Duration (hour)		9	11	10	8	7
S-1	SLO-1	*Forward kinematics of 6 DOF articulated arm*	*Description/Notation for time varying position and orientation*	*Concept of Singularity*	*Introduction to dynamics*	*Introduction to parallel manipulators*
	SLO-2	*Forward kinematics of 6 DOF articulated arm*	*Example*	*Types and consequences*	*Inertia, centrifugal force, coriolis force etc*	*Comparison with serial and parallel manipulator*
S-2	SLO-1	*Forward kinematics of a Stanford Manipulator*	*Linear velocity vector for rigid bodies*	*Singularity computation using Jacobian*	*Understanding dynamics of a simple system- mass spring damper system*	*Various configuration of parallel manipulator*
	SLO-2	*Forward kinematics of a Stanford Manipulator*	*Angular velocity vector for rigid bodies*	*Example using RR Manipulator*	*Inverse and forward dynamics*	*Degree of freedom computation of parallel manipulator*
S-3	SLO-1	*Inverse kinematics Introduction*	*Manipulator Jacobian*	*Singularity computation of RPY wrist*	*Lagrangian formulation*	*Forward and inverse kinematics of a parallel manipulator*
	SLO-2	*Issues in inverse kinematics*	*Importance of Jacobain matrix*	*Singularity computation of RPY wrist*	*Computing generalized torque/force through Lagrangian-Euler (LE) method*	*Challenges in forward kinematics*
S-4	SLO-1	*Algebraic and geometric method for RRR manipulator*	*Linear velocity Jacobian*	*Singularity computation of 6 DOF articulated arm*	*Dynamic model of a RR Planar manipulator using LE method*	*Inverse Kinematics of a planar parallel manipulator*
	SLO-2	*Algebraic and geometric method for RRR manipulator*	*Derivation for RR planar manipulator*	*Singularity computation of 6 DOF articulated arm*	*Dynamic model of a RR Planar manipulator using LE method*	*Inverse Kinematics of a planar parallel manipulator*
S-5	SLO-1	*Inverse kinematics Computation- Closed loop solution*	*Linear and angular velocity Jacobian computation*	*Work space analysis*	*Newton-Euler Formulation*	*Inverse Kinematics of a spatial parallel manipulator*
	SLO-2	*Case study- spherical wrist*	*Linear and angular velocity Jacobian computation*	*Work space analysis*	*Computing generalized torque/force through Newton Euler method*	*Inverse Kinematics of a spatial parallel manipulator*
S-6	SLO-1	*Inverse kinematics of articulated arm (6 DOF)*	*Jacobian Computation for RPY wrist*	*Introduction to Trajectory Planning*	*Dynamic model of a RR Planar manipulator using LE method*	*Velocity analysis*

	SLO-2	*Inverse kinematics of articulated arm (6 DOF)*	*Jacobian computation for RPY wrist*	*Joint space and Cartesian space*	*Dynamic model of a RR Planar manipulator using LE method*	*Jacobian computation*
S-7	SLO-1	*Inverse kinematics of Stanford manipulator*	*Jacobian computation for articulated arm*	*Joint space trajectory planning*	*Dynamic model of a inverted pendulum*	*Workspace analysis*
	SLO-2	*Inverse kinematics of Stanford manipulator*	*Jacobian computation for articulated arm*	*Example of cubic polynomial*	*Dynamic model of a inverted pendulum*	*Example*
S-8	SLO-1	*Computation consideration for inverse kinematics*	*Static forces in manipulator*	*Joint space trajectory planning via points*	*Dynamic model of a SCARA robot*	
	SLO-2	*Example*	*Static forces in manipulator- Example*	*Cubic polynomial via points*	*Dynamic model of a SCARA robot*	
S-9	SLO-1	*Forward and Inverse Kinematics in robot control*	*Jacobian in force domain*	*Cartesian space trajectory planning*		
	SLO-2	*Example*	*Derivation*	*Case study*		
S-10	SLO-1		*Static force computation of a planar RR manipulator*	*Problem in Cartesian space planning*		
	SLO-2		*Static force computation of a planar RR manipulator*	*Example*		
S-11	SLO-1		*Cartesian transformation of velocities and forces*			
	SLO-2		*Example*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	18MHE510T - Planning and Decision Making in Robotics
Course Offering Department	Mechatronics Engineering	Data Book / Codes / Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Formulate the challenges in developing autonomous mobile robots*
CLR-2 :	*Abstract kinematic control of wheeled mobile robots*
CLR-3 :	*Understand the challenges involved in sensory perception for mobile robots*
CLR-4 :	*Understand the mechanics of legged robots for locomotion*
CLR-5 :	*Comprehend the challenges and configurations of aerial and underwater mobile robots*
CLR-6 :	*Build the foundations of mobile robots in various modalities*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)
CLO-1 :	*Appreciate the various problems to be addressed in autonomous mobile robots*	3	80	75
CLO-2 :	*Understand the various types and configurations of wheeled and legged mobile robots*	3	80	75
CLO-3 :	*Formulate the kinematics of wheeled and legged mobile robots of popular configurations*	2	70	65
CLO-4 :	*Build the dynamic model of multi-rotor aerial and underwater robots*	2	75	70
CLO-5 :	*Understand the issues in interpreting proprioceptive and exteroceptive sensory data on-board mobile robots*	2	85	80
CLO-6 :	*Build the required foundation for developing autonomous mobile robots.*	2	80	75

		Introduction	Kinematics and Control of Mobile Robots	Sensors for Mobile Robots	Legged Robots	Aerial and Underwater Robots
Duration (hour)		6	10	10	9	10
S-1	SLO-1	*Mobile robots vs. manipulators*	*Kinematic constraints of a fixed standard wheel*	*Sensors for mobile robots*	*Introduction to limbed systems*	*Non-ground modality*
	SLO-2	*Introduction to autonomous mobile robots*	*Derivation*	*Definitions, classification*	*Comparison with wheeled systems*	*Case studies*
S-2	SLO-1	*Locomotion aspects of mobile robots*	*Kinematic constraints of a omni-directional wheel*	*Characteristics applicable to mobile robots*	*Configurations of limbed systems*	*Aerial robots*
	SLO-2	*Locomotion aspects of mobile robots*	*Derivation*	*Characteristics applicable to mobile robots*	*Case studies*	*Types and comparison*
S-3	SLO-1	*Introduction to wheeled mobile robots*	*Forward kinematic of three wheeled differential drive robot*	*Physical and computational attributes of sensors applicable to mobile robots*	*Conceptual design of limbed systems*	*Multi-rotor aerial robot*
	SLO-2	*Wheel types*	*Derivation*	*Sensor noise and sensor aliasing*	*Design issues*	*Types and applications*
S-4	SLO-1	*Wheeled configurations*	*Forward kinematics of a three wheeled omni-directional robot*	*GPS and heading sensors*	*Kinematics of quad-limbed configuration*	*Quadrotor aerial robot*
	SLO-2	*Two, three, four, five and six wheeled*	*Derivation*	*Principles, challenges and interpretation*	*Derivation*	*Modelling of dynamics*
S-5	SLO-1	*Maneuverability, controllability*	*Degree of freedom, differential degrees of freedom,*	*Light and sound based ranging*	*Control strategy*	*Modelling of flight controller*
	SLO-2	*Stability of mobile robots*	*Holonomic and non-holonomic constraints, degree of maneuverability*	*Principles, challenges and interpretation*	*Model of control algorithm for legged robot*	*Derivation*
S-6	SLO-1	*Wheeled locomotion*	*Mobility analysis of various wheeled configurations*	*Wheel odometry*	*Design of biped configuration*	*Commercial flight controllers*
	SLO-2	*Case studies*	*Mobility analysis of various wheeled configurations*	*Algorithm*	*Kinematics of a biped configuration*	*Specifications and selection criteria*
S-7	SLO-1		*Workspace and trajectory considerations*	*Wheel odometry critical analysis*	*Design case study of a complete humanoid*	*Underwater vehicles*

	SLO-2		*Comparison*	*Wheel odometry error reduction*	*Considerations and challenges*	*Foundations topics and challenges*
S-8	SLO-1		*State space modelling of three wheeled differential drive robot*	*Vision for mobile robots*	*Mechanical system design*	*Types of underwater vehicles*
	SLO-2		*Derivation*	*Techniques and purpose*	*Case study*	*Comparison*
S-9	SLO-1		*Go-goal controller*	*Multi-sensor combinations*	*Electrical system design*	*Modelling of underwater dynamics*
	SLO-2		*Block diagram level model*	*Need and types*	*Case study*	*Derivation*
S- 10	SLO-1		*Cruise controllers*	*Sensor fusion algorithms*		*Modelling of underwater vehicle*
	SLO-2		*Block diagram level model*	*Types and selection*		*Derivation*

		Introduction to Position control	Introduction to Force control	Force/Position Control	Introduction to non linear control	Introduction to ROS
Duration (hour)		10	11	12	6	6
S-1	SLO-1	*Review of position control*	*Introduction to force control*	*Introduction to hybrid force position control problem*	*Introduction to nonlinear and time varying systems*	*Robot language classification*
	SLO-2	*Mass- spring damper system*	*Application of force control*	*Example*	*General representation*	*Programming methods: Lead through method, teach pendent method*
S-2	SLO-1	*Various linear control schemes*	*Frame work for force control scheme*	*Hybrid force/position control architecture*	*Control problem for manipulator*	*Syntax features and applications of various programming languages*
	SLO-2	*Characteristics of linear control*	*Define- Artificial and natural constraints*	*Example*	*Practical considerations*	*Examples*
S-3	SLO-1	*Position control of second order system*	*Case study to define artificial and natural constraint*	*Selection matrices*	*Ulyanovsk stability analysis*	*Inter locking commands*
	SLO-2	*PI implementation*	*Case study to define artificial and natural constraint*	*Case study to describe selection matrices*	*Example*	*Safety features*
S-4	SLO-1	*Position control of second order system*	*Description of force control task*	*Case study for hybrid force position control scheme*	*Introduction to nonlinear controllers*	*Introduction to Robot Operating System (ROS)*
	SLO-2	*PD implementation*	*Example- Peg in hole assembly*	*Case study for hybrid force position control scheme*	*Description of fuzzy based control*	*ROS examples*
S-5	SLO-1	*Position control of second order system*	*Force control of mass spring system*	*Trajectory control*	*Case study for fuzzy based control*	*Introduction to programming using ROS Industrial ROS*
	SLO-2	*PID implementation*	*Force control of mass spring system*	*Cartesian and joint space control*	*Use of Lyapunov criteria to understand stability*	*ROS examples*
S-6	SLO-1	*Modelling of 1 DOF manipulator Joint*	*Dynamics based control*	*Cubic polynomial trajectories*	*Introduction to sliding mode control*	*Programming for point to point /continuous Operations*

	SLO-2	*Deriving the mathematical model*	*General dynamics representation*	*Derivation*	*Example*	*Case Study*
S-7	SLO-1	*Partitioned PD (PPD)control scheme*	*Computed torque control*	*Point o point motion without via points*		
	SLO-2	*Architecture and difference from PD control*	*Architecture*	*Derivation*		
S-8	SLO-1	*Application of partitioned PD control scheme to 1 DOF manipulator joint*	*Impedance force/toque control*	*Point to point motion with via points*		
	SLO-2	*Analysis*	*Example*	*Derivation*		
S-9	SLO-1	*Modeling the PPD with external disturbance*	*Force tracking characteristics of impedance control*	*Linear function with parabolic blend*		
	SLO-2	*Architecture with external disturbance*	*Example of manipulator interaction with environment*	*Linear function with parabolic blend - example*		
S-10	SLO-1	*Partitioned PID control scheme*	*Passive compliance*	*Cartesian space techniques*		
	SLO-2	*Architecture*	*Example*	*Description of path - example*		
S-11	SLO-1		*Active compliance*	*Defining straight line path*		
	SLO-2		*Compliance through softening position gain*	*Derivation*		
S-12	SLO-1			*Implementation method*		
	SLO-2			*Implementation example*

		Introduction	Vision Hardware	Image Processing	Image Analysis	3-D Vision
Duration (hour)		8	9	10	9	9
S-1	SLO-1	*Introduction to Vision*	*Scene constraints*	*Vision software basics*	*Feature extraction*	*Introduction to the multi-view geometry*
	SLO-2	*Terminologies of fields*	*Fundamentals of lighting*	*Types and selection*	*Region features and classification - types*	*Scene reconstruction and motion estimation problem*
S-2	SLO-1	*Comparison of biological and computer vision*	*Light sources*	*Basics of digital image*	*Key point features*	*Geometry of a stereo vision system*
	SLO-2	*Specifications and limitations*	*Types, selection criteria*	*Sampling, quantization effects*	*Applications*	*Correspondence problem*
S-3	SLO-1	*Projective geometry*	*Lighting techniques*	*Point operations*	*Corner detection*	*Epipolar geometry*
	SLO-2	*Basics*	*Types and selection criteria*	*2-D convolution*	*Harris corner detection*	*Estimation of fundamental and essential matrix*
S-4	SLO-1	*Modelling of geometric image formation*	*Lenses, specifications*	*Image smoothing in spatial domain*	*Critical analysis of Harris corner detection*	*Epipolar constraint*
	SLO-2	*Derivation*	*Optical filters, specifications*	*Image sharpening and edge detection in spatial domain*	*Limitations and motivation for going beyond corner detection*	*Applications of epipolar constraint*
S-5	SLO-1	*Modelling of camera distortion and artifacts*	*Image sensors*	*Discrete Fourier Transform (DFT)*	*Key point descriptors*	*Application of epipolar constraint in image stitching*
	SLO-2	*Derivation*	*Specifications*	*Frequency domain filtering basics*	*Motivation and applications*	*Implementation details*
S-6	SLO-1	*Camera calibration*	*CCD sensor specifications*	*Smoothing sharpening in frequency domain*	*Scale Invariant Feature Transform (SIFT) key point descriptor*	*Epipolar rectification*

	SLO-2	*Methods of camera calibration*	*CMOS sensor specifications*	*Smoothing sharpening in frequency domain*	*Scale space construction and difference of Gaussian*	*Metric reconstruction*
S-7	SLO-1	*Estimation of projection matrix*	*Comparison of CCD and CMOS*	*Morphological image processing*	*Filtering of low contrast features*	*Non-metrical reconstruction types*
	SLO-2	*Derivation*	*Advanced sensor technologies*	*Erosion, dilation, opening and closing*	*SIFT descriptor*	*Multi-view stereo vision*
S-8	SLO-1	*Experimental performance assessment in computer vision*	*Camera computer interfaces*	*Color image processing motivation*	*Matching algorithms*	*Issues and challenges*
	SLO-2	*Metrics and example usage*	*Types and selection*	*HSI space color image processing*	*Gray-level and correlation based matching*	*Applications of stereo vision*
S-9	SLO-1		*Application case studies*	*Application case studies*	*Descriptor based matching*	*Visual odometry case study*
	SLO-2		*Hardware selection exercise*	*Image smoothing and sharpening*	*Implementation details*	*Application in driverless cars*
S-10	SLO-1			*Application case studies*		
	SLO-2			*Morphology and colour processing*

Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*To understand the various active methods of reconstruction techniques*
CLR-2 :	*To comprehend various segmentation techniques used in computer vision tasks*
CLR-3 :	*The understand various recognition*
CLR-4 :	*To get introduced to classical neural networks and machine learning basics*
CLR-5 :	*To understand deep learning techniques for computer vision tasks*
CLR-6 :	*Application specific deep learning networks*

		Learning			Program Learning Outcomes (PLO)

		Shape From Focus and Active Methods	Segmentation	Recognition	Deep Learning	Augmented Reality and Mixed Reality
Duration (hour)		8	10	7	10	10
S-1	SLO-1	*Modelling image focus*	*Introduction to segmentation*	*Introduction to recognition*	*Convolutional neural networks*	*The Reality–Virtuality continuum*
	SLO-2	*Modelling image focus*	*Types*	*Challenges and approaches*	*Convolution, pooling*	*The Reality–Virtuality continuum*
S-2	SLO-1	*Shape from focus*	*Introduction to clustering*	*K-nearest neighbor algorithm*	*Activation functions, initialization*	*Virtual, augmented and mixed reality, an historical perspective*
	SLO-2	*Principle and hardware required*	*Methods relevant to computer vision*	*Principle and underlying mathematics*	*Dropout, batch normalization*	*Industrial applicability of virtual, augmented and mixed reality*
S-3	SLO-1	*Focus measures*	*Agglomerative clustering*	*Numerical problem solving for a sample recognition using K-nearest*	*Deep learning hardware*	*Design and implementation of an immersive user experience*
	SLO-2	*Scene reconstruction*	*Principle and underlying mathematics*	*Numerical problem solving for a sample recognition using K-nearest*	*CPU, GPU, TPU*	*Design and implementation of an immersive user experience*
S-4	SLO-1	*Active methods*	*Numerical problem on agglomerative clustering*	*Principal Component Analysis (PCA)*	*Tuning neural networks*	*The VR-AR-MR system architecture*
	SLO-2	*Comparison with passive techniques*	*Numerical problem on agglomerative clustering*	*Principle and underlying mathematics*	*Best practices*	*The VR-AR-MR system architecture*
S-5	SLO-1	*Laser triangulation*	*K-means clustering*	*Numerical problem solving for a sample recognition using PCA*	*Training neural networks*	*Tracking system*
	SLO-2	*Principle, working and specifications*	*Principle and underlying mathematics*	*Numerical problem solving for a sample recognition using PCA*	*Update rules, ensembles*	*Tracking system*
S-6	SLO-1	*Structured light reconstruction*	*Numerical problem on agglomerative clustering*	*Linear Discriminant Analysis (LDA)*	*Data augmentation*	*Visual, aural, and haptic display*

	SLO-2	*Principle, working and specifications*	*Numerical problem on agglomerative clustering*	*Principle and underlying mathematics*	*Transfer learning*	*Design principles*
S-7	SLO-1	*LIDAR*	*Mean-shift clustering*	*Numerical problem solving for a sample recognition using LDA*	*Popular CNN architectures For image classification*	*Usability guidelines*
	SLO-2	*Principle, working and specifications*	*Principle and underlying mathematics*	*Numerical problem solving for a sample recognition using LDA*	*Challenges addressed and novelty*	*Usability guidelines*
S-8	SLO-1	*Application case studies of active methods*	*Numerical problem on agglomerative clustering*		*Popular CNN architectures for object detection*	*Common Interaction Techniques for Mixed Reality*
	SLO-2	*Application case studies of active methods*	*Numerical problem on agglomerative clustering*		*Challenges addressed and novelty*	*Common Navigation Techniques*
S-9	SLO-1		*Introduction to classification*		*Applications of deep learning - semantic segmentation*	*Interaction design process*
	SLO-2		*Types, applications*		*Applications of deep learning or instance segmentation*	*Interaction design process*
S-10	SLO-1		*Linear classifiers*		*Applications of deep learning - activity understanding*	*Future of computer computer vision*
	SLO-2		*Implementation details*		*Types*	*Open problems*

Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*To understand how computer vision aids in manipulator's guidance*
CLR-2 :	*To understand how computer vision aids in mobile robot's guidance*
CLR-3 :	*To get awareness about visual servoing techniques*
CLR-4 :	*To get awareness about visual slam and visual odometry*
CLR-5 :	*To gain knowledge about optical flow methods and their applications*
CLR-6 :	*To get to knwo about the advanced approaches in visual servoing*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)
CLO-1 :	*To be able to appreciate the various roles of computer vision in manipulator and mobile robotics*	*3*	*80*	*75*
CLO-2 :	*To be able to comprehend the basics mathematics of visual servoing architectures*	*3*	*85*	*80*
CLO-3 :	*To be able to appreciate the applications of computer vision for mobile robotics*	*2*	*70*	*65*
CLO-4 :	*To be able to implement optical flow methods to understand motion related features from images*	*2*	*75*	*70*
CLO-5 :	*To have the competency in developing tracking algorithms based on vision data*	*2*	*85*	*80*
CLO-6 :	*To be conversant in the futuristic approaches in visual servoing*	*2*	*80*	*75*

		Introduction	Visual Servoing	Vision for Mobile Robots	Optical Flow and Tracking	Advanced Topics
Duration (hour)		8	10	10	10	7
S-1	SLO-1	*Introduction to vision for Robotics*	*Mathematical formulation of visual servo problem*	*Introduction to simultaneous localization and mapping*	*Formulation of the motion analysis*	*Hybrid visual servoing, partitioned visual servoing*
	SLO-2	*Significance of vision as a external state sensing technology*	*Derivation*	*Visual SLAM (VSLAM)*	*Formulation of the motion analysis*	*Switching schemes in visual servoing*
S-2	SLO-1	*Vision for manipulators*	*Classification of visual servoing architectures*	*VSLAM Basics*	*Motion field of rigid objects*	*Joint space control of eye-in-hand*
	SLO-2	*Vision for mobile robots*	*Classification of visual servoing architectures*	*VSLAM Basics*	*Aperture problem*	*Joint space control of eye-in-hand*
S-3	SLO-1	*Modelling velocity of a rigid object*	*Image based visual servoing (IBVS)*	*VSLAM approaches*	*Optical flow*	*Joint space control of eye-to-hand systems*
	SLO-2	*Derivation*	*Interaction matrix derivation*	*VSLAM approaches*	*Motion field*	*Joint space control of eye-to-hand systems*
S-4	SLO-1	*Camera configurations in vision guided robots*	*Geometrical interpretation of IBVS*	*Introduction to visual odometry (VO)*	*Brightness constancy equation*	*Motion based segmentation*
	SLO-2	*Camera configurations in vision guided robots*	*Derivation*	*Introduction to visual odometry (VO)*	*Validity*	*Motion based segmentation*
S-5	SLO-1	*Triangulation*	*Stability analysis*	*VO - motion from image feature correspondences*	*Estimating motion field - differential techniques*	*Structure from motion (SFM)*
	SLO-2	*Derivation*	*Stability analysis*	*VO - motion from image feature correspondences*	*Estimating motion field - differential techniques*	*Multi-view SFM*

S-6	SLO-1	*Basic equation of triangulation*	*IBVS with stereo vision system – a case study*	*VO – motion from 3-D structure*	*Estimating motion field - feature based techniques*	*Retrieving 3-D structure*
	SLO-2	*Derivation*	*IBVS with stereo vision system – a case study*	*VO – motion from 3-D structure*	*Estimating motion field - feature based techniques*	*Retrieving 3-D structure*
S-7	SLO-1	*Vision based pose estimation*	*IBVS with other geometrical features*	*Comparison between VSLAM techniques*	*Target tracking*	*Motion from motion field*
	SLO-2	*Detailed description of any one approach*	*Direct estimation*	*VO calibration techniques*	*Challenges and solutions*	*Motion from motion field*
S-8	SLO-1		*Position based visual servoing*	*Application case study on VSLAM*	*Kalman filtering basics*	
	SLO-2		*Point feature based motion*	*Application case study on VSLAM*	*Kalman filtering basics*	
S-9	SLO-1		*Pose based motion*	*Application case study on VSLAM*	*Kalman tracking*	
	SLO-2		*Pose based motion*	*Application case study on VSLAM*	*Kalman tracking*	
S-10	SLO-1		*Calibration for visual servoing systems*	*Application case study on VO*	*Application case study on visual tracking*	
	SLO-2		*Calibration for visual servoing systems*	*Application case study on VO*	*Application case study on visual tracking*

Course Code	18MHE508T	Course Name	ADVANCED ROBOTICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	15MHE501T - Robotics	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Learn the concepts of singularity, statics and to compute dynamics of complex configuration*
CLR-2 :	*Understand the concepts and challenges involved in multirobot systems*
CLR-3 :	*Understand modeling of flexible robots*
CLR-4 :	*Learn the complexities of wheeled mobile robot in uneven terrain*
CLR-5 :	*Introduce the advanced concepts of robotics like coorperative robot, haptics and telerobotic systems*
CLR-6 :	*get an understanding about the current state of the art research topics in robotics*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Understand the approaches to solve for singularity and dynamics of manipulator*	2	80	70	H	M	M	H	M	-	-	-	-	-	-	H	H	-	-
CLO-2 :	*Learn the concept of multirobot systems and its research challenges*	2	80	70	H	H	M	H	M	-	-	-	-	-	-	H	H	-	-
CLO-3 :	*Understand the modeling and control of flexible robots*	2	80	70	H	H	M	H	M	-	-	-	H	-	-	H	H	-	-
CLO-4 :	*Understand mathematical concepts of defining the wheeled mobile robot in uneven terrain*	2	80	70	H	H	H	H	M	-	-	-	M	-	-	H	H	-	-
CLO-5 :	*Learn the importance and complexities of coorperative robot, haptics and telerobotic systems*	2	80	70	H	H	M	H	M	-	-	-	M	-	-	H	H	-	-
CLO-6 :	*Ability to address current advanced topics of research in the field of robotics*	2	80	70	H	H	M	H	M	-	-	-	M	-	-	H	H	-	-

		Manipulator Robots	Multi Robot Systems	Modelling and control of flexible robots	Wheeled Mobile Robot	Advanced Topics
Duration (hour)		8	7	10	8	12
S-1	SLO-1	*Jacobian for serial manipulator*	*Architecture of multirobot systems*	*Introduction to flexible robots*	*Introduction to wheeled mobile robot (WMR)*	*Introduction to cooperative manipulators*
	SLO-2	*Numerical*	*History and application*	*Application*	*Two and three wheeled WMR on flat surfaces*	*Historical overview*
S-2	SLO-1	*Jacobian for parallel Manipulators*	*Communication*	*Models of flexible Links*	*Concepts of slip*	*Introduction to kinematics and statics*
	SLO-2	*Numerical*	*Example*	*Numerical*	*Slip Modelling*	*Example*
S-3	SLO-1	*Singularity analysis*	*Introduction to swarm robots*	*Models of flexible Joints*	*World and terrain models for natural environment*	*Dynamics and load distribution*
	SLO-2	*Loss and gain of degree of freedom*	*Example*	*Numerical*	*Model*	*Example*
S-4	SLO-1	*Statics and force transformation matrix for Stewart Gough platform*	*Heterogeneity*	*Kinematic Modelling of multilink flexible robots*	*Dynamic environments*	*Control of cooperative manipulator*
	SLO-2	*Derivation*	*Heterogeneity*	*Numerical*	*Example*	*Example*
S-5	SLO-1	*Singularity analysis of Stewart Gough platform*	*Task allocation and learning*	*Kinematic modelling of multilink flexible robots*	*WMR on uneven terrain*	*Overview of haptics*
	SLO-2	*Numerical Analysis*	*Case study*	*Numerical*	*Example*	*Importance*
S-6	SLO-1	*Introduction to recursive dynamics*	*Control challenges*	*Introduction to dynamics of flexible link manipulator*	*Design of slip free motion on uneven terrain*	*Haptic device design*
	SLO-2	*Numerical procedure*	*Communication for control of networked robots*	*Notations and terms*	*Design*	*Example*
S-7	SLO-1	*Dynamics of Stewart Gough platform*	*Communication for perception*	*Dynamic computation*	*Dynamics and static stability of three wheeled WMR on uneven terrain*	*Haptic rendering*

	SLO-2	*Numerical*	*Control for perception*	*Numerical*	*Numerical analysis*	
S-8	SLO-1	*Simulation and experimental case study on control of parallel manipulator*		*Control of flexible link manipulator*	*Case study of wheeled mobile robot on uneven terrain*	*Control and stability of haptic interfaces*
	SLO-2	*Case Study*		*Control equation*	*Case Study*	*Example*
S-9	SLO-1			*Numerical simulation for planar 2 link flexible manipulator*		*Introduction to tele robotic systems*
	SLO-2			*Simulation*		*Application*
S-10	SLO-1			*Simulation for planar 2 link flexible manipulator*		*Control architecture*
	SLO-2			*Simulation*		*Example*
S-11	SLO-1					*Bilateral control and force feedback*
	SLO-2					*Example*
S-12	SLO-1					*Communication and networking*
	SLO-2					*Example*

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the various types of industrial, field and service robots and their characteristics and capabilities*
CLR-2 :	*Equip with the knowledge of mathematical modeling of specialized robots*
CLR-3 :	*Familiarize with the operation of robots and processes involved*
CLR-4 :	*Select the right robot with required configurations and specifications for given applications*
CLR-5 :	*Familiarize with the applications of various field and service robots*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Recognize the various types of industrial, field and service robots and their characteristics and capabilities*	2	75	70	H	H	L	H	L	-	-	-	-	-	-	H	H	H	H
CLO-2 :	*Develop mathematical modeling of specialized robots*	3	75	70	H	H	M	H	H	-	-	-	-	-	-	H	M	M	M
CLO-3 :	*Familiarize with the operation of robots and processes involved*	3	75	70	H	H	M	H	M	-	-	-	-	-	-	H	M	M	M
CLO-4 :	*Decide the right robot with required configurations and specifications for given applications*	3	75	70	H	H	M	H	M	-	-	-	-	-	-	H	M	M	M
CLO-5 :	*Utilize the field and service robots for various applications*	3	75	70	H	H	M	H	M	-	-	-	-	-	-	H	M	M	M

		Applications of Robots in Industries	Underwater and Aerial Robots	Field robots	Robots in Surgery and Rehabilitation	Entertainment and Personal Robots
Duration (hour)		9	10	9	9	8
S-1	SLO-1	*Introduction to Robotics- Overview of syllabus*	*Autonomous Underwater vehicles (AUV)*	*Forestry- Robot locomotion*	*Medical robotics- Introduction*	*Cleaning robots*
	SLO-2	*A short history of Industrial robots*	*Autonomous Surface Vehicles (ASV)*	*Forestry automation*	*core concepts- technology*	*Cleaning robots*
S-2	SLO-1	*Typical applications & robot configurations*	*Modeling of AUV*	*SLAM in forestry*	*Medical robotic systems*	*Lawn moving robots*
	SLO-2	*Typical applications & robot configurations*	*Modeling of AUV*	*Autonomous robots for silviculture and treatment*	*Medical robotic systems*	*Lawn moving robots*
S-3	SLO-1	*Robots in welding*	*Modeling of ASV*	*Broad acre Applications*	*Medical robotic systems-research areas and applications*	*Smart appliances and smart homes*
	SLO-2	*Robots in welding*	*Modeling of ASV*	*Automatic guidance- sowing weeding- spraying*	*Medical robotic systems-research areas and applications*	*Smart appliances and smart homes*
S-4	SLO-1	*Car body assembly & Painting*	*Sensor systems and actuation systems*	*Automatic guidance- sowing weeding- spraying*	*Rehabilitation and health care robotics- overview-*	*The role of robots in education*
	SLO-2	*Car body assembly & Painting*	*Motion control system -guidance and control*	*Broad-acre harvesting*	*Rehabilitation and health care robotics- overview-*	*Educational robotic platforms*
S-5	SLO-1	*Material transfer and automation*	*Challenges in Localization of AUV & ASV*	*Horticulture: picking of fruits*	*Physical therapy and training robots*	*Robots and informal learning venues*
	SLO-2	*Machining*	*Remotely operated vehicles (ROVs)*	*Horticulture: picking of fruits*	*Physical therapy and training robots*	*Robots and informal learning venues*
S-6	SLO-1	*Kinematics and mechanisms review*	*Remotely operated vehicles, types and applications*	*Robot milking-sheep shearing*	*Aids for people with disabilities*	*Social robots that interact with people*
	SLO-2	*Kinematics and mechanisms review*	*Gliders*	*slaughtering-livestock inspection*	*Aids for people with disabilities*	*Social robot embodiment*

S-7	SLO-1	Tasks descriptions- teaching and programming	History of Unmanned aerial vehicles (UAV)	Robots in construction	Smart prostheses and orthoses	Multimodal Communication
	SLO-2	Tasks descriptions- teaching and programming	Different configurations of fixed and rotary wing aerial vehicles	Unsolved problems in construction- future directions	Smart prostheses and orthoses	Expressive emotion-based interaction
S-8	SLO-1	End-effectors	Kinematics and dynamics of quadcopter	Robots for hazardous applications-enabling technologies	Diagnosis and monitoring	Socio-cognitive skills
	SLO-2	End-effectors and System integration	Modeling of Quad rotor aerial vehicle	Search and rescue robots	Diagnosis and monitoring	Promising robots- open issues
S-9	SLO-1	Challenges in system integration	Overall Control system for UAVs	Disaster characteristics and impact on robots	Open challenges in using robots in medical applications	
	SLO-2	Approaches to system integration	Guidance and Navigation of UAV	Robots actually used at disaster	Future directions	
S-10	SLO-1		Applications of UAVs			
	SLO-2		Applications of UAVs

		Introduction	Localization	Control	Optical Flow and Tracking	Advanced Topics
Duration (hour)		8	10	10	10	7
S-1	SLO-1	*Review of probability theory*	*Markov localization*	*Robot Motion*	*Motion planning*	*Introduction to SLAM*
	SLO-2	*Uniform distribution*	*Formulation, advantages and limitation*	*Smoothing Algorithm*	*Global and local path planning*	*Problem definition and Mathematical basis*
S-2	SLO-1	*Probability after sense*	*Numerical problem for Markov localization*	*Path Smoothing*	*Motivation and challenges*	*Taxonomy of SLAM problem*
	SLO-2	*Normalize distribution*	*Numerical problem for Markov localization*	*Zero Data Weight*	*Approaches*	*SLAM Paradigms*
S-3	SLO-1	*Phit and Pmiss*	*Introduction to optimal state estimation problem*	*PID control*	*A* star search*	*Extended Kalman Filter (EKF) SLAM*
	SLO-2	*Sum of probabilities*	*State estimator for localization*	*Implementation aspects of proportional control*	*Numerical example*	*Mathematical basics*
S-4	SLO-1	*Sense function*	*Gaussian introduction*	*Implementation aspects of integral control*	*D* lite search*	*Numerical example for EKF*
	SLO-2	*Exact motion*	*Variance comparison*	*Implementation aspects of derivative control*	*Numerical example*	*Numerical example for EKF*
S-5	SLO-1	*Move function*	*Maximize Gaussian*	*Systematic Bias*	*Expansion grid*	*Introduction to particle filters*
	SLO-2	*Bayes rule*	*Measurement and motion*	*Systematic Bias*	*Numerical example*	*Introduction to particle filters*
S-6	SLO-1	*Theorem of total probability*	*Parameter update*	*PID Tuning for autonomous mobile systems*	*Dynamic programming*	*Mathematical formulation of particle filter in the context of SLAM*
	SLO-2	*Numerical problems*	*New mean variance*	*PID Tuning for autonomous mobile systems*	*Numerical example*	*Mathematical formulation of particle filter in the context of SLAM*

S-7	SLO-1	*Introduction to localization*	*Gaussian motion*	*Parameter optimization*	*Vector field histogram*	*Fast SLAM*
	SLO-2	*Types and Challenges*	*Kalman filter pseudocode*	*Parameter optimization*	*Numerical example*	*Fast SLAM for point landmark example*
S-8	SLO-1	*Belief Representation*	*Kalman prediction*		*Selection of global and local path planning algorithms*	*Derivation*
	SLO-2	*Types and comparison*	*Kalman prediction*		*Application case study*	*Real world challenges and examples*
S-9	SLO-1	*Map representation*	*Kalman filter design*			*Application case study for EKF based SLAM*
	SLO-2	*Types*	*Kalman filter design*			*Application case study for EKF based SLAM*
S-10	SLO-1	*Types and comparison of map representation strategies*	*Kalman matrices*			*Application case study for Particle Filter based SLAM*
	SLO-2	*Types and comparison of map representation strategies*	*Sensor fusion using Kalman filter*			*Application case study for Particle Filter based SLAM*

							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Obtain motivation for artificial intelligence and machine learning in robotics and vision*
CLR-2 :	*Appreciate the mathematics behind artificial intelligence*
CLR-3 :	*Understand the idea behind fuzzy logic for decision making*
CLR-4 :	*Understand the basics neural networks and deep learning philosophy*
CLR-5 :	*Get exposed to convolutional neural networks and its applications to vision guided robotics tasks*
CLR-6 :	*get awareness of deep neural networks for sequence modelling and reinforcement learning*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Formulate the mathematical basics of fuzzy and neural networks*	3	80	75	H	H	M	L	L	-	-	-	L	L	-	L	H	M	-
CLO-2 :	*Apply fuzzy logic problems to robotics applications*	3	85	80	H	H	M	M	L	-	-	-	M	L	-	L	H	M	-
CLO-3 :	*Develop neural networks for simple classification tasks*	2	70	65	H	M	L	M	L	-	-	-	M	L	-	L	H	M	-
CLO-4 :	*Exhibit conversant skill and knowledge with deep learning philosophy and training concepts*	2	75	70	H	M	M	M	M	-	-	-	M	L	-	L	H	M	-
CLO-5 :	*Implement convolutional neural networks for simple computer vision tasks*	2	85	80	H	M	M	M	M	-	-	-	M	L	-	L	H	M	-

		Introduction	Fuzzy Logic	Classical Neural Networks	CNN	RNN and Reinforcement Learning
Duration (hour)		8	10	10	8	10
S-1	SLO-1	*Introduction to artificial intelligence (AI)*	*Introduction to Fuzzy sets*	*Overview of biological neuro-system*	*Conventional neural networks vs. Deep learning in the context of computer vision*	*Unfolding computational graphs*
	SLO-2	*Intelligent agent*	*Classical and Fuzzy sets*	*Mathematical models of neurons*	*Support vector machine*	*Unfolding computational graphs*
S-2	SLO-1	*Categorization of AI*	*Overview of classical sets*	*ANN architecture*	*Numerical example*	*Recurrent neural networks*
	SLO-2	*Overview of different forms of learning*	*Membership function*	*Learning rules*	*Softmax*	*Deep recurrent networks*
S-3	SLO-1	*Overview of different forms of learning*	*Fuzzy rule generation*	*Learning paradigms*	*Numerical example*	*Long Short Term Memory (LSTM)*
	SLO-2	*Statistical decision theory*	*Fuzzy rule generation*	*Supervised, unsupervised semi-supervised and reinforcement Learning*	*Numerical example*	*Long Short Term Memory*
S-4	SLO-1	*Regression*	*Operations on fuzzy sets*	*Multi-layer perceptrons*	*Convolutional neural networks*	*Autoencoders*
	SLO-2	*Regression*	*Numerical examples*	*Multi-layer perceptrons*	*Convolution, pooling*	*Applications of autoencoders*
S-5	SLO-1	*Numerical problems*	*Fuzzy Arithmetic*	*Numerical problems based on perceptron*	*Activation functions*	*Reinforcement learning numerical example*
	SLO-2	*Numerical problems*	*Numerical examples*	*Numerical problems based on perceptron*	*Initialization*	*Reinforcement learning numerical example*
S-6	SLO-1	*Evaluation of learning algorithms and cross-validation*	*Fuzzy Logic*	*Backpropagation*	*Deep learning hardware*	*Deep reinformcement learning, Motivation*
	SLO-2	*Evaluation of learning algorithms and cross-validation*	*Fuzzification*	*Backpropagation*	*CPU, GPU, TPU*	*Examples for reinforcement learning*

S-7	SLO-1	*Applications of AI in robotics*	*Fuzzy sets*	*Numerical problems for back propagation*	*Best practices in training*	*Markov decision process*
	SLO-2	*Applications of AI in robotics*	*Defuzzification*	*Numerical problems for back propagation*	*Training neural networks*	*Major components of RL*
S-8	SLO-1		*Application case study for manipulator robotics application*	*Introduction of neuro-fuzzy systems*	*Data augmentation*	*Q-learning*
	SLO-2		*Application case study for manipulator robotics application*	*Introduction of neuro-fuzzy Systems*	*Transfer learning*	*Numerical example*
S-9	SLO-1		*Application case study for mobile robotics application*	*Architecture of neuro-fuzzy Networks*		*Deep Q-learning (DQN)*
	SLO-2		*Application case study for mobile robotics application*	*Architecture of neuro-fuzzy Networks*		*DQN training, best practices*
S-10	SLO-1			*Numerical example for neuro-fuzzy system*		*Application case study for deep reinforcement learning*
	SLO-2			*Numerical example for neuro-fuzzy system*		*Application case study for deep reinforcement learning*

Course Code	18MHE512T	Course Name	SYSTEMS ENGINEERING AND MANAGEMENT FOR ROBOTICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Mechatronics Engineering	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the foundations of systems engineering*
CLR-2 :	*Recognize the conflicting requirements of modern engineering systems like robots and their life cycle stages through some relevant case studies and appreciate the need for system engineering*
CLR-3 :	*Gain sound knowledge on technical ,management, organizational and tailoring processes involved in system engineering and their analysis*
CLR-4 :	*Comprehend the cross-cutting system engineering methods and activities*
CLR-5 :	*Apply the knowledge of system engineering to solve the problems associated with complex engineering systems*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Familiarize the foundations of systems engineering*	2	75	70	H	H	M	H	M	-	-	-	-	-	-	H	H	H	H
CLO-2 :	*Identify the conflicting requirements of modern engineering systems and their life cycle stages*	3	75	70	H	H	M	H	M	-	M	-	-	-	-	H	M	M	M
CLO-3 :	*Acquire knowledge on technical ,management, organizational and tailoring processes involved in system engineering*	3	75	70	H	H	M	H	M	-	M	M	-	-	M	H	M	M	M
CLO-4 :	*Realize the cross-cutting system engineering methods and activities*	3	75	70	H	H	M	H	M	-	M	M	-	-	M	H	M	M	M
CLO-5 :	*Apply the knowledge of system engineering to solve the problems in robotics and other complex engineering systems*	3	75	70	H	H	M	H	H	-	M	M	-	-	M	H	M	M	M

		Foundations of Systems Engineering (SE) and Life Cycle Stages	Technical Process of Systems Engineering	Management Process of Systems Engineering	Organizational and Tailoring Processes and Applications of System Engineering	Cross-cutting SE Methods and Activities
Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction, definition and concepts of systems*	*Business or Mission Analysis Process*	*Project planning process*	*Life cycle model management process*	*Modeling and simulation*
	SLO-2	*The hierarchy within a system*	*Stakeholder needs and requirements*	*Project assessment and control process*	*Infrastructure management process*	*Modeling and simulation*
S-2	SLO-1	*Definition of systems of systems*	*System requirements Definition Process*	*Decision management process*	*Portfolio management process*	*Model based system engineering*
	SLO-2	*Enabling systems and definition of Systems Engineering(SE)*	*System requirements Definition Process*	*Decision management process*	*Human resource management process*	*Model based system engineering*
S-3	SLO-1	*Origins and Evolution of system engineering*	*Architecture definition process*	*Risk management process*	*Quality management process*	*Function-based system engineering*
	SLO-2	*Use and value of system engineering*	*Architecture definition process*	*Risk management process*	*Knowledge management process*	*Object-oriented system engineering*
S-4	SLO-1	*System science and system thinking*	*Design definition process*	*Configuration management process*	*Tailoring process*	*Prototyping, Interface management*
	SLO-2	*System engineering leadership and professional development*	*Design definition process*	*Configuration management process*	*Tailoring process*	*Integrated product and process development*
S-5	SLO-1	*Introduction to Life cycle and its characteristics*	*System analysis process*	*Information management process*	*Tailoring for Automotive systems, Biomedical and healthcare systems*	*Integrated product and process development*
	SLO-2	*Life cycle stages*	*Implementation process*	*Information management process*	*Tailoring for defense and aerospace systems*	*Lean and agile system engineering*
S-6	SLO-1	*Life cycle approaches*	*Integration process*	*Measurement Process*	*Tailoring for infrastructure systems*	*Affordability analysis*
	SLO-2	*Life cycle approaches*	*Verification process*	*Measurement Process*	*Tailoring for space systems and ground transportation systems*	*Electromagnetic compatibility*

S-7	SLO-1	*Deciding what is best for organization, project or team*	*Transition process*	*Quality assurance process*	*Application of SE for product line management*	*Environmental /impact analysis, interoperability analysis*
	SLO-2	*Case study-1 Design for safety-Radiation therapy*	*Validation process*	*Quality assurance process*	*Application of SE for product line management*	*Logistics, manufacturing and producibility analysis*
S-8	SLO-1	*Case study-2 Need for prototyping system-Super high speed train in China*	*Operation process*	*Agreement process-introduction*	*Application of SE for services*	*Reliability and maintainability*
	SLO-2	*Case study -3 Cyber security considerations-The stuxnet attack*	*Maintenance process*	*Acquisition process*	*Application of SE for services*	*Resilience engineering*
S-9	SLO-1	*Case study-4 Design for maintainability-Incubators*	*Disposal process*	*Acquisition process*	*Application of SE for Enterprises*	*System safety and security engineering*
	SLO-2	*Concluding remarks on necessity of SE by relating to the above case studies*	*Concluding remarks on technical process*	*Supply process*	*Application of SE for small and micro enterprises*	*Value engineering*

ACADEMIC CURRICULA

Professional Elective Courses

NANOTECHNOLOGY

Regulations - 2018

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

(Deemed to be University u/s 3 of UGC Act, 1956)

Kattankulathur, Kancheepuram, Tamil Nadu, India

Course Code	18NTE301T	Course Name	CARBON NANOTECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Acquire knowledge various forms of carbon*
CLR-2 :	*Understands the use of carbon forms in applications*
CLR-3 :	*Understands the physical and chemical properties of fullerenes*
CLR-4 :	*Understands the physical and chemical properties of graphene*
CLR-5 :	*Understands the physical and chemical properties of carbon nanotubes*
CLR-6 :	*Acquire knowledge about various synthesis forms*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1	Learning 2	Learning 3	Program Learning Outcomes (PLO) 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Analyze the geometry of various carbon nanostructures*	2	80	75	H	H	H	H	M	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Differentiate the structure and properties of different carbon nanostructure*	2	80	70	H	H	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Elucidate the uses of Fullerenes, Carbon nanotubes and Graphene in different applications*	2	75	70	H	M	H	H	M	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Analyze the geometry of various carbon nano tubes*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Analyze the various synthesis and characterization techniques of carbon nanostructures*	2	80	70	H	H	H	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6 :	*Demonstrate the applications of carbon nanostructures*	2	80	75	H	M	M	H	M	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction*	*Fullerenes*	*Carbon Nanotubes*	*Graphene*	*Introduction to thin films*
	SLO-2	*Carbon molecules*	*Structure of fullerenes*	*Structure of Carbon Nanotubes*	*Structure of Graphene*	*Carbon thin films*
S-2	SLO-1	*Nature of carbon bond*	*Bonding of fullerenes*	*Nomenclature of Carbon Nanotubes*	*Synthesis of Graphene*	*Amorphous nature*
	SLO-2	*New carbon structures*	*Nomenclature*	*Electronic properties of Carbon Nanotubes (CNTs)*	*Characterization of Graphene*	*Crystalline nature*
S-3	SLO-1	*Discovery of C60*	*C60 and higher fullerenes*	*Synthesis of Single Wall CNTs (SWCNTs)*	*Properties of Graphene*	*Chemical vapor deposition (CVD): Diamond*
	SLO-2	*Structure of C60*	*Growth mechanisms*	*Production of SWCNTs*	*Electrical properties of Graphene*	*Structure of CVD diamond*
S-4	SLO-1	*C60 crystal*	*Production*	*Synthesis of Multi Wall CNTs (SWCNTs)*	*Magnetic properties of Graphene*	*Synthesis of CVD diamond*
	SLO-2	*From graphene sheet to a nanotube*	*Purification*	*Production of MWCNTs*	*Band structure of Graphene*	*Physical properties of CVD diamond*
S-5	SLO-1	*Single wall and multi walled nanotubes*	*Fullerene preparation by pyrolysis of hydrocarbons*	*Growth mechanism of CNTs*	*Phonon modes in Graphene*	*Chemical properties of CVD diamond*
	SLO-2	*Zigzag nanotubes*	*Partial combustion of hydrocarbons*	*Analysis of Carbon Nanotubes by X-ray diffraction*	*Raman modes in Graphene*	*CVD diamond as wear resistant coating*
S-6	SLO-1	*Armchair nanotubes*	*Physical properties*	*Analysis of carbon nanotubes by Raman Spectroscopy*	*Layer dependence of Raman spectra*	*CVD diamond as bio-chemical sensors*
	SLO-2	*Chirality in nanotubes*	*Chemical properties*	*Carbon nanotubes as Transistors*	*Raman spectroscopy of Graphene under strain*	*Optical applications: infrared windows, lenses, X-ray Windows*

S-7	SLO-1	*Structure of defective nanotubes*	*Hydrogenation*	*Carbon nanotubes as Field Effect Transistors (FET)*	*Infrared spectroscopy of Graphene*	*Amorphous carbon thin films*
	SLO-2	*Bonding of defective nanotubes*	*Applications of fullerenes*	*Carbon nanotubes as sensors*	*X-Ray diffraction of Graphene*	*Amorphous carbon films (a:C)*
S-8	SLO-1	*Cylindrical nanotubes*	*Fullerenes in solar cell*	*Carbon nanotubes as bio-sensors*	*EELS of Graphene*	*Hydrogen amorphous carbon films (a:C-H)*
	SLO-2	*Euler's theorem*	*Fullerenes as donor systems*	*Carbon nanotubes as gas sensors*	*Graphene in solar cell applications*	*Physical properties of amorphous carbon film*
S-9	SLO-1	*Euler's theorem in cylindrical nanotubes*	*Fullerenes as acceptor systems*	*Carbon nanotubes in dye degradation*	*Graphene as gas sensors*	*Chemical properties of amorphous carbon film*
	SLO-2	*Euler's theorem in defective nanotubes*	*Fullerenes as chemical sensors*	*Carbon nanotubes in photo-catalytic activities*	*Graphene in dye degradation (photo-catalytic activities)*	*Amorphous carbon film as anti-reflection and anti-corrosive coatings*

Course Code	18NTE302T	Course Name	PHYSICS OF SOLID STATE DEVICES	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Get knowledge in the design and working principle of solid state devices*
CLR-2 :	*Understand the physics of p-n junction*
CLR-3 :	*Familiarize with the concept of metal/semiconductor junctions and semiconductor heterojunctions*
CLR-4 :	*Describe the operation of basic semiconductor diodes*
CLR-5 :	*Understand the theory of various types of transistors*
CLR-6:	*Acquire knowledge on the materials and working of solid-state optoelectronic devices like LEDs, Solar cells, Photodetectors, Lasers, etc*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1 Level of Thinking (Bloom)	Learning 2 Expected Proficiency (%)	Learning 3 Expected Attainment (%)	PLO 1 Engineering Knowledge	PLO 2 Problem Analysis	PLO 3 Design & Development	PLO 4 Analysis, Design, Research	PLO 5 Modern Tool Usage	PLO 6 Society & Culture	PLO 7 Environment & Sustainability	PLO 8 Ethics	PLO 9 Individual & Team Work	PLO 10 Communication	PLO 11 Project Mgt. & Finance	PLO 12 Life Long Learning	PLO 13 PSO - 1	PLO 14 PSO - 2	PLO 15 PSO - 3
CLO-1 :	*Realize importance of semiconducting materials and p-n junction for development of solid state devices*	2	80	75	H	H	H	H	H	H	H	H	H	H	M	H	H	H	H
CLO-2 :	*Use knowledge of physics to understand the workingof semiconductor devices*	2	80	70	H	H	H	H	M	M	M	H	H	H	L	H	M	M	M
CLO-3 :	*Develop analytical approaches to understand semiconductor devices*	2	75	70	H	L	H	H	H	H	H	H	H	H	M	H	H	H	H
CLO-4 :	*Develop in depth understanding on the principle of working of different solid state devices*	2	80	75	H	H	H	H	M	M	H	H	H	H	M	H	H	H	H
CLO-5 :	*Distinguish the design principles of various solid state devices*	2	80	70	H	M	H	H	M	M	H	H	H	H	L	H	H	H	H
CLO6:	*Design two-terminal and three-terminal electronic devices*	2	80	70	H	H	H	H	M	M	M	H	H	H	L	H	M	M	M

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Concept of p-n junction*	*Understand what a metal-semiconductor contact is.*	*Study fundamentals of BJT operation*	*Principle and types of field-effect transistors*	*Understand optical generation of carriers in a p-n junction*
	SLO-2	*Physics of the p-n junction formation*	*Qualitative characteristics of energy band formation*	*Operation modes of a BJT*	*Principle of operation of JFET*	*Types of Photodiodes*
S-2	SLO-1	*Energy band diagram of a p-n junction*	*Understand the ideal junction properties*	*Understand the structure and working of p-n-p and n-p-n transistors*	*Concept of pinch-off and saturation*	*Solar radiation and ideal conversion efficiency of a solar cell*
	SLO-2	*Estimation of the electric field, electric potential, and built-in potential*	*Theoretical considerations in estimating the barrier height*	*Band diagram and static characteristics*	*Derive I-V characteristics of JFET*	*Physics of solar cell*
S-3	SLO-1	*Depletion approximation and estimation of space charge width*	*Nonideal effects on the barrier height*	*Factors involved in transistor amplification*	*GaAs epitaxial layers for MESFET – Principle of working*	*Device configuration and technology roadmap, solar cell materials*
	SLO-2	*Depletion layer capacitance and its estimation*	*Qualitative explanation of image-force-induced lowering of the potential barrier*	*BJT fabrication*	*Concept of high-electron mobility transistors - III-V semiconductor materials*	*Familiarize with the solar cell parameters and efficiency calculation*
S-4	SLO-1	*Linearly graded junction in thermal equilibrium*	*Current transport processes in metal-semiconductor contacts*	*Analysis of minority carrier distribution*	*Basic working and fabrication of MOSFET*	*Design principle of photodetector*
	SLO-2	*Arbitrary doping profile and understanding the doping profile from $1/C^2$-V plot*	*Comparison of the Schottky barrier diode and the p-n junction diode*	*Solution of the diffusion equation in the base region*	*Knowledge on modes of operation and short channel MOSFET*	*Types of photodetectors and characteristics*
S-5	SLO-1	*Qualitative description of charge flow in a p-n junction*	*Metal-semiconductor Ohmic contacts*	*Evaluation of the terminal currents*	*Short channel effects in MOSFET*	*How light-emitting diodes work?*
	SLO-2	*Ideal current-voltage characteristics of a p-n junction*	*Concept of ideal nonrectifying and tunneling barriers*	*Non ideal effects in BJT*	*Advanced MOSFET structures*	*Basic device structure and the concept of radiative recombination*

S-6	SLO-1	*Derivation of Shockley equation (ideal-diode equation)*	*Methods to experimentally measure the barrier height*	*Deviations from the basic theory and indicate situations in which each effect is important*	*Metal Gate-High-k and Enhanced Channel Mobility Materials and Strained Si FETs*	*Materials of choice and technology roadmap*
	SLO-2	*Generation-recombination process and its effect*	*Current-voltage and capacitance-voltage measurements*	*The physical mechanisms of the current gain limiting factors*	*Complementary MOS structure and its formation*	*Specifications used in denoting the practical LED bulbs*
S-7	SLO-1	*Reverse bias breakdown mechanisms in a pn junction*	*Photoelectric measurements*	*The voltage breakdown mechanisms in abipolar transistor*	*CMOS process integration*	*Physics of laser action*
	SLO-2	*Zener and Avalanche breakdown*	*Figure of merit of ohmic contacts and its determination, the concept of specific contact resistance*	*The current-limiting factors from the current components in the transistor*	*Concept of modulation doping in HEMT*	*Gain knowledge of stimulated emission and population inversion*
S-8	SLO-1	*Transient behavior of a p-n junction*	*Isotype and anisotype semiconductor heterojunctions - energy band diagrams*	*Frequency limitations of transistors*	*Basic device structure of AlGaAs/GaAs HEMT and I-V characteristics*	*Fabrication of p-n junction laser*
	SLO-2	*Concept of Noise in semiconductor devices*	*Current density equations and physical interpretation*	*The voltage breakdown mechanisms in a bipolar transistor*	*Output characteristics and channel related phenomenon*	*Emission spectra*
S-9	SLO-1	*Terminal functions of a p-n junction diode, The concept of tunnel diode*	*Introduction to two-dimensional electron gas*	*Heterojunction BJT*	*Dynamic effects in MOS capacitors – The Charge-coupled device*	*Familiarize with the structure and need of heterojunction lasers*
	SLO-2	*p-n junction as rectifier, Zener diode, Varistor, and Varactor*	*Concept of quantum well and superlattice structures*	*Schottky and Photo transistors*	*Basic CCD structure and its applications*	*Materials for semiconductor lasers and quantum cascade lasers*

Learning Resources	1. *S M Sze, Kwok k. Ng, "Physics of semiconductor devices" – John Wiley & Sons, Inc., 2007* 2. *Ben G. Streetman, Sanjay Kumar Banerjee, "Solid State Electronic Devices", Pearson Education Ltd, 2016*	3. *Donald A. Neamen, "Semiconductor Physics and Devices: Basic Principles" – McGraw Hill, Fourth Edition, 2011.*

Course Code	18NTE303T	Course Name	MOLECULAR SPECTROSCOPY AND ITS APPLICATIONS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Acquire the knowledge in the basic concepts of interaction of radiation with matter and rotational spectroscopy*
CLR-2 :	*Comprehend the principles of vibrational spectroscopy*
CLR-3 :	*Understand the principles and techniques involved in of Raman scattering*
CLR-4 :	*Emphasize the significance of various techniques in electronic spectroscopy*
CLR-5 :	*Expose to concepts and applications of magnetic resonance*
CLR-6 :	*Focus on relevant theory, concepts, and techniques for understanding the spectrum of molecules*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Interpret the processes of absorption and radiation and analyse the rotational motion in molecules*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Analyze the vibrational spectra of diatomic and polyatomic molecules*	2	80	70	H	M	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Analyze the Raman spectra and various non-linear Raman techniques*	2	75	70	H	M	M	H	H	M	M	M	M	H	H	H	H	H	H
CLO-4 :	*Elucidate the various optical processes involved in the electronic spectra.*	2	80	75	M	H	M	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Apply the concept magnetic resonance in chemical analysis and structure determination.*	2	80	70	H	M	M	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6 :	*Critique the applicability of a spectroscopic approach in the analysis of a molecular structure*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Electromagnetic spectrum, spectral regions*	*Vibrational energy of a diatomic molecule*	*Born oppenheimer approximation*	*Quantum theory of Raman scattering*	*Magnetic moments*
	SLO-2	*Types of molecular energies*	*Classical approach*	*Vibrational coarse structure*	*Classical theory of Raman scattering*	*Quantization*
S-2	SLO-1	*Interaction of light with matter*	*Wave mechanical approach*	*Band system and vibrational transitions*	*Rotational Raman spectra*	*Larmor precession*
	SLO-2	*Methods of obtaining a spectrum, components of a spectrometer*	*Morse curve and energy levels of a diatomic molecule*	*Progressions and sequences*	*Vibrational Raman spectra*	*Resonance condition in Nuclear magnetic resonance (NMR)*
S-3	SLO-1	*Spectral line width and broadening of spectral lines*	*Selection rules for vibration*	*Franck condon principle*	*Mutual exclusion principle*	*Spin –spin relaxation*
	SLO-2	*Intensity of spectral lines*	*Fundamental overtones and hotbands in the vibrational spectrum*	*Intensity of vibrational electronic spectra*	*Polarization of Raman scattered light*	*Spin-lattice relaxation*
S-4	SLO-1	*Absorption and emission of radiation*	*Accidental degeneracy*	*Rotational fine structure*	*Raman spectrometer*	*NMR spectrometer*
	SLO-2	*Spontaneous and stimulated processes*	*Diatomic vibrating rotator*	*Assignment of bands in a fine structure*	*Analysis of Raman spectra*	*Chemical shift*
S-5	SLO-1	*Einstein's co-efficients and its derivation*	*Selection rules for vibration-rotation*	*Dissociation energy and dissociation products*	*Structure determination using Raman spectroscopy*	*Factors contributing to screening*
	SLO-2	*Laser as a spectroscopic light source*	*Vibrations of polyatomic molecules*	*Predissociation*	*Raman investigation of phase transitions*	*Double resonance technique*
S-6	SLO-1	*Classification of molecules based on moment of inertia*	*Normal vibrations of CO_2 and H_2O molecules*	*Electronic absorption spectra*	*Resonance Raman scattering*	*NMR imaging*

	SLO-2	Rotational spectra of rigid diatomic molecules	Interpretation of IR spectra	Electronic angular momentum in diatomic molecules	Surface enhanced Raman scattering	Fourier transform NMR techniques
S-7	SLO-1	Rigid rotator	Group frequencies and various regions in IR spectrum	Dissipation of energy by excited molecule	Non-linear Raman phenomena-preliminaries	^{13}C NMR
	SLO-2	Isotope effect in rotational spectra, Intensity of rotational lines	Perturbation of group frequencies: mass effects	Jablonski diagram	Hyper Raman effect	Electron spin resonance
S-8	SLO-1	Non-rigid rotator	Perturbation of group frequencies: inductive effects	Phosphorescene	Stimulated Raman scattering	Resonance condition in Electron spin resonance (ESR)
	SLO-2	Vibrational excitation effect and Λ doubling	Fourier transform infrared spectroscopy: principle and interferometer arrangement	Fluorescence	Inverse Raman effect	ESR spectrometer
S-9	SLO-1	Microwave spectrometer	Elucidation of molecular structure using IR spectroscopy	Photoelectron spectroscopy: principle	Coherent Antistokes Raman scattering	Nuclear- electron spin coupling
	SLO-2	Applications of rotational spectroscopy	Identification of molecular constituents using IR spectroscopy	Photoelectron spectroscopy: instrumentation	Photo acoustic Raman scattering	Applications of ESR spectroscopy

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Acquire knowledge on nanotribology*
CLR-2 :	*Understand lubrication and related theories*
CLR-3 :	*Gain insight on surfaces forces and its measurement techniques*
CLR-4 :	*Know about mechanisms involved in tribology related mechanical properties*
CLR-5 :	*Enhance the knowledge on friction and wear and their importance*
CLR-6 :	*Attain knowledge on tribological applications in day to day life*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Strong knowledge in the basic tribological concepts required for nanotechnology*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Identify, formulate, and solve engineering problem of interacting surfaces in relative motion*	2	80	70	H	M	M	H	M	M	M	H	M	M	M	H	M	M	M
CLO-3 :	*Emphasize the knowledge of scientific disciplines in understanding tribological phenomenon*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	M	H	H	H
CLO-4 :	*Realize the significance of lubrication, friction and wear*	2	80	75	H	H	M	M	M	H	H	H	H	M	M	H	H	H	M
CLO-5 :	*Familiar in the importance of modifying surface properties*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	H	M	M	H
CLO-6 :	*Utilize nanotribological principles for any applications*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	M	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*History of tribology-origin*	*Surface Forces*	*Lubrication*	*Scale Effects in Mechanical Properties*	*Applications of Tribology*
	SLO-2	*Significance of micro/nanotribology*	*Methods used to study surface forces*	*Lubricant States*	*Nomenclature*	*Introduction to various tribological phenomenon*
S-2	SLO-1	*Tribology in design-Methods of solution of tribological problems*	*Force laws*	*Viscosity of lubricant*	*Yield strength and Hardness*	*Bio-Tribology*
	SLO-2	*Purpose of lubrication*	*Surface force apparatus (SFA)*	*Fluid film lubrication*	*Shear strength at the interface*	*Tribology in the human body*
S-3	SLO-1	*Modes of lubrication- hydrodynamic*	*Force between dry surface*	*Theories of hydrodynamics lubrication*	*Scale dependence on surface roughness and contact parameters*	*Tribology in the artificial organs*
	SLO-2	*Hydrostaticlubrication*	*Force between surfaces in liquid*	*Lubrication design of typical mechanical elements*	*Dependence of contact parameters on load*	*Tribology in medical devices*
S-4	SLO-1	*Boundary lubrication*	*Adhesion*	*Transformation*	*Scale effects in friction*	*Natural human synovial joints*
	SLO-2	*Elastohydrodynamic lubrication*	*Capillary forces*	*Parameter of surface topography*	*Adhesion Friction*	*Total joint replacements*
S-5	SLO-1	*Extreme pressure lubrication*	*Modes of deformation*	*Friction- Basic laws of friction*	*Two body deformation*	*Wind turbine Tribology*
	SLO-2	*Lubricants - types and lubricating oils*	*Description of AFM/FFM*	*Static and kinetic friction*	*Three body deformation*	*Biorefining*
S-6	SLO-1	*Lubricant properties-effect of temperature and pressure*	*Other measurement techniques*	*Friction of materials*	*Ratchet mechanism*	*Coating applications- sliding bearings*

	SLO-2	*Oxidation stability*	*Surface roughness*	*Solid – solid contact*	*Meniscus Analysis*	*Rolling contact*
S-7	SLO-1	*Thermal conductivity*	*Friction force*	*Liquid mediated contact*	*Total value of coefficient of friction*	*Bearings*
	SLO-2	*Type of additives*	*Scratching*	*Interfacing temperature of sliding Surfaces*	*Transformation from elastic to plastic regime*	*Gears*
S-8	SLO-1	*Bearings- classification based on mode of lubrication*	*Wear and machining*	*Wear-Laws of wear*	*Tribological properties of SAMs*	*Erosion and scratch resistant*
	SLO-2	*Bearing-Classification based on relative motion between contact surfaces*	*Surface potential measurements*	*Mild and Severe wear*	*Tailoring surfaces*	*Magnetic recording devices*
S-9	SLO-1	*Comparison of sliding and rolling contact bearing*	*Nanoindentation measurement*	*Identification of wear mechanism,*	*Modifying surface composition for application in Tribology*	*Micro components*
	SLO-2	*Solving numerical problems on above topics*	*Boundary lubrication*	*Typical test geometries*	*Modifying Structurefor application in Tribology*	*MEMS/NEMS*

Course Code	18NTE305T	Course Name	NANOTECHNOLOGY LEGAL ASPECTS	Course Category	E	Professional Elective Course	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Familiarize with the concept of patent and copyright laws*
CLR-2 :	*Understand the concept of trade mark, trade secret and IP infringement*
CLR-3 :	*Understand the government policies and rules related to nanotechnology*
CLR-4 :	*Gain knowledge on environmental degradation and current regulations*
CLR-5 :	*Learn the social and ethical impact of nanotechnology*
CLR-6 :	*Understand the concept of taxation, trade, security, privacy, export import of nanomaterials*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction*	*Government policies and rules*	*Environmental degradation*	*Social impact of nanotechnology*	*Trade and business in nanotechnology*
	SLO-2	*Patents*	*Quality of information*	*Current environmental regulations*	*Economic impact of nanotechnology*	*Trade restrictions*
S-2	SLO-1	*Patentability requirements – structure of patent*	*Food and drugs evaluation method*	*Classification*	*Implications of nanotechnology*	*Taxation system*
	SLO-2	*Utility patent*	*Food and drugs research*	*Sources of pollutants*	*Effect on the quality of life*	*Taxation of goods too small to be seen*
S-3	SLO-1	*Design patent, monopoly powers*	*Classification of medical products*	*Pollution – air*	*Short term implications*	*Laws for genetic research*
	SLO-2	*licensing strategies and arrangements*	*Safe workplace*	*Pollution – water*	*Long term implications*	*Rights of new life form*
S-4	SLO-1	*Classification of patent applications*	*Self-regulation*	*Industrial waste water*	*Ethical issues in nanotechnology*	*Government surveillance*
	SLO-2	*Willful infringement issues, claim scope*	*Liability – responsibility of a scientist*	*Control and quality check*	*Social and environmental issues in nanotechnology*	*Privacy violations*
S-5	SLO-1	*Reexamination of patents*	*Civil laws*	*Dispersion methods*	*Artificial intellects*	*Security and monitoring*
	SLO-2	*Patent treaties*	*Criminal laws in nanotechnology*	*Monitoring*	*Ethics for artificial intellects*	*Eavesdropping*
S-6	SLO-1	*Copyright laws – fixation*	*Negligence to nanotechnology – breach of duty causation*	*Solid waste – homes*	*Nanotechnology and life extension*	*R&D in Nanotechnology*

	SLO-2	*Originality, creativity*	*Negligence to nanotechnology – damage and defense*	*Solid waste – industrial*	*Nanotechnology for national security*	*R&D regulation*
S-7	SLO-1	*Integrated circuit topographies*	*Risk associated with nanoparticles*	*Hospital waste*	*Nanotechnology for space exploration*	*Current industrial design laws*
	SLO-2	*Industrial designs, artistic work – arrangement of atoms*	*Nanoparticles use and effects on health*	*Hazardous chemical waste*	*Nanotechnology for medical applications*	*Change in industrial design laws*
S-8	SLO-1	*Technology transfer*	*Liability for nanoparticles side effects*	*Toxicity, health issues*	*Moral issues of Nanotechnology applications*	*Export – import regulations*
	SLO-2	*Trademarks*	*Role and responsibilities*	*Safety issues*	*Public perception of Nano-technological risk*	*Crimes using Nanoparticles*
S-9	SLO-1	*Trade secrets*	*Class action*	*Risk assessment and analysis*	*Education of public about Nanotechnology*	*Corporate criminal liability,*
	SLO-2	*Ownership of IP*	*Certification*	*Responsibility and rules*	*Training of public about Nanomaterials*	*prevention and detention*

Course Code	18NTE306T	Course Name	LITHOGRAPHIC TECHNIQUES AND FABRICATION	Course Category	E	Professional Elective Course	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Micro and Nanofabrication	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand the physical significance of lithography tools in micro/nano structures creation*
CLR-2 :	*Acquire knowledge on masked lithography, uv and deep uv lithography, its merits and demerits*
CLR-3 :	*Understand the concept of direct lithography, its advantages; electron beam for lithography and their applications*
CLR-4 :	*Acquiring comparative knowledge of different lithography tools*
CLR-5 :	*Acquire knowledge on the replication tools such as nano imprint lithography, injection molding and others.*
CLR-6 :	*Make aware of VLSI technology*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Make use of top-down approach for micro/nano fabrication*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	M	H	H	H
CLO-2 :	*Analyze the limitation of masked lithography with respect to incident radiation*	2	80	70	H	M	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Using electron beams for the creation of nano structures*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	M	H	H	H
CLO-4 :	*Know the other techniques of nano fabrication using light and heavy ion beams*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	M	H	H	H
CLO-5 :	*Apply knowledge of mass production replication tools*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	M	H	H	H
CLO-6 :	*Imagine importance of nanoscale devices*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Micro/nano fabrication*	*Optical(photo) lithography*	*Introduction-maskless/direct lithography tools*	*Ion beam lithography (IBL) types*	*Micro/ Nano replication tools*
	SLO-2	*Top-down & bottom-up approach*	*Process steps*	*Difference between masked and maskless lithography*	*Heavy and light ions for lithography*	*Necessity for replication*
S-2	SLO-1	*Necessity for clean room, types of clean room*	*Optical lithography mask*	*Advantages and disadvantages of maskless lithography*	*Focused ion beam properties*	*Application areas-MEMS/NEMS, micro/nanofluidics*
	SLO-2	*Construction and maintenance of clean room,*	*Mask definition, and different materials*	*Principles of electron beam lithography (EBL) system*	*Beam scanning*	*Soft lithography*
S-3	SLO-1	*Clean room standards, protocols*	*Different light sources*	*Electron properties for lithography*	*Resists for ion beam lithography*	*PDMS Casting*
	SLO-2	*Lithography- process steps*	*Contact and proximity exposures*	*Design of electron beam lithography system*	*Electron lithography process flow*	*Mold fabrication for soft lithography*
S-4	SLO-1	*Photo resists materials, types and characteristics*	*Diffraction limit and resolutions enhancement methods*	*Operation of electron beam lithography system*	*Focused ion beam lithography- Incident ion properties*	*Micro injection molding*
	SLO-2	*Spin coating methods*	*Projection lithography*	*E-beam resists*	*Principle, design and operation*	*Hot embossing*
S-5	SLO-1	*Exposure dose*	*Extreme UV (EUV) lithography*	*E-beam resist properties*	*Masked ion beam structuring: Broad beam patterning*	*Nano imprint lithography NIL principles*
	SLO-2	*chemical development, optimization*	*EUV: Scope and demerits*	*Comparison with optical lithography resists*	*Atom lithography*	*Mold fabrication for hot embossing and NIL*
S-6	SLO-1	*Etching methods, resist and other materials*	*Interferometric and holographic tools*	*Dose calculation*	*Proton beam lithography*	*Mold fabrication for injection molding*

	SLO-2	*Dry and wet methods*	*Lithography masks*	*Significance of beam blanking*	*Comparison of electron, proton and gallium for resist patterning*	*Process flow and requirements*
S-7	SLO-1	*Wet etching chemicals, Si etching*	*Laser writer: near UV and Deep UV masks*	*Patterning resolution comparison with other methods*	*Limitation and suitability of each technique in comparison with one another*	*Polymers for imprinting*
	SLO-2	*Wet etching examples*	*Synchrotron radiation for lithography processes*	*EBL for mask preparation*	*IBL resists, dose calculation and process optimization*	*Polymer characteristics and performance*
S-8	SLO-1	*Reactive ion etching*	*X-ray lithography mask*	*Nanofabrication with EBL – MEMS*	*Nanofabrication with IBL – MEMS*	*Master mold preparation for replication tools, comparison*
	SLO-2	*Isotropic and non isotropic etching*	*X-ray lithography, merits and demerits*	*Nanofabrication with EBL – NEMS*	*Nanofabrication with IBL – NEMS*	*Application-microfluidics*
S-9	SLO-1	*Types of lithography : classification*	*Comparison of all masked lithography tools*	*Nanofabrication with EBL –microfluidics applications*	*Nanofabrication with IBL –microfluidics applications*	*Application-nano fluidics*
	SLO-2	*Introduction to next generation lithography tools*	*Specific applications of different lithography tools.*	*Nanofabrication with EBL – Nanofluidics applications*	*Nanofabrication with IBL – Nanofluidics applications*	*Industrial applications*

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understand basic principles and characteristics of sensors and transducers*
CLR-2 :	*Gain knowledge on mechanical and electromechanical sensors*
CLR-3 :	*Get acquainted with thermal sensors and its types*
CLR-4 :	*Know about magnetic sensors and radiation sensors*
CLR-5 :	*Gain knowledge on electrochemical sensors*
CLR-6 :	*Apprehend knowledge on recent trends in sensor technologies and applications*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	Program Learning Outcomes (PLO) 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Analyze calibration techniques and signal types of sensors*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	M	H	H	H
CLO-2 :	*Expertise in various types of Sensors & Transducers and their working principles*	2	80	70	H	M	M	H	M	M	M	H	M	H	M	M	M	M	M
CLO-3 :	*Evaluate performance characteristics of different sensors and transducers*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	M	H	H	H
CLO-4 :	*Predict exactly the expected performance of various sensors*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Develop advance techniques in sensor technology*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6 :	*Devise smart sensors for real time applications*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Measurements-Basic method of measurement*	*Mechanical and electromechanical sensors Resistive potentiometer*	*Thermal sensors- Gas thermometric sensors*	*Magnetic sensors-Introduction*	*Electroanalytical sensors-introduction*
	SLO-2	*Errors*	*Strain gauge*	*Thermal expansion type thermometric sensors*	*Principles behind*	*Electrochemical cell*
S-2	SLO-1	*Classification of errors*	*Inductive sensors*	*Acoustic temperature sensor*	*Yoke coil sensors*	*Sensor electrodes-Molecular selective electrodes*
	SLO-2	*Error analysis*	*Sensitivity and linearity of sensor*	*Dielectric constant and refractive index of thermosensors*	*Coaxial type sensors-Force and displacement sensors*	*ChemFET*
S-3	SLO-1	*Statistical methods*	*Ferromagnetic plunger type transducers*	*Helium low temperature thermometer-Nuclear thermometer*	*Magnetoresistive sensors- Anisotropic magnetoresistive sensing*	*Recent trends in sensor technologies*
	SLO-2	*Sensors/Transducers-Introduction*	*Electromagnetic transducer*	*Magnetic thermometer*	*Semiconductor magnetoresistors*	*Film sensors- Thick and thin film sensors*
S-4	SLO-1	*Principles of Sensors/Transducers*	*Magnetostrictive transducer*	*Resistance change type thermometric sensors*	*Active semiconductor magnetic sensors*	*Semiconductor IC technology*
	SLO-2	*Classification of Sensors/Transducers*	*Capacitive sensors*	*Metal resistance thermometric sensors*	*Hall effect sensor-sensor geometry and fabrication*	*Micro electro mechanical system (MEMS)-micromachining*
S-5	SLO-1	*Static Characteristics of Sensors/Transducers*	*Parallel plate capacitive sensor*	*Thermistors*	*Variable inductance sensors*	*Some application examples*
	SLO-2	*Accuracy-Precision-Resolution-Minimum detectable signal*	*Serrated plate capacitive sensor*	*Thermo emf sensors*	*Eddy current sensors*	*Nanosensors*
S-6	SLO-1	*Threshold-Sensitivity-Selectivity and specificity-Non-linearity*	*Variable thickness dielectric capacitive sensor*	*Materials for thermo emf sensors*	*Radiation sensors-Introduction-basic characteristics*	*Onboard automobile sensors-flow rate sensors-pressure sensors*
	SLO-2	*Hysteresis-Output impedance-isolation and grounding*	*Stretched diaphragm variable capacitance transducer*	*E (emf)-T(Temperature) relations*	*Types of photoresistors/photodetectors*	*Temperature sensors-oxygen sensors*

S-7	SLO-1	*Dynamic Characteristics*	*Electrostatic transducer*	*Thermosensors using semiconductor devices*	*Photoemissive cell and photomutliplier*	*Torque and position sensors*
	SLO-2	*Zero order and First order sensors*	*Piezoelectric elements*	*Thermal radiation sensors*	*Photoconductive cell-LDR*	*Home appliance sensors*
S-8	SLO-1	*Second order sensors*	*Piezoelectric materials*	*Detectors*	*Photocurrent*	*Aerospace sensors-Fluid velocity sensors*
	SLO-2	*Electrical characterization*	*Deformation modes and multimorphs*	*Pyroelectric thermal sensors*	*Photoresistors and photoFETs and other devices*	*Sensing direction of air flow- Monitoring strain, force, thrust and acceleration*
S-9	SLO-1	*Mechanical and thermal characterization*	*Lead zirconatetitanate (PZT) family*	*Quartz crystal thermoelectric sensors*	*Fibre optic sensors*	*Medical diagnostic sensors*
	SLO-2	*Optical characterization-Chemical/biological characterization*	*Force/stress sensors using quartz resonators*	*Heat flux sensors*	*Temperature sensors-microbend sensors*	*Sensors for environmental monitoring*

Course Code	18NTE308T	Course Name	2-D LAYERED NANOMATERIALS	Course Category	E	Professional Elective Course	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Understanding the electronic properties of 2D materials, especially Graphene*
CLR-2 :	*Acquire knowledge on the different synthesis methods*
CLR-3 :	*Describe the difference in various properties of 2D-layered structure*
CLR-4 :	*Classification of 2D layered Nanomaterials*
CLR-5 :	*Gain knowledge on application of layered Nanomaterials*
CLR-6:	*Understand the principles of various characterization tools to study the properties of 2D materials*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Apply the concept of atomic and electronic structure to understand the physical and chemical properties of graphene*	2	80	75	M	H	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Utilize the procedure to synthesize layered materials and the concept of Raman spectra over synthesized materials*	2	80	70	M	H	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Utilize the spectroscopic concepts to analyze the properties of layered materials*	2	75	70	M	H	H	H	H	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Apply the concept and the uses of semiconducting and metal dichalcogenides based materials*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Utilize the application of layered materials in various fields.*	2	80	70	H	H	H	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6:	*Utilize the concept of sensor to analyze the material nature.*	2	80	75	M	H	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction of graphene*	*Introduction to Scotch-tape method (micromechanical cleavage)*	*Introduction to X-ray photoemission spectroscopy*	*Graphene and its properties*	*Introduction to Gas sensors*
	SLO-2	*Vander Walls force*	*Preparation of graphene using Scotch-tape method*	*Limitation and application of XPS*	*Penta-graphene and its properties*	*Gas sensing mechanism and types of sensor*
S-2	SLO-1	*Covalent bond*	*Introduction and principle of Chemical vapor deposition*	*Introduction to X-ray diffraction study*	*h-BN structure, synthesis and properties*	*Chemical sensors*
	SLO-2	*Dimension of carbon allotrope*	*Preparation of graphene by CVD*	*Limitation and application of XRD*	*Application of h-BN*	*Uses smart materials in sensors*
S-3	SLO-1	*Transition of metal dichalcogenides*	*Introduction to Solution-exfoliation*	*Introduction to Optical absorption spectroscopy*	*SiC structure, synthesis and properties*	*2D materials based membranes*
	SLO-2	*Manipulation of quantum degree of freedom*	*Preparation of graphene using solution-exfoliation*	*Limitation and application of optical absorption spectroscopy*	*Application of SiC*	*Application of membrance*
S-4	SLO-1	*Crystal plane of 2D graphene*	*Introduction to Solution-exfoliation*	*Introduction and limitations of Scanning Tunneling Microscopy*	*Si structure, synthesis and properties*	*Oxygen reduction reaction*
	SLO-2	*Free standing model*	*Preparation of 2D layered material by solution exfoliation*	*Measuring mechanical properties*	*Application of Silicon*	*Uses of 2D materials in enhance the activity*
S-5	SLO-1	*Electronic structure of graphene*	*Decomposition*	*Introduction and limitations to BET analysis*	*Ge structure, synthesis and properties*	*Hydrogen production, types of hydrogen production*
	SLO-2	*Band structure*	*Decomposition of silicon carbide*	*Adsorption properties*	*Application of Ge*	*Uses of 2D materials in hydrogen production*
S-6	SLO-1	*Fermi levels in graphene*	*Principles of Raman spectroscopy*	*Introduction and limitations to VSM analysis*	*Types of oxide materials*	*Electronic devices*
	SLO-2	*Carrier density*	*Limitations of Raman spectroscopy*	*Magnetic properties*	*Properties of oxide materials*	*Difference between electronic and electric device*

S-7	SLO-1	*Role of defect and dopant*	*Raman spectrum of graphene*	*Types of interactions*	*Introduction and types of transition metal dichalcogenides*	*Optical materials*
	SLO-2	*Electronic structure of graphene*	*Analysis of D band Raman spectra*	*Catalytic properties*	*Introduction and application of* MoS_2	*Solar absorber materials*
S-8	SLO-1	*Tensile strength*	*Analysis of G band Raman spectra*	*Metal support interactions*	*Introduction and application of* VS_2	*Magnetic devices*
	SLO-2	*Physical properties of graphene*	*Raman shift dependence on number of layer*	*Changes in the properties due to metal support interaction*	*Introduction and application of* WS_2	*Materials used*
S-9	SLO-1	*Functional properties of graphene*	*Raman shift dependence on defect*	*Non-metal support interactions*	*Introduction of Si2BN and its application*	*Types of magnetic devices*
	SLO-2	*Chemical properties of graphene*	*Raman shift dependence on doping concentration*	*Difference in properties due to non-metal support interactions*	*Introduction of BCN and its applications*	*Applications of magnetic devices*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Acquire the concepts of supramolecular chemistry*
CLR-2 :	*Utilize designing new materials of metal-organic frame works*
CLR-3 :	*Describe the concept of nanostructured objects*
CLR-4 :	*Understand the principles of supramolecular chirality*
CLR-5 :	*Gain knowledge on host-guest complexes*
CLR-6 :	*Understand the principles sophisticated molecular devices and infinite multicomponent systems*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Recognize the main types of supramolecular assemblies*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Apply the importance of the bottom-up approach to prepare complex (nanoscale) systems*	2	80	70	H	M	M	M	M	M	M	H	M	M	M	H	M	M	M
CLO-3 :	*Identify the main supramolecular forces involved in such systems*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	M	H	H	H
CLO-4 :	*Analyze and understand the intermolecular forces to rationalize the formation of complex nanomaterials.*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Evaluate the needs of sustainable future, develop the supramolecular molecular materials for biological systems*	2	80	70	H	M	H	H	H	M	M	H	M	M	M	M	H	H	H
CLO-6 :	*Apply through feasible approaches, and assemble with the prior knowledge to fabricate novel designs/architectures*	2	80	75	H	M	M	H	M	M	M	H	H	H	M	H	H	M	M

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Basic concepts and principles of supramolecular chemistry*	*Introduction to coordination chemistry*	*Biological inspiration for supramolecular chemistry*	*Supramolecular Chirality*	*Special Class Materials*
	SLO-2	*Classification of supramolecular compounds*	*Hosts for cation binding*	*Alkali metal cations in biochemistry*	*Chirality in Self-Assembled Systems*	*Birth of a new macromolecular chemistry concept*
S-2	SLO-1	*Host-guest compounds*	*Cation receptors*	*Co-ordination Polymers*	*Chirality of Host-Guest Compounds*	*Rational Design*
	SLO-2	*Receptors, coordination compounds*	*Crown ethers*	*Clathrates*	*Chirality of Interlocked Systems*	*Molecular Paneling*
S-3	SLO-1	*Lock and key analogy*	*Cryptands*	*Cavitands*	*Metal Organic Frameworks (MOFs)*	*Artifical Self Replicating Systems*
	SLO-2	*Binding constants*	*Spherands*	*Binding by cavitands*	*Covalent Organic Frameworks*	*Supramolecular reactivity and catalysis*
S-4	SLO-1	*Cooperative effect*	*Calixarens*	*Cyclodextrins*	*Polymorphism*	*The past, present and future of dendrimers and dendrons*
	SLO-2	*Chelate effect*	*Selectivity of cation complex*	*Cucurbituril*	*Solvates*	*Supramolecular assembly of dendrons and dendrimers*
S-5	SLO-1	*Thermodynamic selectivity*	*Macrocyclic effects*	*Porphyrins and tetrapyrrole macrocyles*	*Co-Crystals*	*Synthesis of dendritic polymers*
	SLO-2	*Kinetic selectivity and discriminations*	*Template effects*	*Transport processes*	*Principles of supramolecular Extraction*	*Characterization of dendritic architectural structures*
S-6	SLO-1	*Nature of supramolecular interactions*	*Host for anion binding*	*Dynamic Combinatorial chemistry*	*Extraction technique, the extraction equilibrium*	*Nanomedical and advanced materials*
	SLO-2	*Solvation effects*	*Concepts in anion host design*	*Supramolecular features of plant photosynthesis*	*Examples of supramolecular extraction*	*Diagnostics and advanced imaging*

S-7	SLO-1	*Hydrophobic effects*	*Anion receptors*	*Uptake and transport of oxygen by haemoglobin*	*Binding Constant*	*Characterization of dendritic architectural structures*
	SLO-2	*Supramolecular concepts and design*	*Shape and selectivity*	*Enzymes and coenzymes*	*Binding constant determination by UV/Vis spectroscopy*	*Nanoscience applications*
S-8	SLO-1	*Hydrogen bonding and supramolecular interactions*	*Neutral receptors*	*Neurotransmitters and hormones*	*Instrumentation of mass spectrometry, Limitations of mass spectrometry*	*Molecular and Supramolecular devices*
	SLO-2	*Secondary Electrostatic Interactions in Hydrogen Bonding*	*From cation host to anion host – a simple change in pH*	*Enzymes, Metallobiosites*	*Scanning probe microscopes: - scanning electron microscopy*	*Molecular Electronic Devices*
S-9	SLO-1	*Molecular recognition*	*Hosts for binding of neutral guests*	*Heme analogues*	*Transmission electron microscopy*	*Switches*
	SLO-2	*Types of recognition*	*Inert metal- containing receptors*	*Semiochemistry in natural world, Biochemical self-assembly*	*Confocal laser scanning microscopy*	*Molecular Machines*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Micro and nanoelectro mechanical systems (MEMS and NEMS)*	*Photolithography*	*Principles of sensing and actuation*	*Magnetic materials: properties,*	*Principles of MOEMS technology, Applications*
	SLO-2	*Importance of MEMS in daily life*	*Surface machining, bulk machining, etching*	*Role of microsensors and microactuator with examples*	*Magnetoresistive materials, magnetostrictive materials,*	*Hybrid systems, application, advantages*
S-2	SLO-1	*MEMS and NEMS - Scaling Laws*	*Structural materials*	*Components of mechanical MEMS*	*hard magnetic materials, design considerations in magnetic materials*	*MOEMS components*
	SLO-2	*Conventional electromechanical systems*	*Sacrificial materials*	*Beam, cantilever, microplates*	*Magnetic sensing and design*	*Light modulators, beam splitters, Micro lens,*
S-3	SLO-1	*Mathematical Modeling*	*Thin film deposition, Impurity doping, etching*	*diaphragm structures theory, corrugated diaphragms*	*Presence and direction detection of large object – an example*	*micro mirror, digital micromirror device*
	SLO-2	*Important steps for analysis and design of engineering steps*	*Bulk and surface micromachining*	*Components in sensors*	*Magneto resistive sensor*	*MOEMS devices*
S-4	SLO-1	*Microsensors and microactuators*	*Physical and chemical vapor deposition methods,*	*Capacitive effects, piezo element, piezo mechanics,*	*Principle of magnetoresistive sensor, hall effect, magntrotransitor*	*Optical switch, wave guide and tuning,*
	SLO-2	*Principle of sensing and actuation, capacitive sensors, pressure sensors*	*P and N-type doping in semiconductors, surface machining at macro and microscales.*	*Measurement methods*	*MEMS magnetic sensors and actuators*	*shear stress measurement*
S-5	SLO-1	*Mechanical MEMS, Thermal MEMS*	*Wafer bonding and LIGA, MEMS Assembling and Packaging*	*Strain measurement, pressure measurement*	*Construction of a MEMS magnetic sensor, principle of operation, sensitivity of the sensor*	*Lab-on-a-chip, Important considerations on microscale fluid*
	SLO-2	*Strain measurement*	*Anodic bonding, fusion bonding, Lithography, electroforming and molding.*	*Flow measurement using integrated paddle-cantilever structure*	*Review of RF based Communication syste-I*	*Properties of fluids, density, viscosity, nature of flow, surface tension*
S-6	SLO-1	*MEMS gyroscope, Inchworm technology*	*Basic Modeling elements in mechanical and electrical systems*	*MEMS Gyroscopes*	*Tuners, resonators, switches,*	*Fluid actuation methods,*

	SLO-2	*Thermistors, thermal flow sensors, shape memory alloys*	*Ampler element, mass/inertia element, capacitor, resistor and inductor*	*Shear mode MEMS, principle*	*phase shifters, RF MEMS application area, advantages*	*Dilectrophoresis, electrowetting*
S-7	SLO-1	*MOEMS, Magnetic MEMS, NEMS Architectures*	*Basic Modeling elements in fluid systems*	*Compensation in gyroscope, gripping piezoactuator, design and working principle,*	*Review of RF based Communication system-II*	*Electrothermal flow*
	SLO-2	*Properties of light and their exploitation with respective to MOEMS*	*Inertance, fluid resistance, fluid capacitor*	*Inchworm technology, principle, controlling signal*	*Design scenarios, planer inductor*	*Thermo capillary effect*
S-8	SLO-1	*optical switching, beam splitters and microlenses*	*Thermal systems modeling*	*Thermal sensors and actuators*	*RF MEMS, varactors, tuner/filter*	*Electroosmosis flow*
	SLO-2	*Introduction to RF Communication systems and applications.*	*Thermal capacitance, thermal resistance*	*Thermal energy basics and heat transfer processes,*	*Fabrication process, varactors,*	*Optoelectrowetting*
S-9	SLO-1	*Varactors, RF tuners, filters, switches, phase shifters*	*Translational and rotational pure mechanical systems with spring*	*thermistors, thermocouple, Thermal actuators*	*Tuner/filter, resonator, Resonators*	*Micropumps: design consideration, Microneedle,*
	SLO-2	*Microfluidic systems, Concept of lab-on-a-chip, properties of fluids*	*damper and mass*	*Thermodevices, micromachine thermocouple probe, thermal flow sensors*	*Switches, Phase shifter*	*Construction of a micropump, modeling, working principle*

Course Code	18NTE311T	Course Name	SURFACE AND INTERFACES	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Understand why/how surfaces are important in nanotechnology*
CLR-2 :	*Explain various mechanisms involved in surfaces/interfaces and fundamentals of various types of bonding at surfaces/interfaces*
CLR-3 :	*Describe strategies for manipulating the surfaces and how those strategies help them depending upon the application of such modified surface*
CLR-4 :	*Be familiar with property equations and thermodynamic properties of gas-surface interactions along with the concepts of phase equilibrium of multi component systems*
CLR-5 :	*Acquire the knowledge in Adsorption and desorption kinetics*
CLR-6 :	*Equip with surface-analytical tools such as photoemission spectroscopy, Kelvin probe microscopy, spectroscopy ellipsometry and its significances*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Definition of a Surface and an Interface - its importance/significance*	*The Hierarchy of Equilibrium*	*Adsorption and Desorption Kinetics*	*Structure of Surfaces*	*Electronic Properties at the surfaces*
	SLO-2	*Liquids and Liquid Surfaces*	*Thermodynamics of Flat Surfaces and Interfaces*	*Physiosorption and Chemisorption*	*Surface Crystallography*	*Beyond the Surface Selection Rule*
S-2	SLO-1	*Surface Area to Volume Ratio*	*The Interface Free Energy*	*General Issues of Isotherms*	*Surface stress, Surface energy*	*Correlation between Propagation Length and Surface Roughness*
	SLO-2	*Solids and Solid Surface Roughness*	*Surface Excesses*	*Isosters, and Isobars*	*Relaxation, Reconstruction - Defects*	*Many Body effects*
S-3	SLO-1	*Chemical Heterogeneity of Solid Surfaces - Molecular Interactions*	*Charged Surfaces at Constant Potential*	*The Langmuir Isotherm*	*General Aspects of Surface Lattice Dynamics*	*Surface Plasmons*
	SLO-2	*General concepts of Internal Energy and Free Energy*	*Charged Surfaces at Driven potential*	*Lattice Gas with Mean Field Interaction*	*Diffraction at Surfaces - Surface Superlattices*	*Surface Plasmon/phonon Dispersion and Multipole Excitations*
S-4	SLO-1	*Intramolecular Forces: Formation of a Molecule by Chemical Bonding*	*Maxwell Relations*	*The Fowler-Frumkin Isotherm*	*Defects at surfaces/interfaces – line & point defects*	*Electromagnetic Field Enhancement – Conservation laws for atomic collisions*
	SLO-2	*Interatomic forces, bonds - Molecular geometry*	*Their Applications*	*Reduction to the Langmuir Isotherm*	*Vibrational Excitations at Surfaces - Surface Phonons of Solids*	*Empty and image – potential surface states*
S-5	SLO-1	*Dipole moments*	*Solid and Solid interfaces*	*Experimental Determination of the Heat of Adsorption*	*Surface Stress and the Nearest Neighbor Central Force Model*	*Scattering of Light at Rough Surfaces- From Nanowires to Quantum Conduction*
	SLO-2	*Intermolecular Forces and Potential Energies*	*Solid-Liquid Interfaces*	*Underpotential Deposition*	*Surface Phonons in the Acoustic Limits*	*Classical limit of particle scattering*

S-6	SLO-1	*Coulomb Interactions*	*Step Line Tension*	*Symmetry of Adsorption Sites -*	*Diffusion at Surfaces*	*Linear Optical Techniques at Surfaces and Interfaces*
	SLO-2	*Polar Interactions*	*Stiffness at its interfaces*	*Vibrational Frequencies of Isolated Adsorbates*	*Observation of Single Atom Diffusion Events-Statistics of Random Walk*	*Spectroscopic Ellipsometry (SE)*
S-7	SLO-1	*van der Waals Interactions*	*Equilibrium Fluctuations of Line Defects and Surfaces*	*Desorption - Desorption Spectroscopy*	*Absolute Rate Theory*	*Reflection Difference Techniques (Surface Differential Reflectivity (SDR)*
	SLO-2	*Induction effects*	*The Terrace-Step-Kink Model - Basic Assumptions and Properties*	*Theory of Desorption Rates*	*Calculation of the Pre-factor*	*Reflection Anisotropy Spectroscopy (RAS))*
S-8	SLO-1	*Collective phenomena at interfaces – Superconductivity*	*Step-Step Interactions on Vicinal Surfaces*	*Specific Adsorption of Ions*	*The Ehrlich-Schwoebel Barrier- The Concept of the Ehrlich-Schwoebel Barrier*	*Probing occupied and unoccupied states - Photoemission spectroscopy, surface states*
	SLO-2	*Superconductivity at interfaces – A simple model for transport through normal-superconductor interface*	*The Ising-Model*	*Specific Adsorption of molecules*	*Mass Transport on Stepped Surfaces*	*General Aspects of inverse photoemission*
S-9	SLO-1	*Collective phenomena at interfaces - Ferromagnetism*	*Application to the Equilibrium Shape of Islands*	*The Chemical Bond of Adsorbates of Hydrogen, Oxygen molecules*	*The Kink Ehrlich-Schwoebel Barrier*	*Work Function changes induced by the adsorbates – 2D phase transition*
	SLO-2	*Ferromagnetism at interfaces- Magnetic layer coupling*	*Simple Solutions for the Problem of Interacting Steps*	*The Chemical Bond of Adsorbates of Water, Hydrocarbons*	*The Atomistic Picture of the Ehrlich-Schwoebel Barrier*	*Kelvin Probe measurements for the study of work-function changes*

Course Code	18NTE312T	Course Name	NANOTECHNOLOGY IN FOOD PRODUCTION	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Know the various types of interactions at molecular scale*
CLR-2 :	*Understand the effect of nanoparticles on agricultural methodology and food technology*
CLR-3 :	*Gain knowledge of the types diagnostic tools using nanotechnology*
CLR-4 :	*Acquire knowledge about the newer technologies in the food production*
CLR-5 :	*Get familiarized with the new concepts of Nano Science in the packaging industries and food production*
CLR-6 :	*Know the toxic effect of nanomaterials used in food processing and technology*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Apply the concept of interactions with in the supramolecular structures at molecular scale*	2	80	75	M	M	H	M	M	H	H	H	H	H	H	H	H	H	H
CLO-2 :	*Utilize the assay techniques in agricultural and food diagnostics*	2	80	70	M	H	M	M	M	H	H	H	M	H	H	H	M	M	M
CLO-3 :	*Apply the concepts of nanotechnology in food products*	2	75	70	H	M	M	M	M	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Engineer food ingredients which are capable to improve the bioavailability*	2	80	75	H	H	H	M	M	M	H	H	M	H	H	H	H	H	H
CLO-5 :	*Select the preferred packaging materials for various food products*	2	80	70	M	H	M	M	M	M	M	H	M	H	H	H	H	H	H
CLO-6 :	*Assess the toxic effects of the nanomaterials used in the food processing and technology*	2	80	75	M	H	M	M	M	M	M	H	M	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Intermolecular interactions and supermolecular structures – Introduction*	*Nanotechnology in Agriculture and Food diagnostics*	*Food products and its production – Introduction*	*Nanotechnology in Crop management - Introduction*	*Toxicology of Nanomaterials in food - Introduction*
	SLO-2	*Water - hydrophobic and hydrophilic interactions*	*Nanodiagnostic approaches in detecting microbial agents*	*Food and new ways of food production*	*Crop improvement - reasons to package food products*	*Characterization of engineered nanomaterials*
S-2	SLO-1	*dispersion interaction, electrostatic interactions*	*Biosensors, Enzyme biosensors and diagnostics*	*Need for new food processing methods*	*Physical properties of packaging materials*	*Unique issues for characterization of engineered nanomaterials for food applications*
	SLO-2	*Atoms and small molecules*	*DNA-based biosensors and diagnostics*	*Efficient fractionation of crops*	*Strength*	*Safety assessment of oral-exposure engineered nanomaterials for food application*
S-3	SLO-1	*Polymers, particles, and surfaces*	*Radiofrequency identification*	*Efficient product structuring*	*Barrier properties*	*Experimental design considerations for toxicology studies*
	SLO-2	*Introduction to Steric interactions*	*Integrated nanosensor networks: Detection and Response*	*Optimizing Nutritional value*	*light absorption*	*Life cycle of nanotechnology food products*
S-4	SLO-1	*Steric interactions involving soluble polymers*	*Electrochemical biosensors – Gold Nanoparticles*	*Nanotechnology in Food Production*	*structuring of interior surfaces*	*Environmental behavior of nanoparticles - Toxicology of nanoparticles*
	SLO-2	*Aggregation*	*Magnetic Nanoparticles in diagnostics*	*Applications of nanotechnology in foods*	*Antimicrobial functionality*	*Molecules in foods involved in triggering allergies*
S-5	SLO-1	*Depletion aggregation of particles by non-adsorbing polymers*	*Fluorescent Nanoparticles in diagnostics*	*Sensing, packaging*	*Visual indicators*	*Impact of nanoscale structures on allergenic potential of foods*
	SLO-2	*Bridging aggregation of particles by adsorbing polymers*	*Silica Nanoparticles in diagnostics*	*Encapsulation*	*Quality assessment*	*Toxicokinetics*
S-6	SLO-1	*Stabilization of dispersed particles by adsorbing polymers*	*Safety of nanotechnology in food and the impact in consumer health*	*Nano Engineering food ingredients to improve bioavailability*	*Food safety indication*	*Adme (absorption)*

	SLO-2	*Polymer brushes to prevent particle aggregation and particle deposition at surfaces*	*Transduction Principles*	*Nanocrystalline food ingredients*	*Product properties*	*Adme (distribution)*
S-7	SLO-1	*Self Assembly*	*Microfluidic Assays*	*Nano-emulsions*	*Information and Communication technology*	*Adme (metabolism)*
	SLO-2	*Organized self-assembled structures*	*Lateral flow (immuno) assay*	*Nano-engineered protein fibrils as ingredient building blocks*	*Sensors*	*Adme (excretion)*
S-8	SLO-1	*Langmuir layers*	*Nucleic acid lateral flow (immuno) assay*	*Preparation of food matrices*	*Radiofrequency identification technology*	*Toxicodynamics*
	SLO-2	*Lipid bilayers*	*Flow-through (immuno) assays*	*Risks of Nanotechnology*	*Health Risks*	*In vivo toxicity*
S-9	SLO-1	*Solid-supported lipid bilayers*	*Antibody microarrays*	*Concerns about using nanotechnology in food production*	*Environmental Risks*	*In vitro toxicity*
	SLO-2	*Micelles, Vesicles*	*Surface plasmon resonance spectroscopy*	*Rational argumentation versus Human feelings*	*Consumer and societal acceptance*	*Study Reliability*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Drug delivery systems*	*Targeted drug delivery system*	*Metal nanoparticles for drug delivery*	*Cancer therapy*	*Theranostic metal nanoshells*
	SLO-2	*Traditional drug delivery*	*Site specific drug release*	*Gold based drug delivery systems*	*Drug delivery to cancer*	*Photothermally-modulated drug delivery using nanoshell*
S-2	SLO-1	*Advantages and disadvantages of various traditional drug delivery systems*	*Types of drug targeting*	*Multifunctional nanoparticles*	*Targeted drug delivery to cancer*	*Hydrogels*
	SLO-2	*Modes of drug delivery*	*Active targeting*	*Multifunctional gold nanoparticles for drug delivery and imaging*	*Enhanced permeability and retention*	*Nanoporous systems for drug delivery*
S-3	SLO-1	*Routes of administration*	*Passive targeting*	*Virus based drug delivery system*	*Cancer markers*	*Molecularly-derived therapeutics*
	SLO-2	*Novel drug delivery system*	*Barriers for drug targeting*	*Polymeric nanoparticles*	*Folate receptor*	*transdermal drug delivery*
S-4	SLO-1	*Pharmacokinetics*	*Strategies for site specific drug delivery*	*Classifications of polymers*	*Angiogenesis*	*low-frequency sonophoresis*
	SLO-2	*ADME studies*	*Receptors*	*Polymer micelles*	*Leaky vasculature*	*implants for controlled drug delivery*
S-5	SLO-1	*Kinetics of drug delivery*	*Ligands*	*Synthesis of polymeric nanoparticles for drug delivery*	*Cancer specific targeting*	*Responsive release system*
	SLO-2	*Zero order kinetics*	*Antibodies based drug delivery*	*Dentrimers*	*Combinational therapy*	*Fabrication and Applications of Microneedles*

S-6	SLO-1	*First order kinetics*	*Metabolism based drug delivery*	*Magnetic nanoparticles for drug delivery*	*Neutron capture therapy*	*Micropumps*
	SLO-2	*Mixed order kinetics*	*Surface modification of nanoparticles*	*Nanoscaffolds*	*Targeting tumor vasculature for imaging*	*microvalves*
S-7	SLO-1	*Controlled drug delivery*	*Bioconjugation of nanoparticles*	*CNT in drug delivery*	*Anticancer drugs*	*Implantable microchips*
	SLO-2	*Mechanism of controlled drug release*	*PEGylation of nanoparticles*	*Liposomes*	*Pharmacodynamics*	*Quantum Dot Probes*
S-8	SLO-1	*Therapeutic index*	*reticuloendothelial system*	*Protein drug delivery*	*Photothermal therapy*	*Applications Nano biotechnologies for Single-Molecule Detection*
	SLO-2	*Drug release profile*	*Opsonaization*	*Gene delivery*	*Cancer imaging*	*Nanorobots*
S-9	SLO-1	*Rate controlled drug delivery*	*Renal clearance*	*Gene transfection*	*Nanoparticle–Aptamer Conjugates for Cancer Cell Targeting and Detection.*	*Drug delivery to Central Nervous systems*
	SLO-2	*Time controlled drug delivery*	*Steric repulsion*	*Methods of gene transfection*	*Fluorescent Silica Nanoparticles for Tumor Imaging-*	*Drug delivery across Blood brain barrier*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Carbon nanotubes for Bone regeneration*	*Biocompatibility of traditional medical implants*	*Introduction to biomedical imaging*	*Drug delivery to CNS*	*3D Bioprinting – introduction*
	SLO-2	*Carbon nanotubes for Electroporation*	*Adhesive interactions with implant surfaces*	*Types of biomedical imaging*	*Drug delivery across blood brain barrier (BBB)*	*3D Bioprinting uses*
S-2	SLO-1	*Hexagonal array of gold nanorods*	*Nanorobot immunoreactivity*	*The emergence of nanoparticles as imaging platform in biomedicine*	*EEG for monitoring brain activity*	*Types of 3D bioprinting*
	SLO-2	*Gold nanorods in sensing*	*Nanopyrexia*	*Magnetic resonant imaging- principle and techniques*	*Nanowires for monitoring brain activity*	*3D Bioprinting technologies: ink jet based*
S-3	SLO-1	*Isohelical DNA-binding oligomers*	*Mutagenicity*	*Magnetic resonant imagingworking methodology*	*Neuroregeneration*	*Pressure assisted*
	SLO-2	*Nanospearing- multifunctional glyco-nanoparticles*	*Carcinogenicity*	*Magnetic resonant imaging-Paramagnetic contrast agents*	*Neurosurgery*	*Laser assisted*
S-4	SLO-1	*Nanoarchitecures*	*Thermocompatibility*	*USPIOS for imaging*	*Nanoneurosurgery*	*Solenoid valve based*
	SLO-2	*Nanoconstructions based on spatially ordered nucleic acid molecules*	*Mechanocompatibility*	*SPIOS for imaging*	*Lipoblockers*	*Acoustic jet based*
S-5	SLO-1	*DNA self assembly*	*Cell membrane disruption*	*MPIOS for imaging*	*Nanolipoblockers - antirestenosis drugs*	*Challenges of 3D bio printing*
	SLO-2	*DNA self-assembling nanostructures induced by trivalent ions*	*Systemic nanoparticle distribution*	*Magnetic nanosensors*	*Myocardial Infraction conventional therapy*	*Future development of 3D bio printing*
S-6	SLO-1	*Assembling by polycations*	*Nanoparticle phagocytosis*	*Nanosensors- radio labeled nanoparticles*	*Cell therapy for myocardial infarction*	*Nanoparticles sensors*
	SLO-2	*Wang tiles*	*Nanomaterial volumetric intrusiveness*	*Ultrasound imaging*	*Stem cell types*	*Calorimetric sensing*

S-7	SLO-1	*Biological examples of Nanomotors and devices*	*Intusiveness of Nanobots*	*Acoustically reflective nanoparticles*	*Regeneration of the cardiovascular system*	*Vapor phase sensing*
	SLO-2	*ATPase motor*	*Nanobiotechnology in tissue engineering*	*Acoustically reflective nanoparticles: application in ultrasound imaging*	*Nanobone implants*	*Raman sensing at surfaces*
S-8	SLO-1	*Kinesine motor*	*Nanobiotechnology for organ replacement*	*Iodinated liposomes*	*Nanobone scaffolds*	*Electro analytical sensing*
	SLO-2	*Dynein motor*	*Liver and kidney transplant*	*Application of Iodinated liposomes*	*Nanoparticle drug formulations for spray inhalation - wound healing*	*Plasma sensing*
S-9	SLO-1	*Polymer-based capsules*	*Nanobiotechnology for assisted function*	*Quantum dots*	*Nanogeriatrics*	*Optical sensing*
	SLO-2	*Oral drug delivery*	*Organ assists*	*Quantum dots in optical imaging*	*Orthodontal application*	*Sensors for cancer detection*

Learning Resources	1. *Understanding Nanomedicine: An Introductory Textbook by Rob Burgess. 2012 CRC Press* 2. *Nanomedicine for Drug Delivery and Therapeutics, Editor(s): Ajay Kumar Mishra, 2013, Wiley*	3. *Medical Nanotechnology and Nanomedicine by Harry F. Tibbals. 2010 by CRC Press* 4. *Introduction to Nanomedicine and Nanobioengineering, by Paras N. Prasad. 2012, Wiley*

Course Code	18NTE315T	Course Name	MICROELECTRONICS AND VLSI	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	*The purpose of learning this is to:*
CLR-1 :	*Acquire knowledge on importance of microelectronics*
CLR-2 :	*Understand the physical effects of semiconductor-semiconductor junction, its electrostatics, device and circuit level operation*
CLR-3 :	*Acquire knowledge on digital language of Boolean algebra, basics of logic gates for advanced memory applications*
CLR-4 :	*Learn process flow of CMOS IC fabrication, circuit formation and its operation*
CLR-5 :	*Understand intricacies of designing micro/nanoscale rules, flow of fabrication and IC testing principles*
CLR-6 :	*Acquire knowledge on power consumption and optimization of on-chip devices, its analysis on performance*

Learning Outcomes (CLO):	*At the end of this , learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Interpret difference between macro and micro electronics*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Apply basic semiconductor physics which is important to understand the working of semiconductor-semiconductor junctions, device and circuit level operation*	2	80	70	H	M	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Analyze various number systems of Boolean algebra, operation of logic gates and memory circuits*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	M	H	H	H
CLO-4 :	*Elucidate process flow of CMOS based logic devices, circuit formation and its operation*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Designing steps in VLSI, rules, flow of fabrication and IC testing at high frequency*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	H	H	H	M
CLO-6 :	*Analyze power consumption and need for optimization in on-chip devices, its effect on switching speed*	2	80	75	H	M	M	H	M	M	M	H	H	M	M	H	M	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to classification of materials*	*Number systems*	*Introduction to IC Technologies*	*Overview of VLSI design methodologies*	*Usage of power in IC*
	SLO-2	*Types of semiconductors*	*Binary and octal numbering*	*Needs of VLSI*	*Needs of designing*	*Overview of power consumption, low and high power in VLSI chips*
S-2	SLO-1	*Concept of energy band gap*	*Hexadecimal numbering*	*VLSI design styles*	*Steps in designing*	*On-chip capacitors*
	SLO-2	*Doping in semiconductors*	*Conversions between number systems*	*Layout rules*	*Cascading of process*	*Charging and discharging of capacitor*
S-3	SLO-1	*Formation of p-n junction*	*Boolean algebra*	*Introduction to Complementary Metal Oxide Semiconductor (CMOS)*	*Introduction to MOFET*	*Currents and voltages in CMOS short circuits*
	SLO-2	*Electrostatics of junction operation*	*Logic gates*	*VLSI for CMOS*	*VLSI for MOSFET*	*Leakage current, static current*
S-4	SLO-1	*Diode as circuit element*	*Truth tables for AND, OR, NOT gates*	*Positive channel MOS (PMOS) and negative channel MOS (NMOS)*	*DC operation of MOSFET*	*Gate-level- architecture*
	SLO-2	*Basics of bipolar and unipolar junction transistors*	*Truth tables for NAND, NOR gates*	*BiCMOS and applications*	*AC operation of MOSFET*	*transistor and gate sizing*
S-5	SLO-1	*Current-voltage characteristics and operation of transistors*	*Circuits with logic gates*	*CMOS inverter*	*Modelling of MOSFET*	*Power analysis*

	SLO-2	*Ebers-Moll representation of transistor for circuit element*	*combinational circuits and sequential circuits*	*CMOS logic circuits*	*Small signal model*	*Data correlation analysis*
S-6	SLO-1	*AC operation of transistor*	*Flip-flops*	*Combinatorial CMOS Logic*	*Need of high frequency operation*	*Random logic signals, signal entropy*
	SLO-2	*Small signal model*	*SR and JK flip-flops*	*pMOS and nMOS in logic operation*	*high frequency MOSFET models*	*Switching activity analysis*
S-7	SLO-1	*Small signal model for bipolar junction transistor (BJT)*	*Basics of counters*	*D-latch*	*Testing of transistor*	*Parallel architecture*
	SLO-2	*Small signal model for junction field effect transistor (JFET)*	*Asynchronous and synchronous counters*	*CMOS for D-latch*	*Need for testing*	*Digital CMOS circuits*
S-8	SLO-1	*Amplifiers*	*Overview of memory devices*	*Triggering of flip-flops*	*Testing principles*	*CMOS amplifiers*
	SLO-2	*Transistor connections in various modes*	*Logic gates for memory applications*	*Edge triggered Flip Flops*	*design for testability*	*CMOS amplifier topologies*
S-9	SLO-1	*Feedback concept*	*Read only memory*	*Transistor logic*	*Error analysis*	*Common-Source topologies*
	SLO-2	*Ideal F/B amplifiers*	*Random access memory*	*Pass transistor circuits*	*Safety in testing*	*Parallel architecture with voltage reduction*

Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Understand the physics of electronic materials*
CLR-2 :	*Familiarize different physical properties of electronic materials*
CLR-3 :	*Know-how the various processes in electronic materials*
CLR-4 :	*Understand the physics behind the working of electronic materials based devices*
CLR-5 :	*Gain a fundamental understanding of the emerging electronic materials*
CLR-6:	*Know new materials other than Si etc and future technology roadmap*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Use knowledge of physics to understand the properties of electronic materials*	2	80	75	M	M	H	H	M	H	H	M	M	H	M	H	H	H	H
CLO-2 :	*Analyze different mechanisms that determine the properties of electronic materials*	2	80	70	H	M	H	H	M	M	M	M	M	H	L	H	M	M	M
CLO-3 :	*Determine the applications of electronic materials based on their properties*	2	75	70	M	L	H	H	H	H	H	H	M	H	M	H	H	H	H
CLO-4 :	*Evaluate the material characteristics by applying laws of physics*	2	80	75	H	H	H	H	H	H	H	M	M	H	M	H	H	M	M
CLO-5 :	*Develop in depth understanding of the physical processes of electronic materials*	2	80	70	H	M	H	H	H	H	H	H	M	H	M	H	H	M	M
CLO-6 :	*Distinguish how materials are classified and their applications*				M	M	M	M	L	M	M	H	H	H	H	M	H	M	M

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Defining characteristics and classification of semiconductors*	*Concept of relative permittivity*	*Definition of magnetic dipole moment*	*Optical properties of materials*	*Thermal properties of materials*
	SLO-2	*Fundamentals of band theory of semiconductors*	*Electric dipole moment and polarizability*	*Orbital and spin magnetic moment of an electron*	*Refractive index, Refractive index-wavelength behavior*	*Atomistic theory of heat capacity*
S-2	SLO-1	*Intrinsic semiconductors*	*Polarization vector and charge density*	*Magnetization vector*	*Snell's law and total internal reflection*	*Quantum mechanical considerations*
	SLO-2	*Energy band diagram and carrier movement*	*Electric susceptibility and relative permittivity*	*Definition of magnetic susceptibility and magnetic permeability*	*Case study: fiber optics and LEDs*	*Einstein and Debye model*
S-3	SLO-1	*Conductivity of a semiconductor*	*Lorentz field in dielectrics*	*Magnetic materials classification*	*Interaction of photons with materials*	*Electronic contribution to the heat capacity*
	SLO-2	*Electron and hole concentrations*	*Clausius-Mossotti equation*	*Dia-, para-, ferro-, antiferro-, and ferrimagnetism*	*Absorption, transmittance and reflection*	*Heat capacity and specific heat*
S-4	SLO-1	*Extrinsic semiconductors*	*Electronic polarization in covalent solids*	*Origin of ferromagnetism and exchange interaction*	*Antireflection coatings on solar cells*	*Thermal expansion and thermal conductivity*
	SLO-2	*Concepts of p-type, n-type and compensation doping*	*Ionic, dipolar, interfacial and total polarization*	*Saturation magnetization and curie temperature*	*Dielectric mirrors*	*Thermal conductivity in metals, alloys, and dielectrics*
S-5	SLO-1	*Energy band diagram and electron and hole concentrations*	*Concept of dielectric loss*	*Magnetic domains and domain walls*	*Band to band absorption*	*Thermoelectricity in metals*

	SLO-2	Estimation of the position of the Fermi energy and the resistivity	Dielectric studies and the Cole-Cole plot	Magnetostriction and domain wall motion	Direct and indirect transitions	Seebeck effect and the figure-of-merit
S-6	SLO-1	The temperature dependence of carrier concentration	Dielectric strength and insulation breakdown	Magnetic domains in polycrystalline materials	Light scattering in materials, attenuation in optical fibers	Thermoelectricity in semiconductors
	SLO-2	The temperature dependence of drift mobility	Dielectric breakdown mechanisms	Understanding the M versus H hysteresis curve	Luminescence, phosphors, and white LEDs	Overview of thermoelectric devices
S-7	SLO-1	Degenerate and nondegenerate semiconductors	Capacitor dielectric materials	Demagnetization	Spontaneous and stimulated emission	Two-dimensional electronic materials
	SLO-2	Direct and indirect recombination	Typical capacitor constructions	Soft and hard magnetic materials: Examples and uses	Laser materials and laser action	The Era of graphene and related materials
S-8	SLO-1	Minority carrier life time	Piezoelectricity	Superconductivity, Type I and Type II superconductors	Concept of photoluminescence and electroluminescence	Electronic properties at 2D limit
	SLO-2	Carrier injection and diffusion	Piezoelectric spark generator and quartz crystal	Critical current density and superconducting solenoids	Examples for devices working on the principles of PL and EL	Optical properties- layer dependence
S-9	SLO-1	Optical absorption in semiconductors	Ferroelectricity and pyroelectricity	Josephson effect	Electro-optic effects and applications	2D materials based metal, semiconductor and dielectrics
	SLO-2	Direct and indirect band gap semiconductors and the E-k diagram	Practical Applications	Introduction to anisotropic and giant magnetoresistance	Magneto-optic effects and applications	Applications and future perspectives

Course Code	18NTE317T	Name	NANOCATALYSTS	Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Aquire the concepts of chemistry of nanocatalyst*
CLR-2 :	*Understand the catalytic kinetics*
CLR-3 :	*Describe the reaction kinetics of adsorption and desorption processes*
CLR-4 :	*Understand the principles behind the synthesis of nanocatalyst*
CLR-5 :	*Gain knowledge about the working mechanism of nanocatalytic materials*
CLR-6 :	*Describe catalytic processes at nano-levels*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Describe the mechanisms of nanomaterials for using as catalyst*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Apply the importance of the bottom-up approach to prepare nanomaterials*	2	80	70	H	M	M	H	M	M	M	H	M	H	L	H	M	M	M
CLO-3 :	*Identify the photocatalyst for environmental remediation*	2	75	70	H	M	H	H	M	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Analyze the working of noble metal nanocatalyst*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Evaluate the needs and future possibilities of nanocatalyst*	2	80	70	H	M	H	H	H	M	M	H	M	H	L	H	H	H	H
CLO-6 :	*Apply isotherms for different micro and nano porous catalytic materials*	2	80	75	H	M	M	H	M	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to catalysis*	*Adsorption and Desorption Processes*	*Kinetics and photocatalytic activity*	*Catalyst in Nanoscale*	*Applications of Nano-Catalyst*
	SLO-2	*Classifications*	*Adsorption Rate*	*Introduction to photocatalyst*	*Noble metals nanocatalyst (Ru, Rh, Pd, Pt, etc)*	*Toxic Gases conversion using nanocatalyst: NOx*
S-2	SLO-1	*heterogeneous catalysis*	*Desorption Rate*	*Basics of electrochemistry*	*Polymer stabilized Rh and Ru nanoparticles*	*CO oxidation using nanocatalyst*
	SLO-2	*Reaction on the solid surfaces*	*Catalytic activity (bulk and nanoscale)*	*Photochemistry*	*Oxide supports for nano-catalysts; carbon supports for nano-catalysts*	*Hydrogenation of compounds with C≡C bonds, hydrogenation of aromatic compounds*
S-3	SLO-1	*Active sites- Activation energy*	*Catalytic activity determination for metal/metal oxide nanostructures*	*Electronic structure and photoabsorption*	*Gold nanoparticle-based catalyst*	*Green house gases: CO2 conversion*
	SLO-2	*Adsorption isotherms*	*Langmuir-Hinshelwood mechanism for nanocatalyst*	*Jablonskii diagram*	*Gold vs. Palladium catalysts for the aerobic oxidation of alcohols*	*Dissociative mechanism: oxygen reduction reaction using nanocatalyst*
S-4	SLO-1	*Physisorption and chemisorptions*	*Mass transport*	*Structure of photocatalysts*	*Oxide based catalyst*	*Associative mechanism: oxygen reduction reaction using nanocatalyst*
	SLO-2	*Brunauer-Emmett-Teller (BET) theory*	*Diffusion controlled process*	*Solar spectrum*	*Metal free catalyst (CNT, Graphene based Catalyst)*	*Hydrogen Production using oxide and dichalcogenides based catalyst*
S-5	SLO-1	*Total surface area*	*Adsorption equilibrium on uniform surfaces-Langmuir isotherms single-site (non-dissociative) adsorption*	*Fundamental understanding of semiconductor interfaces*	*Transition metal dichalcogenides based catalyst*	*Energy processing: Processes involved in crude oil refinery*
	SLO-2	*Pore volume and pore size distribution*	*Dual-site (dissociative) adsorption*	*Principles and relevance to photoelectrochemical mechanism*	*Microporous materials: Zeolites- Zeotypes*	*Gasoline production*
S-6	SLO-1	*Hg porosimetry method*	*Derivation of the Langmuir isotherm*	*Photocatalysis mechanism*	*Overall steps in zeolite crystallization*	*Cracking*

	SLO-2	*N2 adsorption-desorption method*	*Adsorption equilibrium on non-uniform surfaces-Langmuir isotherms*	*Properties of good photocatalysts*	*Zeolite synthesis via.- dry gel route*	*Fuel cell*
S-7	SLO-1	*Reaction mechanism*	*The Freundlich isotherm*	*Advantages of photocatalysts*	*Zeolite Y- determination of surface acidity-*	*Biomass gasification*
	SLO-2	*Kinetics of the heterogeneous catalytic reactions*	*The Temkin Isotherm*	*Types of photocatalysts*	*Shape-selectivity*	*Biodiesel*
S-8	SLO-1	*Activation energy (Arrhenius equation, Eyring equation)*	*Activated adsorption*	*Homogeneous and heterogeneous photocatalyst*	*Synthesis of Mesoporous Silica MCM-41*	*Photocatalyst for self cleaning*
	SLO-2	*Terminology in catalysis, TO(Turnover),TON(Turnover number), TOF(Turnover frequency)*	*Catalytic efficiency*	*Carbonaceous photocatalysts.*	*Mesoporous Carbon*	*Purification of water and air*
S-9	SLO-1	*Sequences involved in a catalysed reaction*	*Application of metal nanoparticles in organic reactions*	*Plasmonic photocatalysts.*	*Sulfated Zirconia*	*Environmental remediation*
	SLO-2	*Asymmetric synthesis using a catalyst*	*Environmental remediation*	*Application of photocatalyst*	*Ag/SiO$_2$ composite nanocatalysts*	*Future possibilities*

Course Code	18NTE318T	Course Name	NANO AND MICRO EMULSIONS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Acquire knowledge on micro and nano emulsion and its stability*
CLR-2 :	*Understand the various properties of emulsion*
CLR-3 :	*Describe the concept of Mechanism of Emulsification*
CLR-4 :	*Understand the formulation of Nano emulsion*
CLR-5 :	*Learn the applications of emulsion for various fields*
CLR-6 :	*Understand the principles of NMR and Ultrasound characterization*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual &Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Explore basic principles in chemistry of microemulsions*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	M	H	H	H
CLO-2 :	*Explainproperties of emulsion by concept of phase diagram*	2	80	70	H	M	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Analyze the stabilization mechanism in emulsions*	2	75	70	H	M	H	H	H	H	H	M	H	M	H	H	H	H	H
CLO-4 :	*Apply the formulation of micro and nano emulsions*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	M	H	H	H
CLO-5 :	*Elucidate importance of emulsions in various technological applications*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6 :	*Utilize the knowledge on formulation and characterization of microemulsions*	2	80	75	H	M	M	H	M	M	M	M	H	H	M	H	H	M	M

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to Emulsion*	*A phase diagram approach to microemulsion*	*Mechanism of Emulsification*	*Nanoparticle formation in microemulsion*	*Characterization and Application of Microemulsion*
	SLO-2	*Introduction to Micro and Nano Emulsion*	*Partial generic phase diagram*	*Surface forces*	*Concept of formation in microemulsion:*	*Introduction in basics and principles of NMR*
S-2	SLO-1	*Definition of micro emulsion*	*Microemulsion formation*	*Van der walls interactions*	*Chemical Reaction*	*NMR technique for measurement emulsion*
	SLO-2	*Definition of nano emulsion*	*Ordering and disordering*	*Electrical interactions*	*Nucleation*	*Relaxation measurements on emulsions via CPMG experiments*
S-3	SLO-1	*Theory of emulsion and methods*	*Temperature Dependence of microemulsion ordering*	*Phase inversion phenomena*	*Exchange mechanism in emulsions*	*Diffusion measurements on emulsions via PGSE andPGSTE experiments*
	SLO-2	*Theory of Micro emulsions*	*Vapor Composition from Microemulsions*	*Phase behaviorsof emulsions*	*Autocatalysis*	*Introduction and basics of ultrasound*
S-4	SLO-1	*Theory nano emulsions*	*Ekwall on the association structures*	*Standard inverse boundary*	*Mechanism of microemulsion*	*Ultrasound characterization for emulsion*
	SLO-2	*Preparation of microemulsion*	*Water–surfactant combination*	*Dynamic inversion*	*Critical Nucleus Size*	*Ultrasound characterization for microemulsion*
S-5	SLO-1	*Preparation of nano emulsion*	*Physicochemistry of W/O microemulsion formation*	*Dynamic behavior of emulsion*	*Chemical Reaction Rate*	*General features of acoustic measurement*
	SLO-2	*Winsor's classification of microemulsions*	*Stability of emulsions*	*Spontaneous emulsification*	*Nanoparticles uptake from W/O emulsion*	*Acoustic measurements on emulsions*
S-6	SLO-1	*Stability of micro emulsions*	*Droplet clustering*	*Recent development with emphasis on self emulsification,*	*W/O emulsion process*	*Physicochemical characterization and characterization techniques types*

	SLO-2	*Rheology of microemulsion drops*	*Energetics of Droplet Clustering*	*Self-emulsification process*	*Nanoparticle Uptake in Reactive Surfactant Systems*	*Pharmaceutically applicable microemulsions*
S-7	SLO-1	*Applications of emulsions*	*Phenomenon in microemulsion*	*Organic Reactions in Emulsions*	*Nanoparticle Uptake in Nonreactive Surfactant Systems*	*Places of microemulsion and emulsion in cancer therapy*
	SLO-2	*Ostwald ripening*	*Percolating phenomenon in microemulsion*	*Microemulsions*	*TiO_2 nanoparticle in micro-emulsion and photophysical properties*	*In vitro and in vivo evaluation*
S-8	SLO-1	*Flocculation*	*Scaling Laws*	*Symmetric thin liquid film with Fluid interfaces*	*Optical Absorption and Emission of TiO_2 Nanoparticles in Microemulsion*	*Biocatalysis in microemulsion*
	SLO-2	*Coalescence of drops*	*Effect of external entity-Microemulsions with mixed nonionic surfactants*	*Formation emulsified microemulsion*	*Electron Transfer Dynamics in Catechol-Sensitized TiO_2 Nanoparticles*	*Biofluidic Matrices*
S-9	SLO-1	*Applications of emulsions*	*Organ chalcogenides,Aromatic Heterocyclic Compounds*	*Microemulsion properties*	*Properties of interfacial electron transfer dynamics*	*Microemulsions as Decontamination Media for Chemical weapons*
	SLO-2	*Different application of micro and Nano emulsions*	*Properties of microemulsions with mixed nonionic surfactants*	*Characterization of emulsified microemulsion*	*Interfacial electron transfer dynamics*	*Microemulsions as toxic Industrial Chemicals*

Course Code	18NTE401T	Course Name	NANOROBOTICS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Provide an insight into the fundamentals of nanorobotics manipulation and assembly*
CLR-2 :	*Gain scientific understanding regarding the role of nanorobotics in the modern engineering applications*
CLR-3 :	*Understand the concept of nanomanipulation of nanostructures*
CLR-4 :	*Learn the techniques of automated manipulation of nanoobjects*
CLR-5 :	*Gain knowledge on theoretical and experimental aspects of Nanorobotics*
CLR-6 :	*Understand the principles of nanomicroscopy*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Apply the scientific concepts underlying engineering and technological applications in nanorobotics*	*2*	*80*	*75*	*H*	*M*	*H*	*H*	*H*	*M*	*M*	*H*	*H*	*M*	*M*	*H*	*H*	*H*	*H*
CLO-2 :	*Acquire the knowledge of nanorobotics manipulation*	*2*	*80*	*75*	*H*	*M*	*M*	*M*	*M*	*M*	*M*	*H*	*M*	*H*	*M*	*H*	*M*	*M*	*M*
CLO-3 :	*Apply the knowledge of fast imaging system for advance nanotechnology applications*	*2*	*75*	*70*	*H*	*M*	*H*	*H*	*H*	*H*	*H*	*M*	*H*	*H*	*H*	*M*	*H*	*H*	*H*
CLO-4 :	*Get familiarize with the new concepts of real-time nanomanipulation*	*2*	*75*	*70*	*M*	*H*	*H*	*M*	*H*	*H*	*H*	*H*	*H*	*M*	*M*	*H*	*H*	*H*	*H*
CLO-5 :	*Apply the concept of nanorobotics assembly using CAD*	*2*	*75*	*70*	*H*	*M*	*H*	*H*	*H*	*M*	*M*	*H*	*M*	*H*	*M*	*M*	*H*	*H*	*H*
CLO-6 :	*Utilize the concept of nanobots for Medical applications*	*2*	*80*	*75*	*H*	*M*	*M*	*H*	*M*	*M*	*M*	*H*	*H*	*H*	*M*	*H*	*H*	*M*	*M*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Types of interaction forces*	*Dieelectric materials*	*Sensors-classifications*	*computer-aided design (CAD)*	*Nanorobotic- introduction*
	SLO-2	*Interaction forces in nanomanipulation*	*Dielectric polarization*	*Art of compressive sensing*	*CAD models of nanostructures*	*Nanorobotic Applications*
S-2	SLO-1	*Actuation*	*Electro rotation*	*Fast imaging system*	*Automated manipulation of micro-nano objects*	*Endoscopy imaging*
	SLO-2	*Electro kinetic based actuation*	*Theory and modelling of electro rotation*	*Compressive sensing based fast imaging system*	*Automated manipulation of nanostructures*	*Wireless capsules endoscopy imaging*
S-3	SLO-1	*Carbon nanotubes*	*Properties of fluid medium*	*SPMbasics*	*Automated manipulation of Nanorods*	*Energy harvesting*
	SLO-2	*Electro kinetic manipulation of carbon nanotubes*	*Dynamic effects of fluid medium*	*AFM based imaging*	*Automated manipulation of Nanowires*	*Energy harvesting by nanorobotic*
S-4	SLO-1	*Graphene sheets*	*Dielectrophoretic*	*Atomic manipulation in AFM*	*Automated manipulation of nanotubes*	*Gastro-intestinal tract- introduction*
	SLO-2	*Nanoparticles*	*Nanoparticles by dielectrophoretic*	*AFM based nanorobotic system*	*Automated manipulation of nanoparticles*	*Capsules robot in gastro-intestinal tract*
S-5	SLO-1	*Biological entities*	*CNT-definition*	*Augmented reality*	*Augmented reality system*	*Nanorobots - introduction*
	SLO-2	*Biological nanomaterials*	*Manipulation of CNT*	*AFM based nanorobotic system enhanced by augmented reality*	*Limitation of augmented reality system*	*Nanorobots –basic design*
S-6	SLO-1	*Laser based actuation-fundamentals*	*Scanning probes*	*Hardware setup for Sensing*	*Real time fault detection*	*Cooperative control design for nanorobots*
	SLO-2	*Laser based actuation-applications*	*Nanomanipulation by scanning probe*	*Software setup for Sensing*	*Methods of real time fault correction*	*Design and application of nanorobotics in oncology*

S-7	SLO-1	*Optical tweezers*	*Atomic scale stick-definition*	*Hardwaresetup for fast imaging system*	*Time random drift*	*Drug delivery system*
	SLO-2	*Applications of optical tweezers*	*Reducing atomic scale stick*	*Softwaresetup for fast imaging system*	*Time random drift compensation with local scan*	*Cooperative control design for nanorobots in drug delivery*
S-8	SLO-1	*Manipulation of biological entities*	*Slip motion*	*Experiments on nanomanipulation of nanoparticles-I*	*on-line fault detection*	*Medical applications of nanorobots*
	SLO-2	*Manipulation of chemical entities*	*Nanomanipulation by slip motion*	*Experiments on nanomanipulation of nanoparticles-II*	*Interpretation of on-line fault correction*	*Medical applications of nanorobots: current proposals and designs*
S-9	SLO-1	*Piezoelectricity*	*Feedback control*	*Experiments on nanomanipulation of nanoparticles-III*	*Implementation of the data to test the hypothesis*	*Therapy using nanorobots*
	SLO-2	*Piezoelectric enabled actuators*	*Slip motion by feedback control nanomanipulation*	*Experiments on nanomanipulation of nanoparticles-IV*	*Experimental results of the data to test the hypothesis*	*Cancer targeted therapy using nanorobots*

							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Acquire knowledge on various physical principles related to liquid flow*
CLR-2 :	*Understand theory of fluid flow in micro and nano-size devices.*
CLR-3 :	*Describe the concept of heat and mass transfer phenomena in channel*
CLR-4 :	*Unifies thermal sciences with colloidal sciences, biological sciences*
CLR-5 :	*Gain knowledge on electrochemistry*
CLR-6 :	*Understand the applications of micro and nanofluidics*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1	2	3	Program Learning Outcomes (PLO) 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Apply the principles of liquid flow*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Analyze flow of fluid in micro and nano-size devices*	2	80	70	H	M	M	H	M	M	M	M	M	H	M	H	M	M	M
CLO-3 :	*Apply the knowledge of micro and nanofluidic devices, their fabrication, charecterization*	2	75	70	H	M	H	M	M	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Utilize the opportunities in the emerging field of micro and nanofluids*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Apply the concept electrochemistry*	2	80	70	H	M	H	H	M	M	H	H	M	H	M	H	H	H	H
CLO-6 :	*Utilize the new concepts of real-time nanomanipulation & assembly*	2	80	75	H	M	M	M	H	M	M	M	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Microscale liquid flow - Introduction*	*Microscale viscous flow - Essentials*	*Heat transfer phenomena in channels and tubes*	*Elements of electrochemistry and the electrical double layer - introduction*	*Elements of cell biology and applications*
	SLO-2	*Micro and Nanofluidics*	*Structure of flow in a pipe or channel*	*Mass transfer phenomena in channels and tubes*	*The structure of water and ionic species*	*Nucleic acids and polysaccharides*
S-2	SLO-1	*Micro and Nanofluidics devices*	*Poiseuille flow in a pipe*	*One-dimensional temperature distributions in channel flow*	*Chemical bonds in biology and chemistry*	*Proteins : Protein function*
	SLO-2	*Design of micro and Nanofluidics devices*	*Poiseuille flow in a pipe – derivation of maximum velocity*	*Temperature distributions in channel flow (Quantitative approach)*	*Hydration of ions*	*Protein structure*
S-3	SLO-1	*Preparatory concepts*	*The velocity in slip flow - gases*	*Thermal and mass transfer entrance regions*	*Chemical potential*	*Some common proteins*
	SLO-2	*Constitutive Laws*	*The velocity in slip flow - Liquids*	*Mass transfer entrance regions*	*Chemical potential (Quantitative approach)*	*Few polypeptide chains are useful*
S-4	SLO-1	*Determination of transport properties – viscosity, diffusion coefficients*	*Flow in a thin film under gravity*	*The temperature distribution in fully developed tube flow*	*The Gibbs function*	*Protein binding*
	SLO-2	*Determination of transport properties – thermal conductivity*	*Flow in a thin film under gravity – film flow rate*	*Nusselt number*	*Chemical equilibrium*	*Cells - The cell membrane*
S-5	SLO-1	*Classification of fliud flows*	*Fully developed suction flows*	*The Graetz problem for a channel*	*Electrochemical potential*	*Membrane transport*
	SLO-2	*Continuum approximation and its limitations*	*Velocity profile – suction flow*	*The Graetz problem for a channel (Quantitative approach)*	*Acids, bases, and electrolytes*	*Ion channels*
S-6	SLO-1	*Kinematics - Surface forces*	*Developing suction flows*	*Mass transfer in thin films*	*Site-binding models of the silica surface*	*Applications - DNA transport*

	SLO-2	*Body forces*	*Darcy's law*	*A thin liquid film falling under gravity*	*Polymer surfaces*	*DNA current*
S-7	SLO-1	*Navier-Stokes equation*	*Surface tension driven flow*	*Classical Taylor–Aris dispersion*	*Qualitative description of the electrical double layer -*	*Development of an artificial kidney : Background*
	SLO-2	*Navier–Stokes equations in Cartesian coordinates*	*Surface tension driven flow (Quantitative approach)*	*Classical Taylor–Aris dispersion (Quantitative approach)*	*Qualitative description of the electrical double layer - triple layer model*	*The nanopore membrane for filtration, Hindered transport*
S-8	SLO-1	*Energy transport*	*Stokes flow past a sphere*	*The stochastic nature of diffusion*	*The electrical double layer on a cylinder*	*Biochemical sensing : Biosensor, Receptor -based classification of biosensors*
	SLO-2	*Energy transport - conduction heat transfer*	*Stokes flow past a sphere – drag calculation*	*Brownian motion*	*The electrical double layer on a sphere*	*Transducer-based classification of biosensors*
S-9	SLO-1	*Two-dimensional, Steady flow*	*Sedimentation of a solid particle*	*Unsteady mass transport in uncharged membranes*	*Electrical conductivity in an electrolyte solution.*	*Evaluation of biosensor performance*
	SLO-2	*Incompressible flow*	*Simple model for blood flow*	*Temperature and concentration boundary layers*	*Electrophoretic effect*	*Nanopores and nanopore membranes for biochemical sensing.*

Course Code	18NTE403T	Course Name	NANOTECHNOLOGY FOR ENERGY SYSTEMS	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	NanotechnologTtty	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	Learn the importance of renewable energies for the safe survival of human kind on the earth
CLR-2 :	Understand the basics of green energy production, storage and transport
CLR-3 :	Understand how nanotechnology can improve the green energy production from various sources
CLR-4 :	Explore the methods of hydrogen production and storage
CLR-5 :	Acquire knowledge on the fabrication, characterization of nanomaterials useful for energy production, transportation and storage
CLR-6 :	Acquire knowledge on design, fabrication, characterization of advanced energy systems

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	Identify the urgency of energy solutions and the expectations of Nanotechnology in providing long term solutions to these problems	2	80	75	H	M	H	H	H	H	M	H	H	H	M	H	H	H	H
CLO-2 :	Describe the concepts of heterogeneous catalysis, and further apply in the designing of various nanocatalysts for energy applications	2	80	70	H	M	M	H	M	M	H	H	M	M	H	H	M	M	M
CLO-3 :	Apply Nanotechnology and nanomaterials in the designing of solar energy conversion systems and fuel cell technologies	2	75	70	H	M	H	H	H	H	H	M	H	M	H	H	H	H	H
CLO-4 :	Apply the Nanotechnology and nanomaterials for energy storage technologies	2	80	75	M	H	H	M	H	H	H	H	H	M	M	H	H	H	H
CLO-5 :	Apply the thermoelectric principles and nanotechnology to design high figure-of-merit thermoelectric devices	2	80	70	H	H	H	H	H	M	M	M	M	H	H	H	H	H	H
CLO-6 :	Apply Nanotechnology in the sensing and remediation of pollutants in air and water	2	80	75	H	H	M	H	H	M	M	M	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	Energy Challenge in the 21st Century	Terawatt challenges in photovoltaics	Bulk thermoelectric materials	Low temperature fuel cells	Introduction to contribution of nanotechnology to hydrogen production
	SLO-2	Fuel share of world total primary energy supply	How can photovoltaics meet a significant fraction of energy demand?	Basics of thermoelectricity, Seebeck effect, Peltier effect, Figure of merit, Wiedemann-Franz relationship	Impact on nanostructured materials, development of low-temperature fuel cells	Methods of hydrogen production, Importance of hydrogen energy
S-2	SLO-1	Nanotechnology in energy research	Limits in conversion efficiency	Bulk thermoelectric materials- size effects, Selection criteria for bulk thermoelectric materials	Cathode and anode reaction	Nanomaterial based photoelectron chemical cell
	SLO-2	The importance of nanotechnology in improving the nanoscale energy devices	Theoretical limits of photovoltaics efficiency and possible improvements by different approaches	Important three guidelines	Oxygen reduction reaction, cathodic reactions, reactions at anode surface	Nanocrystalline thin films of metal oxides in PEC solar cells, Water splitting for producing hydrogen
S-3	SLO-1	Conventional fossil fuels Unconventional fossil fuels	Hybrid concepts	Effect of size of the quantum dots, nanowires on the conversion efficiency, classical and quantum size effects	Practical fuel cell catalysts and Electrolytes	Semiconductors with specific morphology such as nanotubes and discs for production of hydrogen
	SLO-2	Discussion about greenhouse gases, Clean energy sources and advantages	Combining organic and inorganic cells, concept of heterojunction-type photoactive layer, hole-electron pair	Thermoelectric properties on nanoscale: modeling	Nanostructured materials in low-temperature cell, Non-precious catalysts, electrolytes	Sensitization, Hydrogen storage: technological barriers
S-4	SLO-1	Nanotechnology in fuel production	Semiconductors optical properties	Understanding thermoelectric properties on the nanoscale using modeling	High-temperature polymer electrolyte membranes, membrane-electrode assembly	Methods of improving efficiency of cells, HOMO-LUMO gap, several examples of sensitization
	SLO-2	Making efficient and economical engines	Basics of semiconductors, bandgap	Importance of characteristic length scale, Bi nanostructures	High temperature fuel cells	Hydrogen storage technology –potential storage materials hydrogen sorption

S-5	SLO-1	Renewable energy sources-Photovoltaics	charge carrier transport in semiconductors	Importance of Bi nanowire and its diameter in thermoelectricity	Development of cells that operate up to 700ºC	Hydrogen storage by Physiosorption and chemisorption methods
	SLO-2	Emission spectra and color as a function of particle size of a quantum dot	Optical properties of semiconducting thin films, Optical absorption	Silicon nanowire and importance at nanoscale	High temperature ceramic electro catalysts	Properties of materials: physical storage, thermodynamic and kinetics
S-6	SLO-1	Example of nc-CdTe film on ITO-coated glass solar cell	Narrow and wide band gap materials, importance of optical absorption	How surface roughness effects thermal conductivity. Phonon effects on the Seebeck coefficient and thermal conductivity	Electrochemical reaction at high temperatures, triple phase boundary	Bond strengths for Physiosorption and chemisorption, The desirable range of bonding energies
	SLO-2	Gratzel Cell Examples of nanostructured films used for PV cells	Selection of Dye sensitizer for better optical absorption, n-CdS band gap	Thermionics nanocomposites	Porous Ni-Ceramic electrolyte (YSZ), LaSrMnOe ceramic electrolyte	Nanostructured carbon
S-7	SLO-1	Hydrogen production	Dye molecular engineering	Description of electron motion across the barrier	Application of high temperature ceramic electro catalysts	MWNT, SWNT, carbon nanorods and aerogels etc.
	SLO-2	Mechanisms of dye sensitization and sensitization by composite semiconductors	HOMO-dye, LUMO gap	Si/SiGe superlattice nanowire, prototype InP/InAs superlattice nanowire	Various examples of high temperature fuel cells where ceramic electro catalysts are used	zeolites- clathrates- polymers
S-8	SLO-1	Hydrogen energy system. Advantages of hydrogen fuel	Stable self-assembling dye. Monomolecular layer	Thermoelectric nanocomposites	Solid oxide fuel cells (SOFCs)	Reversible occlusion of gases. Metal-organic frame works and their storage efficiency
	SLO-2	Fuel cells, REDOX potentials, electrochemical reactions in different types of fuel cells	Structure of the Z-907 amphiphilic Dye	PbTe-PhSeTe quantum dot	Mechanical properties, Efficiency, operating temperatures	Metals and complex hydrides- chemical hydrides nanocomposites
S-9	SLO-1	Microbial fuel cells, polymer electrolyte fuel cells	Electron transfer mechanism from TiO2 to Dye, Dye excitation and relaxation mechanisms	PbTe-PbSe bulk alloys, superlattice systems	Dry hydrocarbons in SOFC	Hydrogen storage by chemisorption, basic structures of metal and complex hydrides, chemical hydrides, Nanocomposites
	SLO-2	Introduction to Thermoelectricity	The nanostructured semiconductors	Application of thermionic and thermoelectric nanocomposites	Applications of Fuel cells	Some examples of storing hydrogen with the above materials

Learning Resources	1. Javier Garcia-Martinez, Nanotechnology for the Energy Challenge, WILEY-VCH Verlag GmbH & Co., 2010 2. 2. Course Code	18NTE404T	Course Name	PHOTOVOLTAIC TECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Learn the basic principles and design of photovoltaic cell technology*
CLR-2 :	*Understand the key properties of semiconductors used in photovoltaic technology*
CLR-3 :	*Learn about basic photovoltaic device structure and design*
CLR-4 :	*Develop an understanding of the primary photovoltaic device technologies and their design*
CLR-5 :	*Gain exposure to the various applications of photovoltaics*
CLR-6 :	*Acquire knowledge on advanced concepts explored in photovoltaics*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Differentiate between different types of photovoltaic technologies*	2	80	75	H	H	H	H	H	H	M	H	H	H	H	H	H	H	H
CLO-2 :	*Interpret important properties of semiconductors relevant to photovoltaics*	2	80	70	H	H	M	H	M	H	M	H	M	H	H	H	M	M	M
CLO-3 :	*Apply different photovoltaic device design concepts for different applications*	2	75	70	H	H	H	H	H	H	H	M	M	H	H	H	H	H	H
CLO-4 :	*Appreciate advancement of different generations of solar cells*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Appreciate the advanced concepts and explorations in photovoltaics*	2	80	70	H	M	H	H	H	M	M	H	M	H	H	H	H	H	H
CLO-6 :	*Perform photovoltaic device testing and calculations*	2	80	75	H	M	M	H	H	M	M	H	M	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Renewable energy technologies*	*Optical absorption*	*Solar Cell parameters*	*Si photovoltaics*	*III-V photovoltaics*
	SLO-2	*Present and future global issues*	*Carrier photogeneration*	*Device testing*	*Fabrication of Si solar cells*	*Multi-junction solar cells*
S-2	SLO-1	*Historical development of PV; drivers-*	*Band gap*	*Efficiency calculations*	*High efficiency single crystal Si solar cells*	*Spectral splitting*
	SLO-2	*Commercialization/economic factors*	*Direct vs. indirect bandgaps*	*(EFF, VOC, JSC) for ideal cells*	*Si PV designs*	*GaInP/GaAs/Ge triple junction solar cell*
S-3	SLO-1	*Basic components of PV systems*	*Minority carrier transport properties-*	*Non-idealities*	*Polycrystalline/microcrystalline Si solar cells*	*Bandgap profile optimization*
	SLO-2	*Mechanism of PV*	*Carrier recombination-lifetime and defects*	*Series resistance, shunt resistance*	*Amorphous Si solar cells*	*Solar spectrum matching*
S-4	SLO-1	*Sun as a source of energy*	*Band to band and Shockley-Read-hall*	*Optical loss mechanisms*	*Heterojunctions - review*	*Tunnel junctions*
	SLO-2	*The solar spectrum*	*High injection effects*	*Implications on device performance*	*p-i-n and n-i-p structures*	*Current matching limitations*
S-5	SLO-1	*Measuring sun light*	*Surface and interface recombination*	*Electrical loss mechanisms*	*Thin film II-VI solar cells*	*Concentrator photovoltaics (CPV)-*
	SLO-2	*Atmospheric effects*	*Implications on device performance*	*Implications on device performance*	*Chalcopyrite photovoltaics*	*Concentrator optics,*
S-6	SLO-1	*Terrestrial and space spectra;*	*PN homojunctions*	*Basics of solar cell device design*	*CdTe/CdS thin film solar cells*	*CPV cells*

	SLO-2	*Air mass (AM0, AM1.5)*	*Carrier transport under broad spectrum illumination*	*Minimization of losses*	*Superstrate structure*	*Terrestrial CPV systems*
S-7	SLO-1	*Classification of photovoltaic technologies*	*Photocurrent*	*Lateral design and Vertical design*	*CuInGaSe2/CdS thin film cell technologies*	*Space photovoltaics*
	SLO-2	*Generations of solar cells*	*Spectral response*	*Cyclotron frequency*	*Earth abundant alternatives*	*Radiation effects in semiconductors and solar cells*
S-8	SLO-1	*1st generation photovoltaics*	*Current transport models*	*Optical versus electrical tradeoffs and optimization*	*Dye-Sensitized solar cells*	*New concepts*
	SLO-2	*Silicon technology*	*Non idealities*	*Band gap and other material properties*	*QDSSCs*	*Quantum dots, wires*
S-9	SLO-1	*2nd generation photovoltaics*	*Real p-n diodes*	*Spectral utilization*	*Organic photovoltaics*	*Intermediate band solar cells*
	SLO-2	*3rd generation photovoltaics*	*Temperature effects*	*Light management*	*Hybrid solar cells*	*Multiple exciton generation*

Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	*The purpose of learning this is to:*
CLR-1 :	*Understand the basis of cosmeceuticals*
CLR-2 :	*Know the classification and various types of cosmetics*
CLR-3 :	*Acquire knowledge about ingredients and effect of inclusion of nanoparticles in cosmetics*
CLR-4 :	*Get acquainted with current trends in the field of nano based cosmetics*
CLR-5 :	*Get acquainted with future aspects of cosmetics*
CLR-6 :	*Get acquainted with future aspects of aesthetic implants*

Learning Outcomes (CLO):	*At the end of this , learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Apply basic concepts of nanotechnology in cosmetics*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Distinguish effects of using nanoparticles over conventional methods in cosmetics*	2	80	70	H	M	H	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Analyze about current trends in the field of cosmetics*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Apply basic cosmetic concepts in making nanoformulation*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Apply knowledge in making organosilicone formulation*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6 :	*Apply knowledge in making aesthetic implants*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Introduction to cosmetics*	*Oily materials: introduction, oils and fats, wax*	*Film formers*	*Multiple emulsions as novel delivery systems*	*Dual nanodelivery systems*
	SLO-2	*Purpose of cosmetics*	*Hydrocarbons*	*Polymers as film formers*	*Nanoemulsion in cosmetics*	*Dual nanodelivery systems-Introduction*
S-2	SLO-1	*Meaning of cosmetics*	*Higher fatty acids*	*Thickeners*	*Nanocrystals in cosmetics*	*Synthesis of dual nanodelivery systems containing vitamin e for cosmetics*
	SLO-2	*Classification of cosmetics*	*Higher alcohols, esters, silicones*	*Types of thickners*	*Silicones and beyond*	*Synthesis of dual nanodelivery systems containing vitamin e for pharmaceuticals*
S-3	SLO-1	*Cosmeceuticals*	*Surface active agents : introduction*	*Polymers in hair colouring*	*Organomodified silicones*	*Characterization of dual nanodelivery systems containing vitamin e*
	SLO-2	*Pharmaceuticals in cosmetics*	*Anionic surfactant*	*Types of polymers in hair colour*	*New esters mimicking property for organomodified silicones*	*Various characterization techniques used*
S-4	SLO-1	*Quality characteristics*	*Cationic surfactants*	*Conditioning polymers*	*Silicones in shampoo*	*Orthopedic implant*
	SLO-2	*Quality assurance*	*Amphoteric surfactant*	*Surfactants in conditioners*	*Minimalizing undesirable side effects*	*Conventional types of Orthopedic implant*
S-5	SLO-1	*Development process of cosmetics*	*Non-ionic surfactant*	*Cleansing agents*	*Substantive silicones*	*Orthopedic implant titanium rods*
	SLO-2	*Cosmetics for Skin*	*Other surfactants*	*Ethoxylated alcohols*	*Effect of substantive silicones*	*Advantages of Orthopedic implant of titanium rods*
S-6	SLO-1	*Cosmetics for hair*	*Humectants : introduction*	*Silicones*	*Organo-modified delivery systems*	*Preparation of keratin coatings for orthopedic implant titanium rods*
	SLO-2	*Cosmetics for nails*	*Choice of humectants*	*Emulsions*	*Types of Organo-modified delivery systems*	*Characterization of keratin coatings*

S-7	SLO-1	*Cosmetics colour materials*	*Unusual humectants*	*Types of polymeric systems*	*Silicones personal care delivery system*	*Nanotherapeutics as a treatment for inflammation*
	SLO-2	*Cosmetics and fragrances*	*Special uses of humectants*	*Natural polymers*	*Liposomes in cosmetics*	*Cosmetic repair and restoration*
S-8	SLO-1	*Oral care cosmetics*	*Antioxidants : introduction*	*Stimuli responsive polymeric systems*	*Niosomes in cosmetics*	*Moisturization of skin*
	SLO-2	*Body cosmetics*	*General oxidative theory, measurement of oxidation*	*pH-responsive*	*Microemulsion in cosmetics*	*Fortification of the skin barrier*
S-9	SLO-1	*Physical chemistry of cosmetics*	*Assessment of oxidant efficiency*	*Thermal responsive*	*Nanoemulsion in cosmetics*	*Contact lenses types*
	SLO-2	*Stability of cosmetics*	*Choice of antioxidant*	*Photo responsive*	*Cyclodextrin complexes in cosmetics*	*Beauty from contact lenses beyond vision correction*

Learning Rationale (CLR):	*The purpose of learning this is to:*
CLR-1 :	*Familiarize with the field of traditional manufacturing to green manufacturing*
CLR-2 :	*Understand the various p techniques for sustainable green manufacturing*
CLR-3 :	*Able to green nanotechnology concepts in Industrial process*
CLR-4 :	*Gain knowledge on industrial policies and operations in industry*
CLR-5 :	*Understand the list of metrics in the industry*
CLR-6 :	*Familiarize the life cycle process of industrial production*

Learning Outcomes (CLO):	*At the end of this , learners will be able to:*	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Apply the concepts of green manufacturing in industry*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Solve the general problems associated with the sustainable green manufacturing*	2	80	70	H	M	M	H	M	M	M	H	M	H	M	H	M	M	M
CLO-3 :	*Utilize and reuse the resources effectively in industrial process*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Follow the policies & metrics in industrial process*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Analyze the life cycle production systems using analyzing machine tools*	2	80	70	H	M	H	H	H	M	M	H	M	H	M	H	H	H	H
CLO-6 :	*Utilize green manufacturing in semiconductor manufacturing process*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Green manufacturing*	*Social, business & policy environment*	*Metrics for green manufacturing*	*Closed loop production systems*	*Semiconductor manufacturing*
	SLO-2	*Sustainability*	*Need for change*	*Current metrics*	*Life cycle production systems*	*Semiconductor fabrication*
S-2	SLO-1	*Regulation pressure*	*Internal stake holders*	*Financial metrics*	*Economic and ecological benefits*	*Micro fabrication process*
	SLO-2	*Economic incentives*	*External stake holders*	*Metrics for ecology*	*Reduction of investment & increase of resources*	*Lithography*
S-3	SLO-1	*Comprehensive advantages*	*Components of next transition*	*Metrics for society*	*Machine tools*	*Oxidation & annealing*
	SLO-2	*Barriers*	*Linear to circular transition*	*Multiple metrics*	*Energy consumption*	*Cleaning*
S-4	SLO-1	*Environment impact on waste generation*	*Product production to service provision*	*Impact assessment*	*Life cycle assessment machine tools*	*Facility systems – resource use*
	SLO-2	*Toxic chemical releases*	*Integrated, information – Rich Communication*	*Risk assessment*	*Methods & results*	*Abatement*
S-5	SLO-1	*Energy consumption and carbon emission*	*Policy environment – Changing policy trends*	*Material flow analysis*	*Process parameter optimization*	*Green manufacturing in industry*
	SLO-2	*Strategies for green manufacturing*	*Fostering co-operation*	*Energy flow analysis*	*Constant feed per tooth*	*Concepts & challenges*
S-6	SLO-1	*Green supply chain*	*Principles of green manufacturing*	*Metric development methodologies*	*Constant spindle speed*	*Use phase issues*
	SLO-2	*Motivation for green supply chain (GSC)*	*Technology – wedgels*	*Ecological metric choice model*	*Conventional vs high speed machining*	*Analysis phase of semiconductor manufacturing*

S-7	SLO-1	*Definition of GSC*	*1st principle of green manufacturing*	*Decision tree model for equipment's Supply*	*Dry machining and minimum quantity lubrication*	*Upstream materials*
	SLO-2	*Issues in GSC*	*2nd principle of green manufacturing*	*Metrics development for component systems*	*Health & environmental hazards*	*Chemicals, silicon, water*
S-8	SLO-1	*Level of approach*	*3rd principle of green manufacturing*	*Green energy supply*	*Remanufacturing – product recovery & industrial practice*	*Infrastructure & equipment*
	SLO-2	*General problems in GSC*	*4th principle of green manufacturing*	*Green energy technologies*	*Challenges & opportunities*	*Electricity*
S-9	SLO-1	*Techniques of GSC*	*Mapping of principles*	*Solar photovoltaics, wind energy*	*Reuse*	*Semiconductor manufacturing*
	SLO-2	*Future of GSC*	*Solutions*	*Application potentials of green energy*	*Approaches for sustainable factory design*	*Transportation & use phase*

CLT-6:	Demonstration of the ability to design new functional materials	2	80	70															

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*History of computing – Nanocomputing*	*Molecular Computing*	*Introduction to Biochemical Computing*	*Bit and Qubit*	*Parallel computing*
	SLO-2	*Nanocomputing Technologies – Alternative to Transistor Technology*	*Applications of Molecular Computing*	*Examples of Biochemical Computing*	*Coherence and Entanglement*	*Shared and Distributed Memory Clusters*
S-2	SLO-1	*Quantum Computing*	*Modeling molecules*	*Application of DFT in biological system*	*Concept Coherence*	*Parallel algorithm*
	SLO-2	*Quantum Computing: Applications*	*Modeling clusters of atoms*	*Application of MD in biological system*	*Concept of Entanglement with Examples*	*MPI based algorithm as example*
S-3	SLO-1	*Nano Information Processing*	*Overview of various first-principles methods*	*Genetic Algorithm*	*Theory Quantum Parallelisms*	*Working Concept of Mono and Multiprocessor Systems*
	SLO-2	*Prospects and Challenges*	*Discussion on Limitation and Application*	*Application of GA to Biological Systems*	*Application of Quantum Parallelisms*	*Applications: Mono and Multiprocessor Systems*
S-4	SLO-1	*Digital Signals*	*Density Functional Theory (DFT)-*	*Biological Neurons*	*Classical Gates – Reversible Operations*	*Some considerations to Parallel Processing*
	SLO-2	*Digital Gates*	*Density Functional Theory (DFT)- HK and KS equations*	*Biological Neurons in information processing*	*Sqrt (NOT) Operation*	*Usefulness of Parallel processing in various device applications*
S-5	SLO-1	*Concept Silicon Nanoelectronics*	*Structural, Electronic of nanomaterials from DFT calculations (Examples only)*	*Function of neuron cell on silicon*	*Concept of Quantum Algorithm*	*Influence of Delay Time*
	SLO-2	*Application of Silicon Nanoelectronics*	*Magnetic properties (examples only)*	*Function of neuron cell on silicon for Signal processing*	*Application Quantum Algorithms*	*Performance efficiency on Delay time*
S-6	SLO-1	*Introduction to Carbon Nanotube Electronics*	*Concept of Optical Computing*	*Modeling of neuron cells by VLSI circuits*	*Challenges to large Quantum Computers*	*Power Dissipation*

	SLO-2	*Application of CNT electronics*	*Application of Optical Computing*	*Problems on Modeling of neuron cells by VLSI circuits*	*Fabrication, Testing Architectural Challenges*	*Power Dissipation in different system*
S-7	SLO-1	*Concept of Silicon Nanoelectronics*	*Current use of optics for Computing in Industry*	*Neural networks and distributed data processing*	*Working Concept of Quantum dot cellular automata*	*Architecture for Processing in Nanosystems*
	SLO-2	*Application of Silicon Nanoelectronics*	*Optics for Computing: Future Applications*	*Problems on Neural networks and distributed data processing*	*Application with Example of Quantum dot cellular automata*	*Classic Systolic Arrays*
S-8	SLO-1	*Concept of Carbon Nanotube Electronics*	*Optical Computing Paradigms*	*Working concept of DNA Computer*	*Introduction and Working principle of Computing with QCA*	*Processor with large memory*
	SLO-2	*Application of Carbon Nanotube Electronics*	*Optical Computing Paradigms: Examples*	*Application of a DNA Computer*	*Application of Computing with QCA*	*Application of Processor with large memory*
S-9	SLO-1	*Modeling of Carbon Nanotube*	*Working concept of Photonic Switches.*	*Information Processing with Chemical reactions: Working Concept*	*QCA Clocking.*	*Processor array with SIMD*
	SLO-2	*Field Effect Transistors based on CNT*	*Application of Photonic Switches.*	*Information Processing with Chemical reactions: Example*	*QCA Design Rules.*	*PIP Architectures.*

Course Code	18NTE408T	Course Name	NANOTECHNOLOGY IN TEXTILES	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Acquire knowledge on nanotechnology for textile applications*
CLR-2 :	*Learn the smart materials and devices for textile industry*
CLR-3 :	*Study the various nanostructures for improving the textile yarn and fabric*
CLR-4 :	*Understand the nanomaterials processing for textile industry*
CLR-5 :	*Learn various nanodevices for improving the textile fabrics*
CLR-6 :	*Get familiarize with the integration of nanodevices in textiles*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Utilize the scientific concepts of nanotechnology in textile applications*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Apply the nanoparticles & nanofibers in textile fabric designs*	2	80	70	H	M	M	H	M	H	M	H	M	H	M	M	M	M	M
CLO-3 :	*Familiarize the characteristics and classification of the nanomaterials for nanofabrics*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	M	H	H	H
CLO-4 :	*Apply various nanocoating methodologies for improving textile fabrics*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	M	H	H	H
CLO-5 :	*Familiarize with new concepts of Nanotechnology based product in Textiles*	2	80	70	H	M	H	H	H	H	M	H	M	H	M	H	H	H	H
CLO-6 :	*Apply the various nanostructures and materials in textiles fabrics*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	M	M	H

Duration (hour)		9	9	9	9	
S-1	SLO-1	*Introduction to smart nanotextiles*	*Responsive Polymers*	*Nanocomposites for textiles*	*Nanocoatings for textiles*	*Nanogenerators for textiles*
	SLO-2	*Nanotechnology & nanomaterials*	*Classification of stimuli-responsive polymers*	*Classifications*	*Various methods of nanocoating*	*Working of nanogenartors*
S-2	SLO-1	*Nanofibers*	*Responsive polymers as sensors*	*Structure & properties*	*Sol-gel Processing*	*Classification of nanogenerators*
	SLO-2	*Advantages of nanofibers*	*Responsive polymers in drug delivery systems*	*Production methods of nanocomposites*	*Sol-gel coating methodology*	*Piezoelectric Nanogenerators (PENG)*
S-3	SLO-1	*Nanofibers fabrication*	*Responsive polymers in cell application*	*Carbon structures*	*Photocatalytic self-cleaning*	*Triboelectric Nanogenerators (TENG)*
	SLO-2	*Electrospinning*	*Responsive polymers based filters*	*Nanocellulose*	*Super hydrophobic self-cleaning*	*Theoretical origin of Nanogenerators*
S-4	SLO-1	*Enhancing the mechanical properties*	*Nanowires for textiles*	*Conducting polymers*	*Antibacterial coating*	*Fiber based PENGs*
	SLO-2	*Large scale production of fibers*	*Properties of nanowires in textiles*	*Nanoparticles, clays & wires*	*UV-Protection coating*	*Textile based PENGs*
S-5	SLO-1	*Formation of yarn & fabric*	*Balancing transparency and conductance*	*Laminated nanocomposites and fibers*	*Impregnation*	*TENGs Classifications*
	SLO-2	*Moisture management & waterproof*	*High specific surface area*	*Membranes, coatings, & Hydrogels*	*Cross linking method*	*Fibers based TENGs*
S-6	SLO-1	*Thermoregulation*	*Direct charge transport path*	*Sensing of Nanocomposites*	*Plasma surface activation*	*Textiles based TENGs*
	SLO-2	*Personal protection*	*Oriented assembly of Nanowires*	*Actuators of Nanocomposites*	*Surface modification process*	*1D materials based TENGs*

S-7	SLO-1	*Wearables and sensors*	*Metal conducting Nanowires*	*Antibacterial activity of Nanocomposites*	*Flame retardant coatings*	*2D fabrics for TENGs*
	SLO-2	*Medical care of nanofibers*	*Conducting polymer Nanowires*	*Defense applications of Nanocomposites*	*Carbon materials*	*3D woven textile TENGs*
S-8	SLO-1	*Nanosols as coating agent*	*Oxide semiconducting Nanowires*	*Fire protection*	*Phase change materials in thermal regulation*	*Integrating energy harvesting devices*
	SLO-2	*Applications of nanosols in textiles*	*Sulphide semiconducting Nanowires*	*Fire retardant materials*	*Nanowires in thermal regulation*	*TENGs with solar cells*
S-9	SLO-1	*Photocatalytic and light responsivity of nanosols*	*Other semiconducting Nanowires*	*Self-cleaning*	*Carbon based conducting coating*	*Integrating energy storage devices*
	SLO-2	*Antimicrobials and bioactive systems*	*Current and future perspective of Nanowires*	*Energy harvesting of Nanocomposites*	*Metal based conducting coating*	*Future prospects of Nanogenerators*

Learning Resources	1. *Nazire D. Yilmaz, Smart Textiles, Wearable Nanotechnology, Ist Ed., Scrivener Publishing, 2019* 2. *P. J. Brown and K. Stevens, Nanofibers and nanotechnology in textiles, CRC Press, 2007*	3. *Nanotechnology in Textiles: Theory and Application, Jiří Militký and Rajesh Mishra, Elsevier Publications, 2018*

Pre-requisite Couses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Understanding the basis of cancer biology*
CLR-2 :	*Know the various types of cancer biomarkers*
CLR-3 :	*Getting knowledge about ways to treat cancer growth*
CLR-4 :	*Get acquainted with nanomaterial based current therapies available for cancer treatment.*
CLR-5 :	*Get acquainted with the current trend in cancer theranostics*
CLR-6:	*Know about the market requirements for nanomaterial based therapies*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Analyze the nature of cancer*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Analyze the concepts of cancer nanotechnology*	2	80	70	H	M	H	H	M	M	M	H	H	H	M	H	M	M	M
CLO-3 :	*Apply concepts of cancer nanotechnology to a focused clinical area of their choice*	2	75	70	H	M	H	H	H	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Apply these nanosystems for the diagnosis and therapy*	2	80	75	M	H	H	M	H	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Apply the concepts of nano theronostic strategy*	2	80	70	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-6 :	*Apply concept of gene silencing for cancer therapy*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*The biology and genetics of cells and organisms*	*Cell immortalization*	*Theranostic cancer biomarkers*	*Magnetic nanoparticles as contrast agents for MRI application*	*Pancreatic cancer stem cells as new targets for diagnostics*
	SLO-2	*The nature of cancer*	*Tumorigenesis*	*Targetted cancer theranostics*	*Magnetic nanoparticles as contrast agents for therapeutic application*	*Pancreatic cancer stem cells as new targets for therapy*
S-2	SLO-1	*Tumor viruses*	*Cancer development*	*Molecular imaging in cancer theranostics*	*Ultrasound-responsive nanoparticles as drug delivery carriers*	*Nanomedicine approaches for cancer stem cell targeting*
	SLO-2	*DNA oncoviruses*	*The biology of angiogenesis*	*Imaging-guided cancer therapy*	*Ultrasound-responsive nanoparticles as gene delivery carriers*	*Personalized cancer treatment*
S-3	SLO-1	*RNA oncoviruses*	*Invasion*	*Theranostic platforms*	*Noble metal nanoparticle platform*	*Methods adopted for Personalized cancer treatment*
	SLO-2	*Non-human oncoviruses*	*Metastasis*	*Nanomaterials for theranostics of gastric cancer*	*Cancer theranostics with Gold nanoparticle*	*Lipid based nanosystem for theranostictics*
S-4	SLO-1	*Cellular oncogenes*	*Types of cancers*	*Photo triggered drug delivery strategies For cancer theranostics*	*Cancer theranostics with Silver nanoparticle*	*Lipid based nanosystem for delivery of siRNA*
	SLO-2	*Growth Factors*	*Liver cancer*	*Proteomics-based theranostics*	*Metal oxide for cancer theranostics*	*Gene therapy for cancer*
S-5	SLO-1	*Growth Factor receptors*	*Lung cancer*	*Radionuclide imaging of cancer therapy*	*Cancer theranostics with carbon-based nanoplatforms*	*Gene silencing by DNAzymes*
	SLO-2	*Cytoplasmic signal circuitry program*	*Skin cancer*	*Nanotargetted radionuclide imaging*	*CNT and grapheme based theranostics*	*Gene silencing ribozymes*
S-6	SLO-1	*Traits of Cancer*	*Colon cancer*	*Bioluminescence imaging of cancer therapy*	*Cancer theranostics with silica nanoparticle platform*	*Gene silencing by antisense DNA*
	SLO-2	*Tumor Suppressor genes*	*Stem cells and cancer*	*Imaging in luciferase labeled cancer cells*	*Silica tethered particles for cancer theranostics*	*Gene silencing by microRNA*

S-7	SLO-1	*Types of Tumour Suppressor genes*	*Molecular genetics of cancer*	*Magnetic resonance imaging of cancer therapy*	*Polymer- -based nanotechnologies for cancer theranostics*	*Rationale for immunotherapy*
	SLO-2	*Characteristics of pRb*	*Chemical modifications of chromatin-associated proteins*	*CT based imaging of cancer therapy*	*Protein-based nanotechnologies for cancer theranostics*	*Adoptive immunotherapy*
S-8	SLO-1	*pRb gene-Control of cell cycle clock*	*Genetic alterations in cancer cells: mutations*	*Boron capture therapy and imaging*	*Production of theranostic nanoparticles*	*Antibody based therapy*
	SLO-2	*Characteristics of p53*	*Three types of mutation*	*Ultrasound imaging of cancer therapy*	*Scale-up of theranostic nanoparticles*	*Galectins as targets for novel and specific antibody therapies in gynecologic cancer therapies*
S-9	SLO-1	*Mutation of p53 and apoptosis*	*Chromosomal abnormalities*	*Gene expression microarrays*	*Market considerations*	*Glycans and mucins as targets for novel and specific antibody therapies in gynecologic cancer therapies*
	SLO-2	*Role of p53 in cell cycle progression*	*Acquired abnormalities*	*Tissue arrays*	*Nanotechnology and nanomedicine patenting systems*	*Commercial development of antibodies as drugs*

Course Code	18NTE410T	Course Name	VACUUM AND THIN FILM TECHNOLOGY	Course Category	E	Professional Elective	L	T	P	C
							3	0	0	3

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Acquire knowledge on vacuum systems and technology*
CLR-2 :	*Understand the functionalities of various vacuum pumps and gauges*
CLR-3 :	*Gain Knowledge on various physical and chemical vapor deposition techniques*
CLR-4 :	*Understand the various thin film growth mechanisms and theories explaining them*
CLR-5 :	*Gain knowledge on various characterization techniques tools to characterize thin films*
CLR-6 :	*Acquire knowledge on various physical, optical and chemical properties of thin films*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Apply the functionalities of vacuum systems and can operate them*	2	80	75	H	M	H	H	H	M	M	H	H	H	H	H	H	H	H
CLO-2 :	*Utilize the knowledge acquired to operate vacuum pumps and create vacuum and measure at various regimes*	2	80	70	H	H	H	H	H	H	M	H	H	H	M	H	M	M	M
CLO-3 :	*Grow thin films using various physical and chemical vapor deposition techniques*	2	80	70	H	M	H	H	H	H	H	M	H	H	H	H	H	H	H
CLO-4 :	*Construe the physics and chemistry of growth mechanisms and measure the thickness using various techniques*	2	80	75	H	M	H	H	H	H	H	H	H	H	H	H	H	H	H
CLO-5 :	*Apply the concept of various characterization tools and operate them*	2	80	70	H	H	H	H	H	M	M	H	H	H	H	H	H	H	H
CLO-6 :	*Elucidate various properties of thin films and measure them using different tools*	2	80	75	H	M	H	H	H	M	M	H	H	H	H	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Over view of vacuum systems and technology*	*Over view of Physical vapor deposition techniques*	*Introduction to chemical deposition*	*Basic physics and chemistry behind thin films layer formation*	*Thin films characteristics*
	SLO-2	*Units and different regions of vacuum*	*Thermal evaporation, Resistive heating and RF-heating*	*Electrodeposition*	*Nucleation and early stages of film growth*	*Topography*
S-2	SLO-1	*Kinetic theory of gases*	*Flash evaporation*	*Electrolytic deposition*	*Thermodynamic aspects of nucleation*	*Structure integrity- X-ray diffraction (XRD)*
	SLO-2	*Gas flow and Mean free path*	*Laser evaporation*	*Electro less deposition*	*Thin film growth modes*	*Scanning electron microscopy*
S-3	SLO-1	*Conductance*	*Co-evaporation*	*Anodic oxidation*	*Capillary theory*	*Transmission electron microscopy*
	SLO-2	*Different types of pumps*	*Electron bombardment heating*	*Spray pyrolysis*	*Volmert-Weber growth*	*Energy dispersive analysis of thin films*
S-4	SLO-1	*Mechanical pumps*	*Sputtering plasma, discharges and arc*	*Dip coating and Spin coating*	*Frank-van der Merwe (FM) growth*	*Auger electron spectroscopy*
	SLO-2	*Diffusion and turbo molecular pump*	*Sputtering variants, yield and low pressure sputtering*	*Chemical vapor deposition (CVD)*	*Stranski-Krastanov growth*	*X-ray photoelectron spectroscopy*
S-5	SLO-1	*Ion pumps*	*RF-sputtering*	*Homogenous and heterogeneous process*	*Thickness dependent properties of thin films*	*Rutherford backscattering spectroscopy*
	SLO-2	*Measurement of vacuum*	*Reactive sputtering*	*CVD reactions*	*Thickness measurements*	*Secondary ion mass spectrometry*
S-6	SLO-1	*Direct and indirect gauges*	*Magnetron sputtering*	*Hydrogen reduction*	*Roughness*	*Resistance – 2-point probe*

	SLO-2	*Pirani gauge*	*Magnetron configurations*	*Halide disproportionation, transfer reactions*	*Electrical methods*	*Resistance – 4-point probe*
S-7	SLO-1	*Capacitance gauge*	*Bias sputtering*	*CVD processes and systems*	*Microbalance monitors*	*Optical properties*
	SLO-2	*Penning gauge*	*Evaporation versus sputtering*	*Low pressure CVD*	*Quartz crystal monitor*	*Characterization of layered structures*
S-8	SLO-1	*Vacuum system*	*Pulsed laser deposition (PLD) design and basics*	*Laser enhanced CVD*	*Mechanical method (stylus)*	*Atomic force microscopy (AFM)*
	SLO-2	*Components and operation of vacuum system*	*PLD operating procedure and its various application*	*Metalorganic CVD (MOCVD)*	*Optical interference methods*	*X-Ray Reflectivity (XRR)*
S-9	SLO-1	*Safety practices in vacuum systems*	*Molecular beam epitaxy (MBE) basics*	*Plasma Assisted Chemical Vapor Deposition (PACVD)*	*Ellipsometry*	*Reflection high energy electron diffraction (RHEED)*
	SLO-2	*Applications of vacuum technology*	*MBE operating procedure*	*Safety considerations*	*Interference fringes*	*In-situ RHEED*

CLR-6 :	Explain the structural, electronic and magnetic properties of a given material	2	80	70															

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Classical mechanics, Hamiltonians*	*Born-Oppenheimer approximation*	*Integrating F=ma*	*Introduction - key concepts*	*Introduction to various DFT codes*
	SLO-2	*Coordinate systems in the context of solving the physical problems*	*Limitations of BO approximation*	*Detail time steps*	*Starting structure - energy cutoff*	*Basic DFT outputs*
S-2	SLO-1	*Potential energy-Definition and Concept*	*Introduction to DFT*	*The basic MD algorithm*	*State space sampling*	*Basic output of QM code*
	SLO-2	*Basic pair potentials and their limitations*	*Hohenberg-Kohn Theorems*	*The MD steps*	*Classical momentum*	*Energies, electronic structure*
S-3	SLO-1	*Definition - Elastic constant*	*Kohn-Sham Equation*	*Taylor expansion,*	*Metropolis algorithm*	*Using the energies: molecular statics, MD, MC*
	SLO-2	*Calculation of elastic constants from potential function*	*Interpretation of KS equations*	*Verlet algorithms - choosing the time step*	*Examples with a problem*	*Using the energies: MC*
S-4	SLO-1	*Potentials for ionic systems*	*Exchange-correlation functions and LDA/GGA*	*Predictor-corrector algorithm*	*Monte Carlo simulation analysis*	*Using the electronic structure: optical properties*
	SLO-2	*Potentials for ceramics Systems*	*Accuracy of LDA/GGA*	*Discussion with Examples*	*Limitations of Monte Carlo simulations*	*Transitions between electronic states*
S-5	SLO-1	*Concept of Many-body potential*	*Pseudopotentials*	*MD in different ensembles*	*Introducing ensemble sin MC*	*Electrical conductivity*
	SLO-2	*Many -body potentials for metals*	*Types of Pseudopotentials*	*MD in constant temperature*	*Kinetic Monte Carlo*	*Mobility of electrons, scattering of electrons between states*
S-6	SLO-1	*Many-body potentials for covalently bonded systems*	*Brillouin zone*	*Molecular dynamics in constant pressure*	*Key concepts: starting structure in MD*	*Excited electron states due to thermal (or optical) excitations*
	SLO-2	*Comparative Study*	*K-points, Monkhorst-Pack mesh, Gama point*	*Examples of MD in constant temperature and pressure*	*Key concepts: starting structure in KMC*	*Type of bonding - tunneling rates*

S-7	SLO-1	*Energy optimization*	*Concept of Basis Set*	*Energies: molecular statics*	*Convergence criteria*	*Excited electron states due optical excitations*
	SLO-2	*Significance of Lowest energy structure*	*The need for self-consistency*	*Problems on Molecular Statistics*	*Scaling with lattice parameters*	*Example with a Material problem*
S-8	SLO-1	*Molecular statistics*	*Setting up structures, key parameters, Volume optimization Metals vs. insulators*	*MD Simulation analysis*	*Understanding the electronic structure*	*Understanding the electronic structure from different Methods, Comparative study*
	SLO-2	*Problems on Molecular Statistics*	*Basis sets, energy cutoff, exchange-correlation function, K-points*	*Limitations of MD*	*Electrical conductivity, Excited electron states*	*Wave functions, charge density, band structure, density of states*
S-9	SLO-1	*Thermo statistics*	*Convergence and scaling with lattice parameters,*	*Application of MD as Case Study: 3D system*	*Application of MC method as Case Study: Temperature effect*	*Confinement effect on Electronic Structure*
	SLO-2	*Problems on Thermo statistics problems*	*DOS and BAND Structure*	*Application of MD as Case Study: 2D system*	*Determination of Tc*	*3D, 2D, 1D Carbon based materials as example*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Provide an insight into the fundamentals of ethical implications of nanotechnology*
CLR-2 :	*Provide an insight into the fundamentals of social-economic implications of nanotechnology*
CLR-3 :	*Understand the implications of nanotechnology in quality of life*
CLR-4 :	*Understand the legal risks related with the nanotechnology*
CLR-5 :	*Explore the matters related to patents associated with nanotechnology*
CLR-6 :	*Understand the problems of governance of nanotechnology*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Apply the knowledge of ethical implications pertaining to nanotechnology*	2	80	75	H	H	H	H	H	H	H	H	H	H	M	H	H	H	H
CLO-2 :	*Address the socioeconomic implications of nanotechnology*	2	80	70	H	H	M	H	H	H	H	M	M	H	M	H	M	M	M
CLO-3 :	*Improve the quality of life*	2	75	70	M	M	H	H	H	H	H	M	M	H	M	H	H	H	H
CLO-4 :	*Address the legal risks related with the nanotechnology*	2	80	75	H	H	M	H	M	H	H	H	H	H	M	H	H	H	H
CLO-5 :	*Handle the issues related to patents associated with nanotechnology*	2	80	70	H	M	H	H	H	M	M	M	M	H	H	H	H	H	H
CLO-6 :	*Address the problems of governance of nanotechnology*	2	80	75	M	M	M	H	M	H	H	M	M	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Economic Impacts and Commercialization of Nanotechnology*	*Ethics, Law and Governance – Introduction*	*Social Scenarios - Introduction*	*Converging Technologies - Introduction*	*Public Perceptions and Education*
	SLO-2	*Introduction to societal implications of nanotechnology*	*Ethics and law*	*Nanoparticle toxicity and risk*	*Integrative Technology*	*Public perceptions-societal implications of nanoscience*
S-2	SLO-1	*Socio-economic impact of nanoscale science : initial results*	*Ethical issues in nanoscience and nanotechnology: reflections and suggestions*	*Navigating nanotechnology through society*	*Nanotechnology's implications for the quality of life*	*An agenda for public interaction research*
	SLO-2	*Socio-economic impact of nanoscale science : nanobank*	*Concerns of Nano scientists and engineers in Ethics and law*	*Public and private goods*	*Social implications*	*Communicating nanotechnological risks*
S-3	SLO-1	*Managing the nanotechnology revolution*	*Ethics and nano: a survey*	*Nanoparticle Toxicity and risk*	*Management of innovation for convergent technologies*	*Risk Assessment*
	SLO-2	*Malcolm Baldrige national quality criteria*	*Recent developments in nanotechnology*	*Nanotechnology, surveillance, and society*	*The "integration/penetration model"*	*Risk Communication*
S-4	SLO-1	*Emergence of Nanoeconomy*	*law in a new frontier*	*Methodological issues*	*Social impacts of nano biotechnology issues*	*Problems in Risk Communication*
	SLO-2	*Key drivers, challenges and opportunities*	*An exploration of patent matters associated with nanotechnology*	*Innovations for social research*	*Nanobiotechnology: The Science Dimension*	*A proposal to advance understanding of nanotechnology's social impacts*
S-5	SLO-1	*Moore's law*	*U.S. Patent Statute*	*Nanotechnology: societal implications: individual perspectives*	*The Integration/Penetration Model: The Interface Range*	*Nanotechnology in the media: a preliminary analysis*
	SLO-2	*Transcending Moore's law with molecular electronics*	*The Ethics of Ethics*	*Nanotechnology: individual perspectives*	*New Forms of Knowledge: Computer Simulations and Modeling*	*Public engagement with nanoscale science and engineering*
S-6	SLO-1	*Molecular electronics – a next paradigm*	*Environmental Impacts of nanomaterials*	*Nanotechnology and social trends;*	*Regulatory structures and society*	*Nanophobia*

	SLO-2	*Transcending Moore's law with nanotechnology*	*Problems of governance of nanotechnology*	*Five nanotech social scenarios*	*Social impacts of nanobiotechnology issues*	*Public Engagement with nanotechnology*
S-7	SLO-1	*Transition from Microelectronics to nanoelectronics*	*Negotiations over quality of life in the nanotechnology initiative. Governance*	*Technological revolutions and the limits of Ethics in an age of commercialization*	*The use of analogies for interdisciplinary research in the convergence of nanotechnology*	*Nanotechnology: moving beyond risk*
	SLO-2	*Semiconductor scaling as a model for nanotechnology commercialization*	*Societal implications of emerging science and technologies: a research agenda for science and technology studies (STS)*	*Implications of Experiential data recorder*	*Interdisciplinary research in the convergence of bio technology*	*Communication streams and nanotechnology: the (Re) interpretation of a new technology nanotechnology*
S-8	SLO-1	*Sustaining the impact of nanotechnology on productivity*	*Institutional impacts of government science initiatives*	*Vision, innovation, and policy*	*Interdisciplinary research in the convergence of information technology*	*Societal implications- individual perspectives*
	SLO-2	*Sustaining the impact of nanotechnology on sustainability, and equity*	*Challenges for government and universities*	*Institutionalizing Multi-Disciplinary Engagement*	*Converging technologies: innovation, legal risks, and society*	*The case of Cold Fusion*
S-9	SLO-1	*Implications of Information*	*Nanotechnology for national security*	*Post-hoc Versus Therapeutic Ethics*	*Converging technologies and their societal implications*	*The case of Recombinant DNA*
	SLO-2	*Non-Nano effects of nanotechnology on the economy*	*Nanotechnology in Defense*	*Nano revolution implications for the artist*	*Short-term implications of convergence for scientific and engineering disciplines*	*Historical comparisons for anticipating public reactions to nanotechnology*

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Understand the general scientific concepts of tissue engineering*
CLR-2 :	*Know the various tissue culture techniques*
CLR-3 :	*Acquire knowledge about the role of nanotechnology in tissue engineering and regenerative medicine*
CLR-4 :	*Get acquainted with the current trend in tissue engineering and regenerative technology*
CLR-5 :	*Understand the tissue responses to biomaterial*
CLR-6 :	*Acquire knowledge on various methods adopted tissue scaffold generation*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Apply basic knowledge of tissue anatomy for tissue mimicking*	*2*	*80*	*75*	*H*	*M*	*H*	*H*	*H*	*M*	*M*	*H*	*H*	*H*	*M*	*H*	*H*	*H*	*H*

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*The Cell*	*First Cultures: culture containers*	*Characteristics of biomaterials*	*Electrospinning*	*Electrospun Nanofibers for Neural Applications*
	SLO-2	*The cell as a functional unit*	*First Cultures: culture media*	*Design of biomaterials*	*Experimental setup and basic principle*	*Nanofiber-Based Integrative Repair of Orthopedic Soft Tissues*
S-2	SLO-1	*Tissue types*	*Serum free culture media*	*Fundamental aspects of tissue responses to biomaterials*	*Effects of parameters on electrospinning*	*Nanotechnologies for Peripheral Nerve Regeneration*
	SLO-2	*Soft and Hard tissue*	*Growth factors*	*Types of tissue responses*	*Solution parameters*	*Nanofibrous Materials for Vascular Tissue Engineering and Regeneration*
S-3	SLO-1	*Extracellular matrix*	*Cell Culture Techniques*	*Repair and regeneration*	*Environmental parameters*	*Engineering Soft Nanostructures for Guided Cell Response*
	SLO-2	*Extracellular matrix components and function*	*Hybridomas*	*Evaluation of biomaterial behavior*	*Biomedical Applications of electrospun nanofibres*	*Nanoparticles-Incorporated Scaffolds for Tissue Engineering Applications*
S-4	SLO-1	*Emergence of tissue*	*Cardiomyocites cultivation*	*Adhesion, migration and survival*	*Nanofibres as 3D scaffold for tissue regeneration*	*Electrospun Pseudo Poly (Amino Acids) for Tissue Engineering Applications*
	SLO-2	*Germ layers and Ground tissue*	*Cryopreservation*	*Properties of biomaterials assessed through in vivo experiments*	*Nanofibre scaffolds for interface regeneration*	*Nano-enabled Platforms for Metastatic Malignant Melanoma*
S-5	SLO-1	*Regeneration*	*Slow programmable freezing*	*Hydrogels*	*Techniques to improve porosity*	*Immune Response to Implanted Nanostructured Materials*
	SLO-2	*Various phase of regeneration*	*Vitrification*	*Types of hydrogels used in tissue engineering*	*Techniques to improve cell infiltration*	*3D Bioprinting – introduction*
S-6	SLO-1	*Concept of tissue construction*	*Persufflation*	*Chitosan as biomaterial for tissue engineering*	*Hybrid fibres for bone regeneration*	*3D Bioprinting-pricipies*

	SLO-2	*Three steps of tissue development*	*Tissue culture: Migration*	*Nanobiomaterials for regeneration*	*Hybrid fibres for ligament regeneration*	*CAD based bioprinting*
S-7	SLO-1	*Stem cells- types*	*Tissue culture: new formation*	*Carbon Nanobiomaterial*	*Hybrid fibres for tendon regeneration*	*CAM based bioprinting*
	SLO-2	*Embryonic stem cell*	*Dedifferentiation*	*Self assembling nanobomaterials*	*Bioactive nanofibres*	*Laser based bioprinting*
S-8	SLO-1	*Mesenchymal stem cell*	*Organ culture: principles*	*Polymeric Nanobiomaterials*	*Types of Bioactive nanofibres*	*Bioprinted scaffolds*
	SLO-2	*Adult stem cells*	*Plasma clot method*	*Types of Polymeric Nanobiomaterials*	*Application of Bioactive nanofibres*	*Challenges and future development of 3D bio printing*
S-9	SLO-1	*Stem cells properties and source*	*Agar gel method*	*Ceramic nanobiomaterials*	*Biomolecules on nanofibers*	*Materials used for bio printing*
	SLO-2	*Responsible use of stem cells*	*Formation of organ from tissue*	*Types of Ceramic nanobiomaterials*	*Methods for immobilizing biomolecules*	*Bioprinting based tissue engineering applications*

Pre-requisite Courses	Nil	Co-requisite Courses	Nil	Progressive Courses	Nil
Course Offering Department	Nanotechnology	Data Book / Codes/Standards	Nil		

Learning Rationale (CLR):	The purpose of learning this is to:
CLR-1 :	*Understand the basic concepts related various type of magnetism and magnetic properties of materials*
CLR-2 :	*Provide in-depth knowledge about low dimensional magnetic materials*
CLR-3 :	*Understand the magnetization behavior of magnetic nanostructures and thin films*
CLR-4 :	*Give an overview of different Experimental Approaches to characterize magnetic nanostructures*
CLR-5 :	*Acquire knowledge about fundamentals in spintronics with glimpse of contemporary topics in this field*
CLR-6 :	*Provide in-depth knowledge of spin polarized current and spin transfer torque*

Learning Outcomes (CLO):	At the end of this , learners will be able to:	Learning 1: Level of Thinking (Bloom)	Learning 2: Expected Proficiency (%)	Learning 3: Expected Attainment (%)	PLO 1: Engineering Knowledge	PLO 2: Problem Analysis	PLO 3: Design & Development	PLO 4: Analysis, Design, Research	PLO 5: Modern Tool Usage	PLO 6: Society & Culture	PLO 7: Environment & Sustainability	PLO 8: Ethics	PLO 9: Individual & Team Work	PLO 10: Communication	PLO 11: Project Mgt. & Finance	PLO 12: Life Long Learning	PLO 13: PSO - 1	PLO 14: PSO - 2	PLO 15: PSO - 3
CLO-1 :	*Realize the importance of "magnetism" in contributing to past and for the advancement of new technology*	2	80	75	H	M	H	H	H	M	M	H	H	H	M	H	H	H	H
CLO-2 :	*Appreciate the significance of in-depth understanding of magnetic properties in low dimension*	2	80	70	H	H	M	H	M	M	H	H	M	H	M	H	M	M	M
CLO-3 :	*Obtain the knowledge about fabrication of magnetic nanostructures and properties of the magnetic nanostructures*	2	75	70	H	H	H	H	H	H	H	M	H	M	H	H	H	H	H
CLO-4 :	*Know various sensitive characterization techniques for magnetic nanostructures.*	2	80	75	M	H	H	M	H	H	H	H	H	M	M	H	H	H	H
CLO-5 :	*Analyze the mechanism of spin transport in magnetic nanostructures and its relevance in advancing the existing magnetic recording technology*	2	80	70	H	H	H	H	H	M	H	H	M	H	M	H	H	H	H
CLO-6 :	*Gain the conceptual knowledge related to nanomagnetism and spintronics for energy efficient devices*	2	80	75	H	M	M	H	H	M	M	H	H	H	M	H	H	M	H

Duration (hour)		9	9	9	9	9
S-1	SLO-1	*Basics of magnetism, Units in magnetism*	*Concept of Magnetic ordering*	*Magnetism in thin films*	*Introduction to various magnetometers*	*Introduction to spin transport*
	SLO-2	*Introduction to ferromagnetism, paramagnetism, diamagnetism*	*Magnetic ordering in low dimensions*	*Magnetism in multilayers*	*Working principle of magnetometers*	*Spin angular momentum*
S-2	SLO-1	*Introduction to Ferrimagnetism and Anti-ferromagnet*	*Physical origin of Magnetic anisotropy*	*Fabrication of nanomagnets using various techniques*	*Vibrating Sample Magnetometer*	*Spin Current*
	SLO-2	*Origin of various type of magnetization behavior*	*Shape anisotropy and Magnetocrystalline anisotropy*	*Top down and bottom up approach*	*Superconducting Quantum Interference Device*	*Spin valve devices*
S-3	SLO-1	*Magnetization curves and hysteresis loops, Saturation magnetization,*	*Dipolar anisotropy, Interface magnetic anisotropy*	*Single domain versus multi domain behavior*	*Magnetic imaging techniques*	*Giant magneto resistance (GMR)*
	SLO-2	*Coercive field, Magnetic susceptibility*	*Competing energy scale determining magnetic anisotropy*	*Chemical synthesis of magnetic nano-particles*	*Magneto-optical Kerr effect*	*Spin dependent scattering*
S-4	SLO-1	*Formation of magnetic domains*	*Mechanisms of magnetization reversal,*	*Self assembly of magnetic nanoparticles*	*Longitudinal, Transverse and Polar Kerr effect*	*Valet-Fert model for GMR*
	SLO-2	*Domain walls, Domain wall width*	*Coherent rotation*	*Magnetic nanowires*	*Faraday effect*	*Magnetic tunnel junction*
S-5	SLO-1	*Various type of domain walls*	*Fanning, curling*	*Physical vapor deposition of magnetic thin films*	*Magnetic force microscopy*	*Tunnel magneto resistance (TMR)*
	SLO-2	*Bloch walls and Neel walls*	*Domain wall movement*	*Physical vapor deposition of multilayers*	*Scanning electron microscopy with polarization analysis*	*Application of GMR and TMR*
S-6	SLO-1	*Quantum mechanical picture of Heisenberg exchange interaction*	*Introduction to Gilbert damping*	*DC and RF Sputter deposition of Magnetic materials*	*Interpretation of magnetic contrast from thin films and nanostructures*	*Spin transfer torque*
	SLO-2	*Role of Heisenberg exchange interaction in magnetism*	*Significance of Gilbert damping in choosing magnetic material for application*	*Magnetic Material deposition using E-beam evaporation technique*	*Magnetic contrast from nanostructures*	*Spin-orbit coupling induced phenomena*

S-7	SLO-1	*Energy scales involved in magnetism*	*In-plane magnetic anisotropy*	*Magnetization reversal in magnetic thin films*	*Spin-polarized scanning tunneling microscope (SP-STM)*	*Spin dynamics*
	SLO-2	*Zeeman energy*	*Magnetic domains in in-plane magnetized materials*	*Domain walls and magnetization reversal nanostructures*	*Interpretation of SP-STM results*	*Advanced spintronics based devices*
S-8	SLO-1	*Magnetic anisotropy energy, exchange energy*	*Perpendicular magnetic anisotropy*	*Magnetic properties of nanostructured soft magnetic materials NiFe*	*Introduction to magnetic recording*	*Domain wall based memory*
	SLO-2	*Discussion on Magnetostatic energy*	*Magnetic domains in out-of-plane magnetized materials*	*Magnetic properties of nanostructured soft magnetic materials CoFeB*	*Magnetic recording principles*	*Magnetic random access memory*
S-9	SLO-1	*Introduction to hard magnetic materials*	*Formation of magnetic vortex*	*Magnetic properties of nanostructured hard magnetic materials FePt*	*Nanomagnetic disks*	*Heat assisted magnetic recording*
	SLO-2	*Introduction to soft magnetic materials*	*Formation of antivortex and Skyrmions*	*Magnetic properties of nanostructured hard magnetic materials CoPt*	*Read and write head*	*Microwave assisted magnetic recording*

Learning Resources	*1. Principles of Nanomagnetism, by Alberto P. Guimaraes, XII, Springer Berlin Heidelberg New York, 2009* *2. Advanced Magnetic Nanostructures, by David Sellmyer, Ralph Skomski, Springer Heidelberg, 2010*	*3. Spin dynamics and damping in ferromagnetic thin films and nanostructures, by Anjan Barman and Jaivardhan Sinha, Springer, Switzerland, 2018*

ACADEMIC CURRICULA

Project Work, Seminar,

Internship in Industry / Higher Technical Institutions

Courses

Regulations 2018

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

(Deemed to be University u/s 3 of UGC Act, 1956)

Kattankulathur, Kancheepuram, Tamil Nadu, India

Course Code	18ASP101L 18ASP104L 18AUP101L 18AUP104L 18BTP101L 18BTP104L 18CHP101L 18CHP104L 18CEP101L 18CEP104L 18CSP101L 18CSP104L 18EEP101L 18EEP104L 18ECP101L 18ECP104L 18MEP101L 18MEP104L 18MHP101L 18MHP104L 18NTP101L 18NTP104L	Course Name	MOOC -1 / MOOC - 2	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
							0	0	2	1

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Improve Student Academic Characteristics and learning goals through forums, discussion groups, and blogs*
CLR-2 :	*Improve Student Personal Characteristics through self-learning habits*
CLR-3 :	*Characterize self-learning environment that includes pedagogy, tools, tasks, duration, feedback and assessments*
CLR-4 :	*Improve lifelong learning habits and Learning process*
CLR-5 :	*Characterize learning engagement methods and activities*
CLR-6 :	*Inculcate self-learning behavior and lifelong learning tendency*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	Program Learning Outcomes (PLO) 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Inculcate student characteristics: prior-knowledge, prior-experience, expertise, academic achievement and matriculation*	3	95	85	H	M	M	H	H	H	-	H	H	H	-	H	-	-	-
CLO-2 :	*Inculcate self-motivation, self-confidence, intrinsic motivation, participation, social economic statute, and task-orientation*	3	95	85	H	M	M	H	H	H	-	H	H	H	-	H	-	-	-
CLO-3 :	*Enhance self-learning through peer learning, learning groups, positive collaboration*	3	95	85	H	M	M	H	H	H	-	H	H	H	-	H	-	-	-
CLO-4 :	*Explore different learning styles and activities, identify self-learning pace, difficulties and remedial measures*	3	95	85	H	M	M	H	H	H	-	H	H	H	-	H	-	-	-
CLO-5 :	*Identify ways of students' engagement, achievement, and attrition*	3	95	85	H	M	M	H	H	H	-	H	H	H	-	H	-	-	-
CLO-6 :	*Identify ethical practices in self-learning and practice both individual and group learning dynamics*	3	95	85	H	M	M	H	H	H	-	H	H	H	-	H	-	-	-

MOOC Course Selection : List of MOOC Courses that are Approved to be learned by the student in the respective semester will be displayed by the Department MOOC Committee. Student can pick any course from that list.

Learning Assessment	
MOOC Certification Obtained (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation by the student would be evaluated by the Department MOOC Committee.

Course Code	18ASP102L 18ASP105L 18AUP102L 18AUP105L 18BTP102L 18BTP105L 18CHP102L 18CHP105L 18CEP102L 18CEP105L 18CSP102L 18CSP105L 18EEP102L 18EEP105L 18ECP102L 18ECP105L 18MEP102L 18MEP105L 18MHP102L 18MHP105L 18NTP102L 18NTP105L	Course Name	INDUSTRIAL TRAINING – 1 / INDUSTRIAL TRAINING – 2	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
							0	0	2	1

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Train oneself in finding the aspects in real-time work environment and prepare them to join the workforce in the future*
CLR-2 :	*Gain Exposure to the actual working conditions including rules, regulations and safety practices*
CLR-3 :	*Enhance and supplement the knowledge and skills of the students*
CLR-4 :	*Develop the students in terms of ability, competence and interpersonal relationship*
CLR-5 :	*Enhance students' knowledge in one particular technology*
CLR-6 :	*Provide learning platform that can enhance their employ ability skills*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	Program Learning Outcomes (PLO) 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Apply knowledge of Mathematics, Science, and Engineering Fundamentals in the real world of work*	*3*	*95*	*85*	*H*	*M*	*M*	*H*	*H*	*H*	*L*	*H*	*H*	*H*	*H*	*H*	-	-	-
CLO-2 :	*Demonstrate competency in relevant engineering fields through problem identification, formulation and solution*	*3*	*95*	*85*	*H*	*M*	*M*	*H*	*H*	*H*	*L*	*H*	*H*	*H*	*H*	*H*	-	-	-
CLO-3 :	*Effectively implement skills in professional communication, technical writing and using multimedia tools*	*3*	*95*	*85*	*H*	*M*	*M*	*H*	*H*	*H*	*L*	*H*	*H*	*H*	*H*	*H*	-	-	-
CLO-4 :	*Develop ability to work as an individual and in a group as an effective team member*	*3*	*95*	*85*	*H*	*M*	*M*	*H*	*H*	*H*	*L*	*H*	*H*	*H*	*H*	*H*	-	-	-
CLO-5 :	*Master the professional and ethical responsibilities of an engineer*	*3*	*95*	*85*	*H*	*M*	*M*	*H*	*H*	*H*	*L*	*H*	*H*	*H*	*H*	*H*	-	-	-
CLO-6 :	*Generate a report based on the experiences and projects carried out in a real-world work environment*	*3*	*95*	*85*	*H*	*M*	*M*	*H*	*H*	*H*	*L*	*H*	*H*	*H*	*H*	*H*	-	-	-

Industrial Training Selection : List of Industries for Industrial Training for students would be finalized by the Department Internship/Industrial Training Committee.

Learning Assessment	
Industrial Training Certification Obtained (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation Evaluation would be done by the Internship/Industrial Training Committee formed by the Department.

Course Code	18ASP103L 18ASP106L 18AUP103L 18AUP106L 18BTP103L 18BTP106L 18CHP103L 18CHP106L 18CEP103L 18CEP106L 18CSP103L 18CSP106L 18EEP103L 18EEP106L 18ECP103L 18ECP106L 18MEP103L 18MEP106L 18MHP103L 18MHP106L 18NTP103L 18NTP106L	Course Name	SEMINAR – 1 / SEMINAR – 2	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
							0	0	2	1

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Utilize fundamental principles, generalizations, or theories and ability to present the same*
CLR-2 :	*Increase self-motivation, personal responsibility, understand one's role of being an informed participant*
CLR-3 :	*Create an environment that helps the student establish healthy relationships and support networks*
CLR-4 :	*State and explain some specific skills, competencies, and points of view*
CLR-5 :	*Identify, apply appropriate note-taking, test-taking, and time-management strategies to the academic studies*
CLR-6 :	*Develop critical thinking, information literacy, Interdisciplinary Inquiry, Engaging with Big Questions and Major Works*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	Program Learning Outcomes (PLO) 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Gaining factual knowledge (terminology, classifications, methods, trends)*	3	95	85	H	M	M	H	H	H	L	H	H	H	-	H	-	-	-
CLO-2 :	*Rlate to their interests, abilities, career choices, and personal development*	3	95	85	H	M	M	H	H	H	L	H	H	H	-	H	-	-	-
CLO-3 :	*Develop a plan that demonstrates their responsibility for their own education*	3	95	85	H	M	M	H	H	H	L	H	H	H	-	H	-	-	-
CLO-4 :	*Explain the role of self-efficacy, personal goals, and motivation in improving academic life*	3	95	85	H	M	M	H	H	H	L	H	H	H	-	H	-	-	-
CLO-5 :	*Describe the behaviors and characteristics of an effective learner*	3	95	85	H	M	M	H	H	H	L	H	H	H	-	H	-	-	-
CLO-6 :	*Improve the Presentation Skills, Discussion Skills, Listening Skills, Argumentative Skills, Critical Thinking, Questioning*	3	95	85	H	M	M	H	H	H	L	H	H	H	-	H	-	-	-

Seminar Selection : List of Seminar Topics that are Approved to be learned by the student in the respective semester will be displayed by the Department Seminar Selection/Evaluation Committee. Student can pick any topic from that list.

Learning Assessment	
Seminar Preparation Materials & Report (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation Evaluation would be done by the Seminar Evaluation Committee formed by the Department.

Course Code	18ASP107L 18EEP107L	18AUP107L 18ECP107L	18BTP107L 18MEP107L	18CHP107L 18MHP107L	18CEP107L 18NTP107L	18CSP107L	Course Name	MINOR PROJECT	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
												0	0	2	1

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Learn responsible and professional way of working*
CLR-2 :	*Practice development-oriented approach to work*
CLR-3 :	*Enhance students' knowledge in one particular technology*
CLR-4 :	*Create awareness of the social, cultural, global and environmental responsibility as an engineer*
CLR-5 :	*Grow more empathetic, become systems thinkers, become explorers, problem-solvers.*
CLR-6 :	*Learn project management.*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1: Level of Thinking (Bloom)	2: Expected Proficiency (%)	3: Expected Attainment (%)	PLO 1: Engineering Knowledge	2: Problem Analysis	3: Design & Development	4: Analysis, Design, Research	5: Modern Tool Usage	6: Society & Culture	7: Environment & Sustainability	8: Ethics	9: Individual & Team Work	10: Communication	11: Project Mgt. & Finance	12: Life Long Learning	13: PSO - 1	14: PSO - 2	15: PSO - 3
CLO-1 :	*Develop capability to acquire and apply fundamental principles of engineering*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-2 :	*Become updated with all the latest changes in technological world*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-3 :	*Make deep connections between ideas*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-4 :	*Learn to take creative risks*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-5 :	*Be ready for the creative economy also engage in iterative thinking and divergent thinking*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-6 :	*Identify, formulate and model problems and find engineering solution based on a systems approach*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-

Project Work Selection : Project Work Titles for students would be finalized by the Department Project Work Evaluation Committee.

Learning Assessment	
MOOC Certification Obtained (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation Evaluation would be done by the Department Project Work Evaluation Committee formed by the Department.

Course Code	18ASP108L 18AUP108L 18BTP108L 18CHP108L 18CEP108L 18CSP108L 18EEP108L 18ECP108L 18MEP108L 18MHP108L 18NTP108L	Course Name	INTERNSHIP	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
							0	0	2	1

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Understanding of industry/organization customs and practices*
CLR-2 :	*Demonstrate professional skills that pertain directly to the internship experience*
CLR-3 :	*Demonstrate effective verbal and written communication skills, Allocate time effectively*
CLR-4 :	*Demonstrate effective listening skills*
CLR-5 :	*Participate well as a team member and build professional network*
CLR-6 :	*Build a record of work experience, Develop work habits and attitudes necessary for job success*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning 1	2	3	Program Learning Outcomes (PLO) 1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3
CLO-1 :	*Adapt effectively to changing conditions*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-2 :	*Demonstrate appropriate workplace attitudes*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-3 :	*Demonstrate individual responsibility*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-4 :	*Demonstrate effective management of personal behavior, ethics and attitudes*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-5 :	*Practice ethical standards appropriate to the internship site*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-6 :	*Explore career alternatives prior to graduation, Integrate theory and practice*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-

Internship Training Selection : List of Industries / Research Centre's for Internship Training for students would be finalized by the Department Internship/Industrial Training Committee.

Learning Assessment	
Internship Certification Obtained (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation Evaluation would be done by the Internship/Industrial Training Committee formed by the Department.

Course Code	18ASP109L 18AUP109L 18BTP109L 18CHP109L 18CEP109L 18CSP109L 18EEP109L 18ECP109L 18MEP109L 18MHP109L 18NTP109L	Course Name	PROJECT	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
							0	0	2	1

Course Learning Rationale (CLR):	The purpose of learning this course is to:
CLR-1 :	*Learn responsible and professional way of working*
CLR-2 :	*Practice development-oriented approach to work*
CLR-3 :	*Enhance students' knowledge in one particular technology*
CLR-4 :	*Create awareness of the social, cultural, global and environmental responsibility as an engineer*
CLR-5 :	*Grow more empathetic, become systems thinkers, become explorers, problem-solvers.*
CLR-6 :	*Learn project management.*

Course Learning Outcomes (CLO):	At the end of this course, learners will be able to:	Learning			Program Learning Outcomes (PLO)														
		1	2	3	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		Level of Thinking (Bloom)	Expected Proficiency (%)	Expected Attainment (%)	Engineering Knowledge	Problem Analysis	Design & Development	Analysis, Design, Research	Modern Tool Usage	Society & Culture	Environment & Sustainability	Ethics	Individual & Team Work	Communication	Project Mgt. & Finance	Life Long Learning	PSO - 1	PSO - 2	PSO - 3

CLO-5 :	*Be ready for the creative economy also engage in iterative thinking and divergent thinking*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-6 :	*Identify, formulate and model problems and find engineering solution based on a systems approach*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-

Project Work Selection : Project Work Titles for students would be finalized by the Department Project Work Evaluation Committee.

Learning Assessment	
Project Report (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation Evaluation would be done by the Department Project Work Evaluation Committee formed by the Department.

Course Code	18ASP110L 18AUP110L 18BTP110L 18CHP110L 18CEP110L 18CSP110L 18EEP110L 18ECP110L 18MEP110L 18MHP110L 18NTP110L	Course Name	SMESTER INTERNSHIP	Course Category	P	Project Work, Seminar, Internship in Industry / Higher Technical Institutions	L	T	P	C
							0	0	2	1

Course Learning Rationale (CLR):	*The purpose of learning this course is to:*
CLR-1 :	*Become job ready along with real corporate exposure*
CLR-2 :	*Increase self-confidence and helps in finding their own proficiency*
CLR-3 :	*Cultivate leadership ability and responsibility to perform or execute the given task*
CLR-4 :	*Inculcate learners hands on practice within a real job situation*
CLR-5 :	*Create awareness of the social, cultural, global and environmental responsibility as an engineer*
CLR-6 :	*Become able to identify, formulate and model problems and find engineering solution based on a systems approach*

Course Learning Outcomes (CLO):	*At the end of this course, learners will be able to:*	Learning 1 Level of Thinking (Bloom)	2 Expected Proficiency (%)	3 Expected Attainment (%)	PLO 1 Engineering Knowledge	2 Problem Analysis	3 Design & Development	4 Analysis, Design, Research	5 Modern Tool Usage	6 Society & Culture	7 Environment & Sustainability	8 Ethics	9 Individual & Team Work	10 Communication	11 Project Mgt. & Finance	12 Life Long Learning	13 PSO - 1	14 PSO - 2	15 PSO - 3
CLO-1 :	*Enhance capability to acquire and apply fundamental principles of engineering*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-2 :	*Become master in one's specialized technology*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-3 :	*Become updated with all the latest changes in technological world*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-4 :	*Demonstrate hands on practice within a real job situation*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-5 :	*Inculcate self-improvement through continuous professional development and life-long learning*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-
CLO-6 :	*Be a multi-skilled engineer with good technical knowledge, management, leadership and entrepreneurship skills*	3	95	85	H	M	M	H	H	H	L	H	H	H	H	H	-	-	-

Internship Training Selection : List of Industries / Research Centre's for Internship Training for students would be finalized by the Department Internship/Industrial Training Committee.

Learning Assessment	
Internship Certification Obtained (80% weightage)	Final Presentation (20% weightage)

Note : Final Presentation Evaluation would be done by the Internship/Industrial Training Committee formed by the Department.

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

(Deemed to be University u/s 3 of UGC Act, 1956)

Kattankulathur, Kancheepuram District-603203, Tamil Nadu, India
